TRANSMITTAL LETTER

Dear Sir:

Transmitted herewith are a Petition under 37 C.F.R. §1.47 for acceptance of a substitute DECLARATION for an application for patent when a joint inventor cannot be reached or located or refuses to sign, with attachments; a check for \$200 for the requisite fee for filing the Petition; and a return postcard in connection with the above-captioned patent application. If a Petition for extension of time is needed, this paper is to be considered such Petition.

The Commissioner is hereby authorized to charge any fee, including that submitted herewith if the attached check(s) is in the wrong amount or otherwise improper or missing, that may be due in connection with this and the attached papers, or with this application during its entire pendency to or to credit any overpayment to Deposit Account No. 06-1050. A duplicate of this sheet is enclosed.

Respectfully submitted,

PETITION UNDER 37 C.F.R. §1.47 FOR FILING AN APPLICATION FOR PATENT WHEN A JOINT INVENTOR CANNOT BE REACHED

Dear Sir:

This is a Petition to accept a substitute Declaration For Patent Application (hereinafter "DECLARATION") pursuant to 37 C.F.R. §1.47(a), when an inventor refuses to sign or cannot be located or reached. The above-identified application lists eleven joint inventors. All eleven joint inventors executed a DECLARATION in connection with the filing of this application. The original DECLARATION, date-stamped by the Office on May 15, 2002, is attached as Exhibit A. On the original DECLARATION, Inventor Thomas R. Caferro ("Caferro") lined through the address on the printed DECLARATION and printed his then-current address, but inadvertently did not initial and date the changes on the DECLARATION. This was brought to Applicant's attention in the Notice of Allowance. A substitute DECLARATION is required to correct this defect.

This Petition is filed in connection with the payment of the Issue Fee in response to a Notice of Allowance. Accompanying this Petition are:

- (1) a copy of the originally executed and filed DECLARATION (EXHIBIT A);
- (2) a copy of the Notice of Allowance, mailed August 31, 2006 (EXHIBIT B);
- (3) a copy of the executed substitute DECLARATION from the other inventors in this application: Robert I. Higuchi, Lin Zhi, Donald S. Karanewsky, Neelakandha S. Mani, Jyun-Hung Chen and Mark E. Adams (EXHIBIT C);
- (4) a STATEMENT OF FACTS by Frank J. Miskiel, an associate of the undersigned attorney involved with prosecuting this application, with accompanying Exhibits (EXHIBIT C);
- (5) a STATEMENT OF FACTS by Teresa Salazar-Fischer, a U.S. paralegal employed with the undersigned, with accompanying Exhibits (EXHIBIT E);
- (6) a check in the amount of \$200 for the requisite fee under 37 C.F.R. §1.17(g) for submitting this Petition; and
- (7) a return postcard.

REMARKS

A check in the amount of \$200 for the requisite fee under 37 C.F.R. §1.17(g) for submitting this Petition for filing a substitute DECLARATION for an application for patent by other than all the inventors accompanies this Petition. The Commissioner is authorized to charge any fees that may be due in connection with this paper or with this application to Deposit Account No. 06-1050. If a Petition for extension of time is required, this paper is to be considered such Petition.

Applicant hereby petitions pursuant to 37 C.F.R. §1.47(a) for acceptance of the substitute DECLARATION of the above-captioned application by other than all the inventors. The executed substitute DECLARATION is submitted under separate cover in connection with payment of the issue fee, responsive to the Notice of Allowance, mailed August 31, 2006. A copy of the executed substitute DECLARATION is attached hereto.

Under 37 C.F.R. §1.47(a), if a joint inventor refuses to join in an application for patent or cannot be found or reached after diligent effort, the application may be made by the other inventor[s]. The above-captioned application names as inventors, Robert I. Higuchi, Lin Zhi, Donald S. Karanewsky, Anthony W. Thompson, Thomas R. Caferro, Neelakandha S. Mani, Jyun-Hung Chen, Marquis L. Cummings, James P. Edwards, Mark E. Adams and Charlotte L.F. Deckhut. While diligent attempts have been made to obtain the signatures on the substitute DECLARATION of all of the joint inventors, despite diligent and repeated efforts, it has not been possible to locate and/or obtain the signatures of all of the inventors. Six of the eleven joint inventors have executed the substitute DECLARATION. Of the five joint inventors who have not executed the substitute DECLARATION, Marquis L. Cummings ("Cummings"), James P. Edwards ("Edwards"), and Charlotte L.F. Deckhut ("Deckhut") have not responded to requests to sign the DECLARATION, and Thomas Caferro ("Caferro") and Anthony W. Thompson ("Thompson") could not be located. Also, provided as part of this Petition are a Statement of Frank J. Miskiel and a Statement of Teresa Salazar-Fischer documenting the efforts to obtain all of the signatures.

As described and documented in the attached Statements and Exhibits, diligent efforts were made to locate and/or contact inventors Cummings, Edwards, Caferro, Thompson and Deckhut. Despite these efforts, neither the undersigned nor the Assignee has been able to locate and/or contact joint inventors Cummings, Edwards, Caferro and Thompson. Therefore, inventors Cummings, Edwards, Caferro and Thompson cannot be found or reached after diligent effort. Although inventor Deckhut was contacted and inventor Deckhut indicated that

she would execute and return the substitute DECLARATION, she has not done so. Based on the conduct of inventor Deckhut, we have concluded that inventor Deckhut refuses to sign the substitute DECLARATION.

Accordingly, in light of these efforts, and provision of the executed substitute DECLARATION of the other joint inventors (see EXHIBIT C), the fee set forth in 37 C.F.R. §1.17(g), and the last known address of each of the non-signing inventors Cummings, Edwards, Caferro, Thompson and Deckhut, favorable review of this Petition and Exhibits, and acceptance of the substitute DECLARATION in the above-captioned application without signature of joint inventors/applicants Cummings, Edwards, Caferro, Thompson and Deckhut, are respectfully requested.

Determination of Patent Term Adjustment under 35 U.S.C. 154 (b) (application filed on or after May 29, 2000)

The Patent Term Adjustment to date is 190 day(s). If the issue fee is paid on the date that is three months after the mailing date of this notice and the patent issues on the Tuesday before the date that is 28 weeks (six and a half months) after the mailing date of this notice, the Patent Term Adjustment will be 190 day(s).

If a Continued Prosecution Application (CPA) was filed in the above-identified application, the filing date that determines Patent Term Adjustment is the filing date of the most recent CPA.

Applicant will be able to obtain more detailed information by accessing the Patent Application Information Retrieval (PAIR) WEB site (<http://pair.uspto.gov>).

Any questions regarding the Patent Term Extension or Adjustment determination should be directed to the Office of Patent Legal Administration at (571)-272-7702. Questions relating to issue and publication fee payments should be directed to the Customer Service Center of the Office of Patent Publication at 1-(888)-786-0101 or (571)-272-4200.

Applicant is respectfully requested to supply an amended declaration because the handwritten alterations to the oath by inventor Caferro were not properly initialed and dated.

An Examiner's Amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 C.F.R. §1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the Issue Fee.

In claim 46, the term "claim 45" was amended to read
-- claim 1 --.

In claim 56 at line 108, the term -- and -- was added at the end of the line.

In claim 56 at line 111, the term "a pharmaceutically acceptable salt" was amended to read -- pharmaceutically acceptable salts --.

In claim 57 at line 25, the term -- and -- was added at the end of the line.

In claim 57 at line 28, the term "a pharmaceutically acceptable salt" was amended to read -- pharmaceutically acceptable salts --.

In claim 58 at line 67, the entire line was deleted in favor of the term -- m is 1; --.

Claim 75 was cancelled.

In claim 108 at line 4, the term "and o" was amended to read
-- and --.

Authorization for this Examiner's Amendment was given in a telephone interview with Frank Miskiel on August 21, 2006

**STATEMENT OF FACTS BY FRANK J. MISKIEL IN SUPPORT OF A
PETITION UNDER 37 C.F.R. §1.47 FOR FILING AN APPLICATION FOR PATENT
WHEN A JOINT INVENTOR CANNOT BE REACHED OR LOCATED
OR REFUSES TO SIGN**

Dear Sir:

I am an attorney involved with the prosecution of the above-captioned application. Under my direction, a substitute Declaration For Patent Application (hereinafter "DECLARATION") was prepared and mailed by Teresa Salazar-Fischer, a paralegal employed with the undersigned at the firm. The DECLARATION was sent, on October 23, 2006, to Ms. Michele P. Travis, our contact paralegal employed by Ligand Pharmaceuticals, Inc., the Assignee of the above-captioned patent application, in order to obtain inventor signatures. The DECLARATION was provided with copies of the application and amendments made during prosecution of the application, to the above listed inventors. Michele P. Travis informed me that inventors Thomas R. Caferro (hereinafter "Caferro"), Anthony W. Thompson (hereinafter "Thompson"), Marquis L. Cummings (hereinafter "Cummings") and James P. Edwards (hereinafter "Edwards") are no longer employed by Ligand Pharmaceuticals, and that Ligand Pharmaceuticals has been attempting, but has not been able to contact or locate Caferro, Thompson, Cummings and Edwards. I also was unsuccessful in previous attempts to locate inventors Caferro and Thompson in connection with another matter.

On October 23, 2006, I instructed Ms. Salazar-Fischer to prepare copies of the substitute DECLARATION, the application and the amendments made during prosecution of the application and to send these documents via U.S. Certified Mail, Return Receipt Requested to each of inventors Caferro, Thompson, Cummings and Edwards using the addresses we had on file. Copies of the original specification, amendments made during prosecution and the substitute DECLARATION, which were mailed to each inventor, are provided as Exhibits 2-5.

Caferro

The last known mailing address for inventor Caferro is:

Thomas R. Caferro
101 Thorton Green Place
Holly Springs, NC 27540

On or around November 13, 2006, the package sent to inventor Caferro was returned in its original envelope to our office. The package was stamped "undeliverable as addressed, return to sender" and included the three-letter acronym "UTF" handwritten on the package. A copy of the stamped envelope from the package mailed to Caferro is provided as Exhibit 7. The acronym "UTF" is used by the Post Office to indicate "Unable to Forward," as evidenced by the entry for "UTF" in "The Free Dictionary by Farlex," available on-line at <http://acronyms.thefreedictionary.com/utf>. A copy of the definition for "UTF" is provided as Exhibit F.

On November 27, 2006 I contacted Ms. Travis, of Ligand Pharmaceuticals, Inc. and requested phone numbers for inventor Caferro. I was informed that there were no phone numbers in their inventor database for inventor Caferro. On November 27, 2006, I performed electronic searches on the Internet to locate inventor Caferro. I used the search engines provided by FreeKnowX.com and ZabaSearch.com to locate an address or phone number for inventor Caferro.

The FreeKnowX search engine provided an address for inventor Caferro. The address provided by the search engine is identical to the last known mailing address for inventor Caferro. No phone number was provided. The search engine for ZabaSearch returned an address and a phone number for inventor Caferro. The address provided by the search engine is identical to the last known mailing address for inventor Caferro. I called the number provided nine times at various times during the day and evening, and the phone was never answered. I also searched the North Carolina Voter Database and obtained information that suggests that inventor Caferro is actively living in Holly Springs, NC, but no contact information was available. Copies of the results of the searches are provided as Exhibit G.

As evidenced above, I have not been able to locate a current address for inventor Caferro nor have I been able to contact inventor Caferro by telephone. Accordingly, in light of these efforts, I conclude that inventor Caferro cannot be located or reached in connection with executing the substitute DECLARATION.

Thompson

The last known mailing address for inventor Thompson is:

Anthony W. Thompson
4179 Third Avenue, Apt. 211
San Diego, CA 92103

On or around November 13, 2006, the package sent to inventor Thompson was returned in its original envelope to our office. The package was returned stamped "undeliverable as addressed, return to sender" and included the three-letter acronym "FOE" handwritten on the package. A copy of the stamped envelope from the package mailed to Thompson is provided as Exhibit 8. The acronym "FOE" is used by the Post Office to indicate "Forwarding Order Expired," as evidenced by the entry for "FOE" in "The Free Dictionary by Farlex," available on-line at <http://acronyms.thefreedictionary.com/foe>. A copy of the definition for "FOE" is provided as Exhibit H.

On November 27, 2006 I contacted Ms. Travis, of Ligand Pharmaceuticals, Inc. and requested a phone number for inventor Thompson. I was informed that there was no phone number in their inventor database for inventor Thompson. On November 27, 2006, I performed electronic searches on the Internet to locate inventor Thompson. I used the search engines provided by FreeKnowX.com and ZabaSearch.com to locate an address or phone number for inventor Thompson.

The FreeKnowX search engine provided no information for inventor Thompson. The search engine for ZabaSearch provided seventeen listings for "Anthony W. Thompson," only one of which was an address in San Diego, CA. I called the number provided for the San Diego address and that number is no longer in service. Copies of the results of the searches are provided as Exhibit I.

As evidenced above, I have not been able to locate a current address for inventor Thompson nor have I been able to contact inventor Thompson by telephone. Accordingly, in light of these efforts, I conclude that inventor Thompson cannot be located or reached in connection with executing the substitute DECLARATION.

Cummings

The last known mailing address for inventor Cummings is:

Marquis L. Cummings
917 Bracero Road
Encinitas, CA 92024

On or around November 15, 2006, the Return Receipt postcard from the package sent to inventor Cummings was returned to our office. The package was delivered to the last

known mailing address for inventor Cummings. The postcard was signed by "Leeanna Cummings." Thus, the package was not signed by inventor Cummings. A copy of the postcard is provided as Exhibit 6.

By November 27, 2006, inventor Cummings had not returned an executed substitute DECLARATION. On November 27, 2006 I contacted Ms. Travis, of Ligand Pharmaceuticals, Inc. and requested a phone number for inventor Cummings. I was informed that there was no phone number in their inventor database for inventor Cummings. On November 27, 2006, I performed electronic searches on the Internet to locate inventor Cummings. I used the search engines provided by FreeKnowX.com and ZabaSearch.com to locate an address or phone number for inventor Cummings.

The FreeKnowX search engine provided no information for inventor Cummings. The search engine for ZabaSearch provided four listings for "Marquis L. Cummings," none of which was an address in San Diego, CA. No phone numbers were provided. Copies of the results of the searches are provided as Exhibit J.

As evidenced above, I have not been able to contact inventor Cummings by telephone. Although I have evidence that the package addressed to inventor Cummings was delivered to the last known mailing address, as evidenced by the signature on the returned Certified Mail Return Receipt postcard by someone with the same last name as inventor Cummings, I have not received an executed substitute DECLARATION from inventor Cummings. I conclude that, either the package delivered to the last known address was never delivered to inventor Cummings, or in the alternative, based on the conduct of inventor Cummings, since an executed substitute DECLARATION was not received from inventor Cummings, that inventor Cummings refuses to sign the substitute DECLARATION.

Edwards

The last known mailing address for inventor Edwards is:

James P. Edwards
8723 Hesby Court
San Diego, CA 92129

On or around November 6, 2006, the Return Receipt postcard from the package sent to inventor Edwards was returned to our office. The package was delivered to the last known mailing address for inventor Edwards. The postcard was signed by "Jackie Edwards." The package was not signed for by inventor Edwards. A copy of the postcard is provided as Exhibit 9.

By November 27, 2006, inventor Edwards had not returned an executed substitute DECLARATION. On November 27, 2006, I contacted Ms. Travis, of Ligand Pharmaceuticals,

Inc. and requested a phone number for inventor Edwards. I was informed that there was no phone number in their inventor database for inventor Edwards. On November 27, 2006, I performed electronic searches on the Internet to locate inventor Edwards. I used the search engines provided by FreeKnowX.com and ZabaSearch.com to locate an address or phone number for inventor Edwards.

The FreeKnowX search engine provided no information for inventor Edwards. The search engine for ZabaSearch provided fourteen listings for "James P. Edwards," one of which was an address that matched the last known mailing address. Copies of the results of the searches are provided as Exhibit K. I called the number provided and left messages on the answering machine, but no one at that phone number has returned my calls.

As evidenced above, I have not been able to contact inventor Edwards by telephone. Although I have evidence that the package addressed to inventor Edwards was delivered to the last known mailing address, as evidenced by the signature on the returned Certified Mail Return Receipt postcard by someone with the same last name as inventor Edwards, I have not received an executed substitute DECLARATION from inventor Edwards. I conclude that, either the package delivered to the last known address was never delivered to inventor Edwards, or in the alternative, based on the conduct of inventor Edwards, since an executed substitute DECLARATION was not received from inventor Edwards, that inventor Edwards refuses to sign the substitute DECLARATION.

Deckhut

The last known address of inventor Deckhut is:

Charlotte L.F. Deckhut
3105 Kalmia Street
San Diego, CA 92104

On November 27, 2006, I was informed by Ms. Travis, of Ligand Pharmaceuticals, Inc., that the substitute DECLARATION, original application and amendments were delivered to inventor Charlott L.F. Deckhut by FedEx but an executed substitute DECLARATION has not been returned. I asked Ms. Travis for a phone number, but was informed that there was no phone number in their inventor database for inventor Deckhut.

I used the ZabaSearch search engine to locate a telephone number for inventor Deckhut. The search engine for ZabaSearch provided a number of listings for "Charlotte L. Deckhut," one of which was an address that matched the last known mailing address. Copies of the results of the search are provided as Exhibit L. I called the number provided and was able to speak with inventor Deckhut on November 28, 2006. Ms. Deckhut indicated that she

would sign the DECLARATION and return it via FedEx in the envelope that was provided. The DECLARATION did not arrive on November 29. I called Ms. Deckhut again on November 29, 2006 and left a message on her voicemail requesting that she review the material sent and after review, that she execute the substitute DECLARATION and return it to us in the FedEx envelope provided. I asked that she call me if she had any questions and provided her my direct line. The DECLARATION was not received by November 30, inventor Deckhut did not return my call and repeated attempts to contact inventor Deckhut have been unsuccessful.

Although Ms. Deckhut stated that she would review the materials and return the executed substitute DECLARATION, she has not yet done so. I conclude that, based on the conduct of inventor Deckhut, that she refuses to sign the substitute DECLARATION. We will provide a copy of the executed substitute DECLARATION should inventor Deckhut execute and return the substitute DECLARATION.

Executed Substitute Declaration

On November 29, 2006, a letter from paralegal Michele P. Travis (on behalf of the Applicant) enclosing a substitute DECLARATION executed by joint inventors Robert I. Higuchi, Lin Zhi, Donald S. Karanewsky, Neelakandha S. Mani, Jyun-Hung Chen and Mark E. Adams was received via Federal Express (see Exhibit C).

Conclusion

In summary, in view of all of the actions taken as described above and documented in the attached Exhibits, it is believed that diligent efforts were made to locate and/or contact inventors Cummings, Edwards, Caferro, Thompson and Deckhut. Despite these efforts, I have not been able to locate and/or contact joint inventors Cummings, Edwards, Caferro, Thompson. Therefore, inventors Cummings, Edwards, Caferro and Thompson cannot be found or contacted after diligent effort. Although I have been successful in speaking with inventor Deckhut, Ms. Deckhut stated that she would review the materials and return the executed substitute DECLARATION, but has yet to do so. I have concluded, based on the conduct of inventor Deckhut, that she refuses to sign the substitute DECLARATION.

Accordingly, in light of these efforts, and the provision of the executed substitute DECLARATION of the other joint inventors (see EXHIBIT C), the fee set forth in 37 C.F.R. §1.17(g), and the last known address of each of the non-signing inventors Cummings, Edwards, Caferro, Thompson and Deckhut, favorable review of this Petition and acceptance of the substitute DECLARATION in the above-captioned application without signature of

STATEMENT OF FACTS BY TERESA SALAZAR-FISCHER

I, TERESA SALAZAR-FISCHER, declare as follows:

1. I have been employed by Fish & Richardson P.C. since July 19, 2005. During the time in question I was the U.S. Patent Paralegal assigned to the above-captioned application.

2. On October 23, 2006, I was instructed by Frank J. Miskiel, an associate working on the above-captioned matter, to prepare a substitute DECLARATION for execution by the inventors (see Exhibit 1). A copy of the substitute DECLARATION, application as filed, and amendments made during prosecution were forwarded to paralegal Michele P. Travis, acting on behalf of Ligand Pharmaceuticals, Inc. (herein after "Applicant").

3. On October 30, 2006, I was instructed by Frank J. Miskiel to send a copy of the application as filed, copies of the amendments made during prosecution and the substitute DECLARATION, to each of Marquis L. Cummings (hereinafter "Cummings"), James P. Edwards (hereinafter "Edwards"), Thomas Caferro (hereinafter "Caferro") and Anthony W. Thompson (hereinafter "Thompson"), using the address for each that we had on file, via U.S. Certified Mail, Return Receipt Requested service.

4. On October 30, 2006, I mailed by U.S. Certified Mail a copy of the application as filed, copies of the amendments and the substitute DECLARATION to each of inventors Cummings, Edwards, Caferro and Thompson (see Exhibits 2 - 5).

5. On or around November 6, 2006, the Return Receipt Postcard from the package sent to inventor Edwards was returned. The package was signed for by Jackie Edwards (see Exhibit 6).

6. On or around November 13, 2006, the packages sent to inventors Caferro and Thompson were returned to our office marked "undeliverable as addressed, return to sender" by the U.S. Postal Service (see Exhibit 7 and Exhibit 8).

7. On or around November 15, 2006, the Return Receipt Postcard from the package sent to inventor Cummings was returned. The package was signed for by Leeanna Cummings (see Exhibit 9).

8. On November 29, 2006, a letter was received via Federal Express from paralegal Michele P. Travis (on behalf of the Applicant) enclosing a substitute DECLARATION executed by joint inventors Robert I. Higuchi, Lin Zhi, Donald S. Karanewsky, Neelakandha S. Mani, Jyun-Hung Chen and Mark E. Adams (see Exhibit 10).

I hereby declare that all statements made herein of my own knowledge are true and that all statements made on information and belief are believed to be true; and further that these statements were made with the knowledge that willful false statements and the like so made are punishable by fine or imprisonment, or both, under Section 1001 of Title 18 of the United States Code and that such willful false statements may jeopardize the validity of the application or any patents issued thereon.

Dear Mr. Caferro:

Enclosed is a Declaration for Patent Application for your execution. The above-captioned patent application was prepared and filed with the U.S. Patent and Trademark Office on February 22, 2002. This patent application has been deemed allowable. The Examiner has required a replacement Declaration because the hand-annotated address changes made by one of the inventors was not initialed on the originally submitted Declaration.

We also have enclosed a copy of the application as filed with the U.S. Patent and Trademark Office for your review. Also enclosed are copies of the Amendments that have been filed during prosecution of this patent application. Please review the application and the amendments.

After reviewing the application and the amendments, please sign and date the enclosed Declaration for Patent Application and return the executed document to our office as soon as possible. For your convenience we have enclosed a stamped, self-addressed envelope for use in returning the executed document to us.

In the event that the enclosed Declaration for Patent Application is incorrect in anyway, please mark through the error(s), type or print the correction(s) above it, and then initial and date in the margin beside the correction(s).

We would appreciate the prompt execution and return of the enclosed Declaration for Patent Application. If you have any questions, please do not hesitate to contact our office.

Sincerely,

Stephanie Seidman

**TRICYCLIC QUINOLINONE AND TRICYCLIC QUINOLINE
ANDROGEN RECEPTOR MODULATOR COMPOUNDS AND METHODS**

Related Application

5 The present application claims the benefit of priority to U.S. Provisional Application No. 60/271,115, filed on February 23, 2001 which is incorporated by reference in its entirety.

Field of the Invention

10 This invention relates to non-steroidal compounds that are modulators (*i.e.* agonists and antagonists) of androgen receptors and to methods for making and using such compounds.

Background of the Invention

15 Intracellular receptors (IRs) form a class of structurally-related genetic regulators scientists have named "ligand dependent transcription factors." R.M. Evans, *Science*, 240:889 (1988). Steroid receptors are a recognized subset of the IRs, including the progesterone receptor (PR) androgen receptor (AR), estrogen receptor (ER), glucocorticoid
20 receptor (GR) and mineralocorticoid receptor (MR). Regulation of a gene by such factors requires both the IR itself and a corresponding ligand, which has the ability to selectively bind to the IR in a way that affects gene transcription.

 A compound that binds an IR and mimics the effect of the native ligand is referred to as an "agonist", while a compound that inhibits the effect of the native ligand is called an
25 "antagonist." The term "modulators" refers to compounds that are agonists, partial agonists or antagonists.

 The effectiveness of known modulators of steroid receptors is often tempered by their undesired side-effect profile, particularly during long-term administration. For example, the effectiveness of progesterone and estrogen agonists, such as norgestrel and diethylstilbesterol,
30 respectively, as female birth control agents must be weighed against the increased risk of breast cancer and heart disease to women taking such agents. Similarly, the progesterone

antagonist, mifepristone (RU486), if administered for chronic indications, such as uterine fibroids, endometriosis and certain hormone-dependent cancers, could lead to homeostatic imbalances in a patient due to its inherent cross-reactivity as a GR antagonist. Accordingly, identification of compounds that have good specificity for one or more steroid receptors, but
5 have reduced or no cross-reactivity for other steroid or intracellular receptors, would be of significant value in the treatment of male and female hormone responsive diseases.

A group of quinolinone and coumarin analogs having a fused ring system of the aryl, piperidine, pyrrolidine, or indoline series have been described as androgen modulators. See U. S. Patent No. 5,696,130; Int. Patent Appl. WO 97/49709; L.G. Hamann, *et al. J. Med.*

Summary of the Invention

The present invention is directed to androgen receptor modulator compounds. This
20 invention is also directed to pharmaceutical compositions containing such compounds as well as methods of using such compounds and pharmaceutical compositions for modulating processes mediated by steroid receptors. More particularly, the invention relates to non-steroidal compounds that are high-affinity, high-specificity agonists, partial agonists (*i.e.*, partial activators and/or tissue-specific activators) and antagonists for androgen receptors
25 (AR). Also provided are methods of making such compounds and pharmaceutical compositions, as well as intermediates used in their synthesis.

Detailed Description of the Invention

In accordance with the present invention, we have developed novel compounds,
10 compositions and methods of preparing non-steroidal compounds that are AR modulators.
Specifically, we have developed agonists, partial agonists (*i.e.*, partial activators and/or tissue-
specific activators) and antagonists for androgen receptors and methods of preparing these
compounds and compositions. Compounds of the present invention may be high affinity,
high specificity agonists, partial agonists, or antagonists for androgen receptors.

15 In accordance with the present invention and as used herein, the following structure
definitions are provided for nomenclature purposes. Furthermore, in an effort to maintain
consistency in the naming of compounds of similar structure but differing substituents, the
compounds described herein are named according to the following general guidelines. The
numbering system for the location of substituents on such compounds is also provided.

A 1*H*, 6*H*-pyrrolo[1',2':4,5][1,4]oxazino[2,3-*f*]quinolin-2-one is represented by the following structure:

10

In accordance with the present invention and as used herein, the following terms are defined with the following meanings, unless explicitly stated otherwise.

The term "alkyl," alone or in combination, refers to an optionally substituted straight-chain or branched-chain alkyl radical having from 1 to about 12 carbon atoms. The term also includes substituted straight-chain or branched-chain alkyl radicals having from 1 to about 6 carbon atoms as well as those having from 1 to about 4 carbon atoms. Examples of alkyl radicals include methyl, ethyl, n-propyl, isopropyl, n-butyl, isobutyl, sec-butyl, tert-butyl, tert-amyl, pentyl, hexyl, heptyl, octyl and the like.

The term "alkenyl," alone or in combination, refers to an optionally substituted straight-chain or branched-chain hydrocarbon radical having one or more carbon-carbon double-bonds and having from 2 to about 18 carbon atoms. The term also includes substituted straight-chain or branched-chain alkyl radicals having one or more carbon-carbon double bonds and having from 2 to about 6 carbon atoms as well as those having from 2 to

about 4 carbon atoms. Examples of alkenyl radicals include ethenyl, propenyl, 1,4-butadienyl and the like.

The term "alkynyl," alone or in combination, refers to an optionally substituted straight-chain or branched-chain hydrocarbon radical having one or more carbon-carbon
5 triple-bonds and having from 2 to about 12 carbon atoms. The term also includes substituted straight-chain or branched-chain alkyl radicals having one or more carbon-carbon triple bonds and having from 2 to about 6 carbon atoms as well as those having from 2 to about 4 carbon atoms. Examples of alkynyl radicals include ethynyl, propynyl, butynyl and the like.

The term "heteroalkyl" refers to alkyl groups, as described above, in which one or
10 more skeletal atoms are oxygen, nitrogen, sulfur or combinations thereof. The term heteroalkyl also includes alkyl groups in which one 1 to about 6 skeletal atoms are oxygen, nitrogen, sulfur or combinations thereof, as well as those in which 1 to 4 skeletal atoms are oxygen, nitrogen, sulfur or combinations thereof and those in which 1 to 2 skeletal atoms are oxygen, nitrogen, sulfur or combinations thereof.

15 The term "alkoxy," alone or in combination, refers to an alkyl ether radical wherein the term alkyl is defined as above. Examples of alkoxy radicals include methoxy, ethoxy, n-propoxy, isopropoxy, n-butoxy, iso-butoxy, sec-butoxy, tert-butoxy and the like.

The term "aryloxy," alone or in combination, refers to an aryl ether radical wherein the term aryl is defined as below. Examples of aryloxy radicals include phenoxy, benzyloxy
20 and the like.

The term "alkylthio," alone or in combination, refers to an alkyl thio radical wherein the term alkyl is defined as above.

The term "arylthio," alone or in combination, refers to an aryl thio radical wherein the term aryl is defined as below.

25 The term "oxo" refers to =O.

The term "aryl," alone or in combination, refers to an optionally substituted aromatic ring system. The term aryl includes monocyclic aromatic rings, polyaromatic rings and polycyclic aromatic ring systems containing from six to about twenty carbon atoms. The term

aryl also includes monocyclic aromatic rings, polyaromatic rings and polycyclic ring systems containing from 6 to about 12 carbon atoms, as well as those containing from 6 to about 10 carbon atoms. The polyaromatic and polycyclic aromatic rings systems may contain from two to four rings. Examples of aryl groups include, without limitation, phenyl, biphenyl,
5 naphthyl and anthryl ring systems.

The term "heteroaryl" refers to optionally substituted aromatic ring systems containing from about five to about 20 skeletal ring atoms and having one or more heteroatoms such as, for example, oxygen, nitrogen and sulfur. The term heteroaryl also includes optionally substituted aromatic ring systems having from 5 to about 12 skeletal ring atoms, as well as
10 those having from 5 to about 10 skeletal ring atoms. The term heteroaryl may include five- or six-membered heterocyclic rings, polycyclic heteroaromatic ring systems and polyheteroaromatic ring systems where the ring system has two, three or four rings. The terms heterocyclic, polycyclic heteroaromatic and polyheteroaromatic include ring systems containing optionally substituted heteroaromatic rings having more than one heteroatom as
15 described above (*e.g.*, a six membered ring with two nitrogens), including polyheterocyclic ring systems of from two to four rings. The term heteroaryl includes ring systems such as, for example, furanyl, benzofuranyl, chromenyl, pyridyl, pyrrolyl, indolyl, quinolinyl, N-alkyl pyrrolyl, pyridyl-N-oxide, pyrimidoyl, pyrazinyl, imidazolyl, pyrazolyl, oxazolyl, benzothiophenyl, purinyl, indolizinyl, thienyl and the like.

20 The term "heteroarylalkyl" refers to a C₁-C₄ alkyl group containing a heteroaryl group, each of which may be optionally substituted.

The term "heteroarylthio" refers to the group -S-heteroaryl.

The term "acyloxy" refers to the ester group -OC(O)-R, where R is hydrogen, alkyl, alkenyl, alkynyl, aryl, or arylalkyl, wherein the alkyl, alkenyl, alkynyl and arylalkyl groups
25 may be optionally substituted.

The term "carboxy esters" refers to -C(O)OR where R is alkyl, aryl or arylalkyl, wherein the alkyl, aryl and arylalkyl groups may be optionally substituted.

The term "carboxamido" refers to

where R and R' each independently is selected from the group of hydrogen, alkyl, aryl and arylalkyl, wherein the alkyl, aryl and arylalkyl groups may be optionally substituted.

5 The term "cycloalkyl", alone or in combination, refers to a monocyclic, bicyclic or tricyclic alkyl radical wherein each cyclic moiety has from 3 to about 8 carbon atoms. Examples of cycloalkyl radicals include cyclopropyl, cyclobutyl, cyclopentyl, cyclohexyl and the like.

10 The term "arylalkyl," alone or in combination, refers to an alkyl radical as defined above in which one hydrogen atom is replaced by an aryl radical as defined above, such as, for example, benzyl, 2-phenylethyl and the like.

The terms haloalkyl, haloalkenyl, haloalkynyl and haloalkoxy include alkyl, alkenyl, alkynyl and alkoxy structures, as described above, that are substituted with one or more fluorines, chlorines, bromines or iodines, or with combinations thereof.

15 The terms cycloalkyl, aryl, arylalkyl, heteroaryl, alkyl, alkynyl, alkenyl, haloalkyl and heteroalkyl include optionally substituted cycloalkyl, aryl, arylalkyl, heteroaryl, alkyl, alkynyl, alkenyl, haloalkyl and heteroalkyl groups.

The term "carbocycle" includes optionally substituted, saturated or unsaturated, three- to eight-membered cyclic structures in which all of the skeletal atoms are carbon.

20 The term "heterocycle" includes optionally substituted, saturated or unsaturated, three- to eight-membered cyclic structures in which one or more skeletal atoms is oxygen, nitrogen, sulfur, or combinations thereof.

The term "acyl" includes alkyl, aryl, heteroaryl, arylalkyl or heteroarylalkyl substituents attached to a compound *via* a carbonyl functionality (*e.g.*, -CO-alkyl, -CO-aryl, -CO-arylalkyl or -CO-heteroarylalkyl, *etc.*).

25 "Optionally substituted" groups may be substituted or unsubstituted. The substituents of an "optionally substituted" group may include, without limitation, one or more substituents

independently selected from the following groups or designated subsets thereof: alkyl, alkenyl, alkynyl, heteroalkyl, haloalkyl, haloalkenyl, haloalkynyl, cycloalkyl, aryl, heteroaryl, arylalkyl, heteroarylalkyl, alkoxy, aryloxy, haloalkoxy, amino, alkylamino, dialkylamino, alkylthio, arylthio, heteroarylthio, oxo, carboxyesters, carboxamido, acyloxy, hydrogen, F, Cl, Br, I, CN, NO₂, NH₂, N₃, NHCH₃, N(CH₃)₂, SH, SCH₃, OH, OCH₃, OCF₃, CH₃, CF₃, C(O)CH₃, CO₂CH₃, CO₂H, C(O)NH₂, OR⁹, SR⁹ and NR¹⁰R¹¹. An optionally substituted group may be unsubstituted (e.g., -CH₂CH₃), fully substituted (e.g., -CF₂CF₃), monosubstituted (e.g., -CH₂CH₂F) or substituted at a level anywhere in-between fully substituted and monosubstituted (e.g., -CH₂CF₃).

10 The term "halogen" includes F, Cl, Br and I.

The term "mediate" means affect or influence. Thus, for example, conditions mediated by an androgen receptor are those in which an androgen receptor plays a role. Androgen receptors are known to play a role in conditions including, for example, acne, male-pattern baldness, sexual dysfunction, impotence, wasting diseases, hirsutism, hypogonadism, prostatic hyperplasia, osteoporosis, cancer cachexia, and hormone-dependent cancers.

15 The term "selective" refers to compounds that display reactivity towards a particular receptor (e.g., an androgen receptor) without displaying cross-reactivity towards another receptor (e.g., glucocorticoid receptor). Thus, for example, selective compounds of the present invention may display reactivity towards androgen receptors without displaying cross-reactivity towards glucocorticoid receptors.

20 Compounds of the present invention are represented by those having the formula:

20 alkyl, haloalkyl, heteroalkyl, aryl, heteroaryl and arylalkyl groups may be optionally substituted;

R^{11} and R^{12} each independently is selected from the group of hydrogen, $C_1 - C_8$ alkyl, $C_1 - C_8$ haloalkyl, $C_1 - C_8$ heteroalkyl, aryl, heteroaryl and arylalkyl, wherein the alkyl, haloalkyl, heteroalkyl, aryl, heteroaryl and arylalkyl groups may be optionally substituted;

25 R^{13} is selected from the group of $C_1 - C_8$ alkyl, $C_1 - C_8$ haloalkyl, $C_1 - C_8$ heteroalkyl, $C_2 - C_8$ alkenyl, $C_2 - C_8$ alkynyl, $C_3 - C_8$ cycloalkyl, aryl, heteroaryl, arylalkyl and heteroarylalkyl, wherein the alkyl, haloalkyl, heteroalkyl, alkenyl, alkynyl, cycloalkyl, aryl, heteroaryl, arylalkyl and heteroarylalkyl groups may be optionally substituted;

R^{16} is selected from the group of hydrogen, $C_1 - C_8$ alkyl, $C_1 - C_8$ haloalkyl, $C_1 - C_8$ heteroalkyl, COR^{17} , CO_2R^{17} and $CONR^{12}R^{17}$, wherein the alkyl, haloalkyl and heteroalkyl groups may be optionally substituted;

R^{17} is selected from the group of hydrogen, $C_1 - C_8$ alkyl, $C_1 - C_8$ haloalkyl and $C_1 - C_8$ heteroalkyl, wherein the alkyl, haloalkyl and heteroalkyl groups may be optionally substituted;

R^{18} is selected from the group of hydrogen, F, Br, Cl, I, CN, $C_1 - C_8$ alkyl, $C_1 - C_8$ haloalkyl, $C_1 - C_8$ heteroalkyl, OR^{16} , $NR^{16}R^{17}$, SR^{16} , CH_2R^{16} , COR^{17} , CO_2R^{17} , $CONR^{16}R^{17}$, SOR^{17} and SO_2R^{17} , wherein the alkyl, haloalkyl and heteroalkyl groups may be optionally substituted;

R^{19} is selected from the group of hydrogen, $C_1 - C_8$ alkyl, $C_1 - C_8$ haloalkyl, $C_1 - C_8$ heteroalkyl, $C_2 - C_8$ alkenyl, $C_2 - C_8$ alkynyl, $C_3 - C_8$ cycloalkyl, aryl, heteroaryl, arylalkyl and heteroarylalkyl, wherein the alkyl, haloalkyl, heteroalkyl, alkenyl, alkynyl, cycloalkyl, aryl, heteroaryl, arylalkyl and heteroarylalkyl groups may be optionally substituted;

m is selected from the group of 0, 1 and 2;

n is selected from the group of 0, 1 and 2;

V is selected from the group of O and S;

W is selected from the group of O, $S(O)_n$, NH, $N\{R^{13}\}$, $N\{C(Y)R^{11}\}$ and $N\{SO_2R^{11}\}$;

X and Z each independently is selected from the group of O, $S(O)_n$, NH, $N\{R^{11}\}$, $N\{C(Y)R^{11}\}$, $N\{SO_2R^{12}\}$ and $N\{S(O)R^{12}\}$; and

Y is selected from the group of O, S, $N\{R^{19}\}$ and $N\{OR^{19}\}$;

and pharmaceutically acceptable salts thereof.

In one aspect, the present invention provides compounds represented by formula I through IV. In another aspect, the present invention provides a pharmaceutical composition comprising an effective amount of an AR modulating compound of formula I through IV shown above, wherein R^1 through R^{13} , R^{16} through R^{19} , m , n , V , W , X , Y , and Z are as described above.

In another aspect, the present invention provides a method of modulating processes mediated by ARs by administering to a patient an effective amount of a compound of formula I through IV shown above, wherein R^1 through R^{13} , R^{16} through R^{19} , m, n, V, W, X, Y, and Z are as described above. In one aspect, the modulation is activation, while in another aspect, 5 the modulation is inhibition. In each case, the method involves administering to a patient a pharmaceutically effective amount of a compound of formula I through IV shown above, wherein R^1 through R^{13} , R^{16} through R^{19} , m, n, V, W, X, Y, and Z are as described above.

With regard to the foregoing variables, the inventors contemplate any combination of the Markush groups as set forth above and as described in the following table.

The compounds of the present invention can be synthesized as pharmaceutically acceptable salts for incorporation into various pharmaceutical compositions. As used herein, pharmaceutically acceptable salts include, but are not limited to, hydrochloric, hydrobromic, hydroiodic, hydrofluoric, sulfuric, citric, maleic, acetic, lactic, nicotinic, succinic, oxalic, phosphoric, malonic, salicylic, phenylacetic, stearic, pyridine, ammonium, piperazine, diethylamine, nicotinamide, formic, urea, sodium, potassium, calcium, magnesium, zinc, lithium, cinnamic, methylamino, methanesulfonic, picric, tartaric, triethylamino, dimethylamino, tris(hydroxymethyl)aminomethane and the like and suitable combinations of

any two or more thereof. Additional pharmaceutically acceptable salts are known to those skilled in the art.

AR agonist, partial agonist and antagonist compounds (including compounds with tissue-selective AR modulator activity) of the present invention may be useful in the treatment of process(es) mediated by androgen receptor(s), including acne (antagonist), male-pattern baldness (antagonist), male hormone replacement therapy (agonist), sexual dysfunction (agonist), wasting diseases (agonist), hirsutism (antagonist), stimulation of hematopoiesis (agonist), hypogonadism (agonist), prostatic hyperplasia (antagonist), osteoporosis (agonist), male contraception (agonist), impotence (agonist), cancer cachexia (agonist), various hormone-dependent cancers (*e.g.*, prostate cancer (antagonist), breast cancer and the like), process(es) requiring anabolic agents (agonist) and the like. It is understood by those of skill in the art that a partial agonist may be used where agonist activity is desired, or where antagonist activity is desired, depending upon the AR modulator profile of the particular partial agonist.

It is understood by those skilled in the art that while the compounds of the present invention will typically be employed as selective agonists, partial agonists or antagonists, that there may be instances where a compound with a mixed steroid receptor profile is desirable. For example, use of a PR agonist (*i.e.*, progestin) in female contraception often leads to the undesired effects of increased water retention and acne flare-ups. In this instance, a compound that is primarily a PR agonist, but also displays some AR and MR modulating activity, may prove useful. Specifically, the mixed MR effects would be useful to control water balance in the body, while the AR effects would help to control any acne flare-ups that occur.

Furthermore, it is understood by those skilled in the art that the compounds of the present invention, including pharmaceutical compositions and formulations containing these compounds, can be used in a wide variety of combination therapies to treat the conditions and diseases described above. Thus, the compounds of the present invention can be used in combination with other hormones and other therapies, including, without limitation,

chemotherapeutic agents such as cytostatic and cytotoxic agents, immunological modifiers such as interferons, interleukins, growth hormones and other cytokines, hormone therapies, surgery and radiation therapy.

Representative AR modulator compounds (i.e., agonists and antagonists) according to

5 the present invention include: (3*R*)-2,3,4,7-Tetrahydro-3-methyl-10-(trifluoromethyl)-8*H*-[1,4]oxazino[2,3-*f*]quinolin-8-one (Compound **101**); (3*R*)-2,3,4,7-Tetrahydro-3,4-dimethyl-10-(trifluoromethyl)-8*H*-[1,4]oxazino[2,3-*f*]quinolin-8-one (Compound **102**); (3*R*)-4-Ethyl-2,3,4,7-tetrahydro-3-methyl-10-(trifluoromethyl)-8*H*-[1,4]oxazino[2,3-*f*]quinolin-8-one (Compound **103**); (3*R*)-2,3,4,7-Tetrahydro-3-methyl-4-(2,2,2-trifluoroethyl)-10-

Compounds of the present invention, comprising classes of heterocyclic nitrogen compounds and their derivatives, can be obtained by routine chemical synthesis. *e.g.*, by

modification of the heterocyclic nitrogen compounds disclosed or by a total synthesis approach.

The sequences of steps for several general schemes to synthesize the compounds of the present invention are shown below. In each of the schemes the R groups (e.g., R¹, R², etc.) correspond to the specific substitution patterns noted in the Examples. However, it will be understood by those skilled in the art that other functionalities disclosed herein at the indicated positions of compounds of formulas I through IV also comprise potential substituents for the analogous positions on the structures within the schemes.

Scheme I

A synthesis of an 8*H*-[1,4]oxazino[2,3-*f*]quinolin-8-one compound (*e.g.*, structures 9 and 11), is depicted in Schemes I and II. The process of Scheme I begins with the Knorr cyclization of a phenylenediamine derivative, for example, 5-chloro-1,3-phenylenediamine (structure 1), with a β -ketoester, or its corresponding hydrate or hemiacetal, for example ethyl 4,4,4-trifluoroacetoacetate, to afford the corresponding (1*H*)-quinolin-2-one. See G, Jones, *Comprehensive Heterocyclic Chemistry*, Katritzky, A. R.; Rees, C. W., eds. Pergamon, New York, 1984. Vol. 2, chap. 2.08, pp 421-426, the disclosure of which is herein incorporated by reference. Reduction of the halide group could be achieved by chemical reduction, with, for example, a metal catalyst, for example, 10% Pd-C, in a hydrogen atmosphere, to afford a compound of structure 2. Conversion of the aniline to a phenol could be effected by treatment of structure 2 with a diazotizing agent, for example, sodium nitrite in sulfuric acid, to afford a compound of structure 3. Bromination of the phenol with a brominating reagent, for example, *N*-bromosuccinimide, in the presence of a base, for example, diisopropylamine, affords a compound of structure 4. See S. Fujisaki, *et. al.*, *Bull. Chem. Soc. Jpn.* 1993, 66, 1576-1579, the disclosure of which is herein incorporated by reference.

Selective protection of the phenolic oxygen could be achieved by treatment of structure 4 with an alkyl halide, for example, benzyl bromide, in the presence of a base, for example, cesium fluoride, to afford the corresponding ether. Protection of the pyridone ring, with, for example isopropyl iodide, mediated by a base, for example, cesium fluoride, affords the corresponding imino ether (structure 5). Selective hydrolysis of the phenolic ether could be accomplished by acidic hydrolysis, with, for example, a 1:1 mixture of methanesulfonic acid and acetic acid, to afford a phenol of structure 6.

The following transformations are illustrated in Scheme II. Alkylation of the phenolic oxygen was accomplished by treatment of the phenol with a protected amino alcohol, for example, (*R*)-*N*-*t*-boc-alinol, under Mitsunobu conditions, for example, triphenylphosphine and diisopropyl azodicarboxylate, in the presence of a base, for example, *N*-methylmorpholine, to afford the corresponding Mitsunobu product. Removal of the *t*-butoxycarbonyl protecting group can be accomplished by acidic hydrolysis, with, for example, trifluoroacetic acid, to afford a compound of structure 7 (Scheme II). Closure of the amine to the aromatic halide can be achieved by treatment of compound with a transition

metal, for example $\text{Pd}_2(\text{dba})_3$ in the presence of a ligand, for example, BINAP, and a base, for example, sodium *t*-butoxide, to afford a compound of structure 8. See S. Wagaw, *et. al.*, *J. Am. Chem. Soc.* **1997**, *119*, 8451-8458, the disclosure of which is herein incorporated by reference. Treatment of a compound of structure 8 with an acid, for example hydrochloric acid in acetic acid, at elevated temperatures, affords an 8*H*-[1,4]oxazino[2,3-*f*]quinolin-8-one of structure 9. Alternatively, treatment of a compound of structure 8 with an aldehyde or its corresponding hydrate or hemiacetal, for example, trifluoroacetaldehyde hemiacetal, in the presence of a reducing agent, for example, sodium cyanoborohydride, in a carboxylic acid, for example, trifluoroacetic acid, affords a compound of structure 10. Alternatively, alkylation could be achieved by alkylation of structure 8 with an alkyl halide, for example, allyl bromide, mediated by a base, for example potassium carbonate, to afford a compound of structure 10. Treatment of a compound of structure 10 with an acid, for example hydrochloric acid in acetic acid, affords an 8*H*-[1,4]oxazino[2,3-*f*]quinolin-8-one, a compound of structure 11. Alternatively, treatment of a compound of structure 9 with an aldehyde or its corresponding hydrate or hemiacetal, for example, cyclopropylmethylcarboxaldehyde, in the presence of a reducing agent, for example, sodium cyanoborohydride, in a carboxylic acid, for example, acetic acid, affords a compound of structure 11.

An enantiomer of structures 9 or 11, or a racemic mixture may be obtained by the synthetic route as described in **Scheme II**, by starting with the enantiomer of the β -aminoalcohol as shown (*e.g.*, an (*S*)- β -amino alcohol), or a racemic mixture of the β -aminoalcohol shown (*e.g.*, a (\pm)- β -amino alcohol. Accordingly, an (*S*)- β -amino alcohol, employed in **Scheme II**, produces an (*S*)-quinolinone; an (*R*)- β -amino alcohol, employed in **Scheme II**, produces an (*R*)-quinolinone; and a racemic mixture of the β -amino alcohol, employed in **Scheme II**, produces a racemic mixture of the corresponding quinolinone. A racemic mixture of quinolinones could be separated into its corresponding enantiomers by separation on chiral HPLC with, for example, a chirapak AS column eluted with hexanes:ethanol.

Scheme III

The asymmetric synthesis in **Scheme III** begins with the chemo- and regioselective *N*-alkylation of a β-aminoalcohol, either as a single enantiomer (*R* or *S*) or its racemate, for example, (*R*)-prolinol, onto a 3,4-dihalonitrobenzene, for example, 3,4-difluoronitrobenzene, mediated by a base, for example, sodium bicarbonate, to afford an optically pure arylamino alcohol (e.g., structure 14). Benzoxazine compounds (e.g., structure 15), may then be formed by cyclization of the *N*-alkyl substituted amino alcohol compounds (e.g., structure 14) by treatment with a base such as sodium hydride. Reduction of nitro benzoxazine compounds (e.g., structure 15) with a reducing agent, for example, zinc and calcium chloride affords an amino benzoxazine compound (e.g., structure 16). Treatment of an amino benzoxazine with a β-keto ester, or its corresponding hydrate, for example ethyl 4,4,4-trifluoroacetate, at

elevated temperatures, affords the corresponding acetanilide. Treatment of the acetanilide with an acid, for example, sulfuric acid, affords an optically pure quinolinone compound (e.g., structures **17** and **18**). An enantiomer of structure **17**, or a racemic mixture may be obtained by the synthetic route as described in **Scheme III**, by starting with the enantiomer of the β -aminoalcohol as shown (e.g., an (*S*)- β -amino alcohol), or a racemic mixture of the β -aminoalcohol shown (e.g., a (\pm)- β -amino alcohol. Accordingly, an (*S*)- β -amino alcohol, employed in **Scheme III**, produces an (*S*)-quinolinone; an (*R*)- β -amino alcohol, employed in **Scheme III**, produces an (*R*)-quinolinone; and a racemic mixture of the β -amino alcohol, employed in **Scheme III**, produces a racemic mixture of the corresponding quinolinone.

10

Scheme IV

A synthesis of an 8H-[1,4]oxazino[2,3-f]quinoline (e.g., structures **19** and **20**), is depicted in **Scheme IV**. The process of **Scheme IV** begins by treatment of a quinolinone with a halogenating agent, for example, phosphorus oxychloride, to afford a compound of structure **19**. Substitution of the halide can be accomplished by treatment with a nucleophile, for example, sodium methoxide in methanol, to afford a compound of structure **20**.

15

Scheme V

The asymmetric synthesis of Scheme V begins with the chemo- and regioselective *N*-alkylation of a β -aminoalcohol, either as a single enantiomer (*R* or *S*) or its racemate, for example, (*R*)-2-amino-1-butanol, onto a 3,4-dihalogenitrobenzene, for example, 3,4-difluoronitrobenzene, to afford an optically pure arylamino alcohol (e.g., Structure **21**). Treatment of amino alcohol compounds such as Structure **21** with an aldehyde or the corresponding hydrate or hemiacetal, for example, trifluoroacetaldehyde ethyl hemiacetal, in

the presence of an acid catalyst, for example p-toluenesulfonic acid, affords an optically pure oxazolidine compound (e.g., structure 22). Treatment of an oxazolidine compound such as structure 22 with a reducing agent, for example, triethylsilane, in the presence of an acid, for example, titanium tetrachloride, affords an *N*-alkyl substituted amino alcohol compound (e.g., structure 23). Benzoxazine compounds (e.g., structure 24), may then be formed by cyclization of the *N*-alkyl substituted amino alcohol compounds (e.g., structure 23) by treatment with a base such as sodium hydride. Reduction of nitro benzoxazine compounds (e.g., structure 24) with a reducing agent, for example, palladium on carbon under a hydrogen atmosphere, affords an aminobenzoxazine compound (e.g., structure 25). Treatment of a compound of structure 25 with an acylating agent, for example trimethylacetyl chloride, in the presence of a base, for example, pyridine, affords a compound of structure 26. R^b may be, in addition to *t*-butyl, an aryl or a sterically hindered alkyl substituent. Alternatively, it may be *t*-butoxy, aryloxy, or a sterically hindered alkoxy substituent. Regioselective lithiation of a compound of structure 26 with a strong base, for example, *t*-butyllithium followed by quenching with an acylating agent, for example, ethyl trifluoroacetate, affords a compound of structure 27. The base may be an alternative organolithium reagent, for example, *sec*-butyllithium or *n*-butyllithium. Treatment of a compound of structure 27 with a Horner-Emmons reagent, for example, (carbethoxymethylene)triphenylphosphorane produces a compound of structure 28. Annulation of a compound of structure 28 to the pyridone ring may be accomplished by treatment of a compound of structure 28 with an acid, for example hydrochloric acid in acetic acid, to afford a compound of structure 29.

An enantiomer of structure 29, or a racemic mixture, may be obtained by the synthetic route as described in Scheme V, by starting with the enantiomer of the β -aminoalcohol as shown (e.g., an (*S*)- β -amino alcohol), or a racemic mixture of the β -aminoalcohol shown (e.g., a (+)- β -amino alcohol. Accordingly, an (*S*)- β -amino alcohol, employed in Scheme V, produces an (*S*)-quinolinone; an (*R*)- β -amino alcohol, employed in Scheme V, produces an (*R*)-quinolinone; and a racemic mixture of the β -amino alcohol, employed in Scheme V, produces a racemic mixture of the corresponding quinolinone.

Scheme VI

- An alternative racemic route to nitrobenzoxazine compounds of structure **24** (Scheme VI) begins with the *N*-alkylation of a 2-amino-5-nitrophenol nitrogen by treatment with an aldehyde, its corresponding hydrate or hemiacetal, with for example, trifluoroacetaldehyde hydrate in the presence of a reducing agent, for example, sodium cyanoborohydride, in an acid, for example trifluoroacetic acid. This procedure affords an *N*-alkylated compound of structure **30**. This can be further transformed by alkylation with a haloketone, for example, 2-bromobutanone, mediated by a base, for example, potassium carbonate, followed by treatment with a reducing agent, for example, sodium cyanoborohydride, in an acid, for example acetic acid, to afford a benzoxazine compound (*e.g.*, structure **24**).

Scheme VII

Scheme VII describes a route to compounds of structure 34. A compound of structure 5 is treated with an amine, amide, or carbamate, for example butylamine, and a transition metal, for example $\text{Pd}_2(\text{dba})_3$, in the presence of a ligand, for example BINAP, and a base, for example, cesium carbonate, to afford a compound of structure 31. Removal of the benzyl group with a reducing agent, for example palladium on carbon under a hydrogen atmosphere, affords a compound of structure 32. A compound of structure 32 is treated with an α -haloester, for example, ethyl bromoacetate, in the presence of a base, for example potassium carbonate, to afford a compound of structure 33. A compound of structure 33 is hydrolyzed with an acid, for example, concentrated HCl in acetic acid, to afford a compound of structure 34.

The compounds of the present invention also include racemates, stereoisomers and mixtures of said compounds, including isotopically-labeled and radio-labeled compounds.

Such isomers can be isolated by standard resolution techniques, including fractional crystallization and chiral column chromatography.

As noted above, the steroid modulator compounds of the present invention can be combined in a mixture with a pharmaceutically acceptable carrier to provide pharmaceutical compositions useful for treating the biological conditions or disorders noted herein in mammalian and, more particularly, in human patients. The particular carrier employed in these pharmaceutical compositions may take a wide variety of forms depending upon the type of administration desired. Suitable administration routes include enteral (*e.g.*, oral), topical, suppository and parenteral (*e.g.*, intravenous, intramuscular and subcutaneous).

In preparing the compositions in oral liquid dosage forms (*e.g.*, suspensions, elixirs and solutions), typical pharmaceutical media, such as water, glycols, oils, alcohols, flavoring agents, preservatives, coloring agents and the like can be employed. Similarly, when preparing oral solid dosage forms (*e.g.*, powders, tablets and capsules), carriers such as starches, sugars, diluents, granulating agents, lubricants, binders, disintegrating agents and the like may be employed. Due to their ease of administration, tablets and capsules represent a desirable oral dosage form for the pharmaceutical compositions of the present invention.

For parenteral administration, the carrier will typically include sterile water, although other ingredients that aid in solubility or serve as preservatives may also be included.

Furthermore, injectable suspensions may also be prepared, in which case appropriate liquid carriers, suspending agents and the like may be employed.

For topical administration, the compounds of the present invention may be formulated using bland, moisturizing bases, such as ointments or creams. Examples of suitable ointment bases are petrolatum, petrolatum plus volatile silicones, lanolin and water in oil emulsions such as Eucerin™, available from Beiersdorf (Cincinnati, Ohio). Examples of suitable cream bases are Nivea™, available from Beiersdorf (Cincinnati, Ohio), cold cream (USP), Purpose Cream™, available from Johnson & Johnson (New Brunswick, New Jersey), hydrophilic ointment (USP) and Lubriderm™, available from Warner-Lambert (Morris Plains, New Jersey).

The pharmaceutical compositions and compounds of the present invention will generally be administered in the form of a dosage unit (*e.g.*, tablet, capsule, *etc.*). The compounds of the present invention generally are administered in a daily dosage of from about 1 $\mu\text{g/kg}$ of body weight to about 500 mg/kg of body weight. Typically, the compounds
5 of the present invention are administered in a daily dosage of from about 10 $\mu\text{g/kg}$ to about 250 mg/kg of body weight. Most often, the compounds of the present invention are administered in a daily dosage of from about 20 $\mu\text{g/kg}$ to about 100 mg/kg body weight. As recognized by those skilled in the art, the particular quantity of pharmaceutical composition according to the present invention administered to a patient will depend upon a number of
10 factors, including, without limitation, the biological activity desired, the condition of the patient and the patient's tolerance for the drug.

The compounds of this invention also have utility when labeled (*e.g.*, radio-labeled, isotopically-labeled and the like) as ligands for use in assays to determine the presence of AR in a cell background or extract. They are particularly useful due to their ability to selectively
15 activate androgen receptors and can therefore be used to determine the presence of such receptors in the presence of other steroid receptors or related intracellular receptors. Thus, the invention provides methods of determining the presence of androgen receptors (AR) in a cell or cell extract.

These invention methods comprise contacting the cell or cell extract with the
20 compounds of the present invention which have been labeled and testing the contacted cell or cell extract to determine the presence of AR. Testing can be accomplished *via* testing for activation of androgen receptor(s) (*e.g.*, *via* elevated presence of the product of androgen mediated process(es)), *via* separation of the bound compound/receptor combination and the like, which techniques are known to those of skill in the art.

25 Due to the selective specificity of the compounds of this invention for steroid receptors, these compounds can be used to purify samples of steroid receptors *in vitro*. Such purification can be carried out by mixing samples containing steroid receptors with one or more of the compounds of the present invention so that the compounds bind to the receptors.

of choice and then isolating the bound ligand/receptor combination by separation techniques which are known to those of skill in the art. These techniques include column separation, filtration, centrifugation, tagging and physical separation and antibody complexing, among others. Thus, the invention also provides methods for purifying samples of steroid receptors
5 *in vitro*. Invention methods comprise contacting a sample containing steroid receptors with one or more of the compounds of the present invention so that the compounds bind to the steroid receptors to form a bound compound/receptor combination and separating out the bound compound/receptor combination.

The compounds and pharmaceutical compositions of the present invention can be used
10 in the treatment of the diseases and conditions described herein. In this regard, the compounds and compositions of the present invention may prove particularly useful as modulators of male sex steroid-dependent diseases and conditions (*e.g.*, process(es) mediated by androgen receptors) such as the treatment of acne, male-pattern baldness, sexual dysfunction, wasting diseases, hirsutism, hypogonadism, prostatic hyperplasia, osteoporosis,
15 impotence, cancer cachexia and various hormone-dependent cancers, including prostate and breast cancer. The compounds of the present invention may also prove useful in male hormone replacement therapy, stimulation of hematopoiesis, male contraception and as anabolic agents.

As utilized herein, the term "modulate" includes the ability of a modulator for a
20 member of the androgen receptor family to either directly (by binding to the receptor as a ligand) or indirectly (as a precursor for a ligand or an inducer which promotes production of ligand from a precursor) induce expression of gene(s) maintained under hormone expression control, or to repress expression of gene(s) maintained under such control. Thus, both inhibitory effects on androgen receptors and activating effects on androgen receptors are
25 contemplated within the scope of modulation.

The compounds of the present invention may be extremely potent activators of AR, displaying 50% maximal activation of AR (*e.g.*, activation of AR, determined by measurement of luciferase production levels compared to levels achieved by

dihydrotestosterone (DHT)) at a concentration of less than 100 nM (Cotransfection assay concentration), at a concentration of less than 50 nM, at a concentration of less than 20 nM, or even at a concentration of 10 nM or less. (See, for example, Biological Examples.)

In addition, selected compounds of the present invention may be extremely potent
5 antagonists of AR, displaying 50% maximal inhibition of AR (*e.g.*, inhibition of AR, determined by measurement of luciferase production levels compared to levels achieved by dihydrotestosterone (DHT)) at a concentration of less than 100 nM (Cotransfection assay concentration), at a concentration of less than 50 nM, at a concentration of less than 20 nM, or even at a concentration of 10 nM or less. (See, for example, Biological Examples.)

10 Selective compounds of the present invention generally do not display undesired cross-reactivity with other steroid receptors, as is seen with the compound mifepristone (RU486; Roussel Uclaf), a known PR antagonist that displays an undesirable cross reactivity on GR and AR, thereby limiting its use in long-term, chronic administration.

The invention will be further illustrated by reference to the following non-limiting
15 Examples.

EXAMPLE 1

(3R)-2,3,4,7-Tetrahydro-3-methyl-10-(trifluoromethyl)-8H-[1,4]oxazino[2,3-f]quinolin-8-one
(Compound 101, Structure 9 of Scheme II, where R¹, R³, R⁴, R⁵, = H, R² = trifluoromethyl,
20 R⁶ = Me)

5-Amino-7-chloro-3,4-dihydro-4-hydroxy-4-(trifluoromethyl)-1H-quinolin-2-one: To a solution of 5-chloro-1,3-phenylenediamine (15.0 g, 0.105 mol) in 70 mL ethanol was added ethyl 4,4,4-trifluoroacetoacetate (20.4 g, 0.111 mol), then the mixture was heated at reflux for 18 h. The solvent was removed under reduced pressure until the product began to precipitate.
25 The material was allowed to crystallize for 2 h, whereupon it was filtered and rinsed with cold ether to afford 10.9 g (37%) of 5-amino-7-chloro-3,4-dihydro-4-hydroxy-4-(trifluoromethyl)-1H-quinolin-2-one, a tan solid. The filtrate was concentrated until solid began to precipitate.

and afforded an additional 3.0 g (10%). ¹H NMR (400 MHz, acetone-d₆) δ 11.0 (broad s, 1H), 9.64 (s, 1H), 7.42 (t, 1H, *J* = 8.1), 6.99 (d, 1H, *J* = 8.1), 6.90 (s, 1H), 6.79 (d, 1H, *J* = 8.1).

5 5-Amino-3,4-dihydro-4-hydroxy-4-(trifluoromethyl)-1*H*-quinolin-2-one (Structure 2 of Scheme I, where R¹, R⁷, R⁸ = H, R² = trifluoromethyl): A mixture of 5-amino-7-chloro-3,4-dihydro-4-hydroxy-4-(trifluoromethyl)-1*H*-quinolin-2-one (8.0 g, 28 mmol), KOAc (5.6 g, 57 mmol) and 10% Pd-C (4.0 g) in 200 mL ethanol was stirred under an atmosphere of hydrogen for 2 h. The mixture was filtered through Celite and concentrated under reduced pressure. The resultant solid was dissolved in EtOAc (250 mL) and washed sequentially with
10 saturated NaHCO₃ (200 mL) and brine (200 mL), dried over MgSO₄, filtered and concentrated to afford 7.0 g (100%) of 5-amino-3,4-dihydro-4-hydroxy-4-(trifluoromethyl)-1*H*-quinolin-2-one, a foamy tan solid. ¹H NMR (400 MHz, acetone-d₆) δ 9.16 (broad s, 1H), 6.99 (t, 1H, *J* = 8.0), 6.44 (broad s, 1H), 6.39 (d, 1H, *J* = 7.9), 6.26 (d, 1H, *J* = 7.9), 5.44 (broad s, 2H), 3.09 (d, AB, *J* = 17.0), 2.93 (d, AB, *J* = 17.0).

15 5-Hydroxy-4-(trifluoromethyl)-1*H*-quinolin-2-one (Structure 3 of Scheme I, where R¹, R⁷, R⁸ = H, R² = trifluoromethyl): To a solution of 5-amino-3,4-dihydro-4-hydroxy-4-(trifluoromethyl)-1*H*-quinolin-2-one (6.0 g, 24 mmol) in 100 mL 4.8 M H₂SO₄ was added a solution of NaNO₂ (1.85 g, 26.8 mmol) in 6 mL water at 0°C. The reaction mixture became deep red. This solution was transferred to 120 mL 10M H₂SO₄ preheated to 145°C. The
20 mixture was heated at 145°C for 0.5 h, then poured into 400 g of ice water. The crude solid was adsorbed onto silica gel and eluted with 9:1 CH₂Cl₂:MeOH to afford 4.6 g (82%) of 5-hydroxy-4-(trifluoromethyl)-1*H*-quinolin-2-one, an off-white solid. ¹H NMR (400 MHz, acetone-d₆) δ 11.0 (broad s, 1H), 9.64 (s, 1H), 7.42 (t, 1H, *J* = 8.1), 6.99 (d, 1H, *J* = 8.1), 6.90 (s, 1H), 6.79 (d, 1H, *J* = 8.1).

25 6-Bromo-5-hydroxy-4-(trifluoromethyl)-1*H*-quinolin-2-one (Structure 4 of Scheme I, where R¹, R⁷, R⁸ = H, R² = trifluoromethyl): To a solution of 5-hydroxy-4-(trifluoromethyl)-1*H*-quinolin-2-one (4.38 g, 19.1 mmol) and diisopropylamine (14 mL, 100 mmol) in 100 mL EtOAc was added a solution of *N*-bromosuccinimide (3.74 g, 21.0 mmol) in 70 mL EtOAc in

-10°C over 30 min. The reaction mixture was stirred for 1 h, then acidified to pH 1 by the addition of 6M HCl. The mixture was extracted with EtOAc (3 x 150 mL) and the combined organic layers were washed with brine (200 mL), dried over MgSO₄, filtered and concentrated under reduced pressure. Recrystallization from chloroform:hexanes afforded 4.5 g (77%) of
5 6-bromo-5-hydroxy-4-(trifluoromethyl)-1*H*-quinolin-2-one, an off-white solid. *R*_f 0.4 (1:1 EtOAc:hexanes); ¹H NMR (400 MHz, acetone-d₆) δ 11.1 (broad s, 1H), 8.75 (broad s, 1H), 7.76 (d, 1H, *J* = 8.8), 7.04 (d, 1H, *J* = 8.8), 6.98 (s, 1H).

5-Benzoyloxy-6-bromo-4-(trifluoromethyl)-1*H*-quinolin-2-one: To a suspension of 6-bromo-5-hydroxy-4-(trifluoromethyl)-1*H*-quinolin-2-one (9.42 g, 30.6 mmol) and CsF
10 (13.9 g, 91.7 mmol) in 102 mL DMF was added benzyl bromide (6.54 g, 38.2 mmol) dropwise. After 24 h, the mixture was poured into 0.1 M NaHSO₄ (500 mL) and extracted with EtOAc (1:1). The aqueous layer was reextracted with EtOAc (500 mL) and the combined organic layers were washed sequentially with water (500 mL), brine (300 mL), dried over MgSO₄, filtered and concentrated to a slurry. The mixture was cooled to 0°C,
15 filtered and the resultant solids washed with cold EtOAc to afford 7.26 g (60%) of 5-benzoyloxy-6-bromo-4-(trifluoromethyl)-1*H*-quinolin-2-one, a tan solid. *R*_f 0.26 (7:3 hexanes:acetone); ¹H NMR (400 MHz, acetone-d₆) δ 11.3 (broad s, 1H), 7.91 (d, 1H, *J* = 9.0, 1H), 7.61 (d, 2H, *J* = 7.3), 7.43 (t, 2H, *J* = 7.2), 7.25-7.35 (m, 1H), 7.32 (d, 1H, *J* = 9.0), 7.06 (s, 1H), 5.10 (s, 1H).

20 5-Benzoyloxy-6-bromo-2-isopropoxy-4-(trifluoromethyl)quinoline (Structure 5 of Scheme 1, where R¹, R⁷, R⁸ = H, R² = trifluoromethyl): To a suspension of 5-benzoyloxy-6-bromo-4-(trifluoromethyl)-1*H*-quinolin-2-one (11.7 g, 29.4 mmol) and CsF (17.8 g, 117 mmol) in 150 mL DMF was added isopropyl iodide (19.9 g, 117 mmol). After 28 h, the mixture was partitioned between EtOAc (500 mL) and water (250 mL) and the aqueous layer
25 was extracted with EtOAc. The combined organic layers were washed with water (200 mL), brine (100 mL), dried over MgSO₄, filtered and concentrated to afford 13 g (100%) of 5-benzoyloxy-6-bromo-2-isopropoxy-4-(trifluoromethyl)quinoline. ¹H NMR (400 MHz,

CDCl₃) δ 7.85 (d, 1H, J = 9.0), 7.55-7.65 (m, 3H), 7.38-7.48 (m, 2H), 7.32-7.38 (m, 1H), 7.31 (s, 1H), 5.54 (sept, 1H, J = 6.2), 5.06 (s, 2H), 1.42 (d, 6H, J = 6.2).

6-Bromo-5-hydroxy-2-isopropoxy-4-(trifluoromethyl)quinoline (Structure 6 of Scheme I, where R¹, R⁷, R⁸ = H, R² = trifluoromethyl): A solution of 5-benzyloxy-6-bromo-2-isopropoxy-4-(trifluoromethyl)quinoline (13.5 g, 30.8 mmol) in 31 mL methanesulfonic acid and 31 mL acetic acid was stirred at rt for 10 h, whereupon it was poured in water (500 mL), neutralized with K₂CO₃ (ca. 75 g) and extracted with EtOAc (3 x 200 mL). The combined organic layers were washed with brine (200 mL), dried over MgSO₄, filtered and concentrated. Flash chromatography (2%-5% EtOAc:hexanes, gradient elution) afforded 9.9 g (92%) of 6-bromo-5-hydroxy-2-isopropoxy-4-(trifluoromethyl)quinoline, a yellow-brown oil. ¹H NMR (400 MHz, CDCl₃) δ 7.71 (d, 1H, J = 9.1), 7.38 (d, 1H, J = 9.1), 6.23 (s, 1H), 5.53 (sept, 1H, J = 6.2), 1.41 (d, 6H, J = 6.2).

General Method 1: Mitsunobu reaction of a phenol with a protected aminoalcohol. To a solution of the bromophenol substrate (1 equiv), the *N*-Boc-protected aminoalcohol (1.6 equiv), triphenylphosphine (1.6 equiv) and *N*-methylmorpholine (10 equiv) in dry THF (0.1-0.2 M) was added diisopropyl azodicarboxylate (1.6 equiv) dropwise, producing an orange color. After 5 min, the ice bath was removed and the reaction was stirred at rt for 2 – 16 h. The reaction mixture was poured into water (40 mL/mmol), neutralized with 1.0 M HCl and extracted with EtOAc (2 x 25 mL/mmol). The combined extracts were washed with 0.1 M HCl (20 mL/mmol) and brine (20 mL/mmol), dried over MgSO₄, filtered, concentrated. Column chromatography (hexane:EtOAc) afforded the desired aryl ether.

(2'*R*)-6-Bromo-5-[(2'-*t*-butoxycarbonylamino)-1'-propoxy]-2-isopropoxy-4-(trifluoromethyl)quinoline (Structure 7 of Scheme II, where R¹, R³, R⁴, R⁵, = H, R² = trifluoromethyl, R⁶ = Me): The compound was prepared according to General Method 1 (EXAMPLE 1) from 6-bromo-5-hydroxy-2-isopropoxy-4-(trifluoromethyl)quinoline (0.50 g, 1.43 mmol), (*R*)-*N*-Boc-alinol (400 mg, 2.28 mmol), triphenylphosphine (600 mg, 2.28 mmol) and diisopropyl azodicarboxylate (0.45 mL, 2.28 mmol) in 0.6 mL *N*-methylmorpholine in 14 mL dry THF to afford 484 mg (67%) of (2'*R*)-6-bromo-5-[(2'-*t*-butoxycarbonylamino)-1'-

propoxy]-2-isopropoxy-4-(trifluoromethyl)quinoline after flash chromatography (100% hexanes to 6:1 hexanes/EtOAc, gradient elution). ¹H NMR (500 MHz, CDCl₃) δ 7.80 (d, *J* = 9.3, 1H), 7.56 (d, *J* = 8.8, 1H), 7.30 (s, 1H), 5.53 (sept, *J* = 6.4, 1H), 4.95 (bs, 1H), 4.18 (m, 1H), 3.98 (m, 1H), 3.94 (m, 1H), 1.46 (s, 9H), 1.41 (d, *J* = 6.4, 6H), 1.37 (d, *J* = 6.8, 3H).

5 **General Method 2:** Hydrolysis of a *t*-butoxycarbonyl protected amine. To a solution of the carbamate substrate in CH₂Cl₂ (0.2 M) was added an equal volume of TFA and the solution was stirred at rt for 1 h. The mixture was poured into water (100 mL/mmol), neutralized with 6 M NaOH and extracted with EtOAc (2 x 50 mL/mmol). The combined extracts were washed sequentially with saturated NaHCO₃ (50 mL/mmol) and brine
10 (50 mL/mmol), dried over MgSO₄, filtered and concentrated. Column chromatography (CH₂Cl₂/MeOH) afforded the desired free amine.

(2'*R*)-6-Bromo-5-(2'-amino-1'-propoxy)-2-isopropoxy-4-(trifluoromethyl)quinoline:

This compound was prepared according to General Method 2 (EXAMPLE 1) from (2'*R*)-6-bromo-5-[(2'-*t*-butoxycarbonylamino)-1'-propoxy]-2-isopropoxy-4-(trifluoromethyl)quinoline
15 (480 mg, 0.95 mmol) in 5 mL CH₂Cl₂ and 5 mL TFA to afford 346 mg (90%) of (2'*R*)-6-bromo-5-(2'-amino-1'-propoxy)-2-isopropoxy-4-(trifluoromethyl)quinoline. ¹H NMR (500 MHz, CDCl₃) δ 7.81 (d, *J* = 8.8, 1H), 7.57 (d, *J* = 9.3, 1H), 7.30 (s, 1H), 5.53 (m, 1H), 3.93 (m, 1H), 3.84 (m, 1H), 3.66 (m, 1H), 2.33 (bs, 2H), 1.41 (d, *J* = 6.4, 3H), 1.40 (d, *J* = 6.4, 3H), 1.22 (d, *J* = 6.4, 3H).

20 **General Method 3:** Palladium catalyzed coupling of an amine with an aryl bromide. To a mixture of (±)-2,2'-bis(diphenylphosphino)-1,1'-binaphthyl (4-10 mol %), Pd₂(dba)₃ (2-5 mol%), sodium *t*-butoxide (1.4 equiv) was added a solution of the amino aryl bromide (1 equiv) in toluene (0.1-0.2 M). The reddish solution was heated at 90-100°C for 6-24 h, whereupon it was poured into cold saturated NH₄Cl (20 mL/mmol). The mixture was
25 extracted with EtOAc (2 x 40 mL/mmol) and the combined organic layers were washed with brine, dried over MgSO₄, filtered and concentrated. Flash chromatography (hexanes:EtOAc) afforded the desired 2*H*-[1,4]oxazino[2,3-*f*]quinoline.

(3R)-3,4-Dihydro-8-isopropoxy-3-methyl-10-(trifluoromethyl)-2H-[1,4]oxazino[2,3-f]quinoline (Structure 8 of Scheme II, where $R^1, R^3, R^4, R^5 = H$, $R^2 = \text{trifluoromethyl}$, $R^6 = \text{Me}$): This compound was prepared according to General Method 3 (EXAMPLE 1) from (2'R)-6-bromo-5-(2'-amino-1'-propoxy)-2-isopropoxy-4-(trifluoromethyl)quinoline (346 mg, 0.85 mmol), (\pm)-2,2'-bis(diphenylphosphino)-1,1'-binaphthyl (21 mg, 4 mol%), $\text{Pd}_2(\text{dba})_3$ (15.6 mg, 2 mol%), sodium *t*-butoxide (114 mg, 1.19 mmol) to afford 190 mg (70%) of (3R)-3,4-dihydro-8-isopropoxy-3-methyl-10-(trifluoromethyl)-2H-[1,4]oxazino[2,3-f]quinoline after purification by flash chromatography (100% hexanes to 4:1 hexanes:EtOAc, gradient elution). $^1\text{H NMR}$ (500 MHz, CDCl_3) δ 7.36 (d, $J = 8.8$, 1H), 7.18 (s, 1H), 7.03 (d, $J = 8.8$, 1H), 5.47 (m, 1H), 4.33 (dd, $J = 10.7, 2.9$, 1H), 3.78 (dd, $J = 10.7, 8.1$, 1H), 3.74 (bs, 1H), 3.66 (m, 1H), 1.38 (d, $J = 5.9$, 3H), 1.37 (d, $J = 6.4$, 3H), 1.24 (d, $J = 6.4$, 3H).

General Method 4: Acid mediated hydrolysis of an isopropyl imino ether to a pyridone. A solution of the imino ether in a 3:1 acetic acid:concentrated HCl (0.1-0.2 M) solution was heated 60-100°C for 4-16 h. The solution was poured into saturated NaHCO_3 (80 mL/mmol), extracted with EtOAc (2 x 80 mL), dried over MgSO_4 , filtered and concentrated and purified as indicated.

(3R)-2,3,4,7-Tetrahydro-3-methyl-10-(trifluoromethyl)-8H-[1,4]oxazino[2,3-f]quinolin-8-one (Compound 101, Structure 9 of Scheme II, where $R^1, R^3, R^4, R^5 = H$, $R^2 = \text{trifluoromethyl}$, $R^6 = \text{Me}$): Compound 101 was prepared by General Method 4 (EXAMPLE 1) from (R)-3,4-dihydro-8-isopropoxy-3-methyl-10-(trifluoromethyl)-2H-[1,4]oxazino[2,3-f]quinoline (14 mg, 0.043 mmol) in 1:1 acetic acid:concentrated HCl (0.01M) heated at 90°C for 4 h to afford 7 mg (58%) of Compound 101, a yellow solid, after column chromatography (3:1 hexanes:EtOAc to 1:1 hexanes:EtOAc, gradient elution). $^1\text{H NMR}$ (500 MHz, CDCl_3) δ 12.37 (bs, 1H), 7.13 (s, 1H), 6.94 (d, $J = 8.79$, 1H), 6.92 (d, $J = 8.79$, 1H), 4.34 (dd, $J = 10.74, 2.93$, 1H), 3.79 (dd, $J = 10.74, 8.10$, 1H), 3.69 (bs, 1H), 3.62 (m, 1H), 1.24 (d, $J = 6.35$, 3H).

EXAMPLE 2

(3*R*)-2,3,4,7-Tetrahydro-3,4-dimethyl-10-(trifluoromethyl)-8*H*-[1,4]oxazino[2,3-*f*]quinolin-8-one (Compound 102, Structure 11 of Scheme II, where $R^1, R^3, R^4, R^5 = H, R^2 =$ trifluoromethyl, $R^6 = Me, R^{13} = CH_3$)

5 **General Method 5:** Reductive amination of a 2*H*-[1,4]oxazino[2,3-*f*]quinoline or an 8*H*-[1,4]oxazino[2,3-*f*]quinolin-8-one derivative with sodium cyanoborohydride and an aldehyde, its hydrate, or its hemiacetal. A solution of the 2*H*-[1,4]oxazino[2,3-*f*]quinoline or 8*H*-[1,4]oxazino[2,3-*f*]quinolin-8-one (1 equiv) and the aldehyde, its hydrate or hemiacetal (10 equiv) in acetic acid or trifluoroacetic acid, was stirred at room temperature for 2 h, whereupon sodium cyanoborohydride (5 equiv) was added portionwise. The solution was stirred for 12-24 h at rt, then poured into cold saturated NaHCO₃ (pH 8-10). The aqueous layer was extracted with EtOAc (2 x 40 mL/mmol) and the combined organic layers were washed with brine, dried over MgSO₄, filtered, concentrated and purified as indicated, or used directly in the next step.

15 (3*R*)-2,3,4,7-Tetrahydro-3,4-dimethyl-10-(trifluoromethyl)-8*H*-[1,4]oxazino[2,3-*f*]quinolin-8-one (Compound 102, Structure 11 of Scheme II, where $R^1, R^3, R^4, R^5 = H, R^2 =$ trifluoromethyl, $R^6 = Me, R^{13} = CH_3$): Compound 102 was prepared according to General Method 5 (EXAMPLE 2) from (3*R*)-3,4-dihydro-8-isopropoxy-3-methyl-10-(trifluoromethyl)-2*H*-[1,4]oxazino[2,3-*f*]quinoline (12 mg, 0.04 mmol), 37% formaldehyde solution (0.010 mL, 0.2 mmol, 5 equiv) and NaCNBH₃ (10 mg, 0.2 mmol, 5 equiv) in 1 mL AcOH (0.04 M) to afford 9 mg (ca. 70%) of (*R*)-3,4-dihydro-8-isopropoxy-3,4-dimethyl-10-(trifluoromethyl)-2*H*-[1,4]oxazino[2,3-*f*]quinoline. This material (9 mg, 0.03 mmol) was taken on directly according to General Method 4 (EXAMPLE 1) by treatment with 3 mL acetic acid and 3 mL concentrated HCl and heated at 90°C for 4 h to afford 7 mg (89%) of
20 Compound 102 after flash chromatography (3:1 hexanes:EtOAc to 1:1 hexanes:EtOAc, gradient elution). ¹H NMR (500 MHz, CDCl₃) δ 11.90 (bs, 1H), 7.12 (s, 1H), 7.01 (d, *J* = 9.3, 1H), 6.96 (d, *J* = 9.3, 1H), 4.19 (dd, *J* = 10.7, 2.9, 1H), 4.11 (dd, *J* = 10.7, 3.7, 1H), 3.45 (m, 1H), 3.23 (s, 3H), 3.21 (d, *J* = 6.3, 3H)

EXAMPLE 3

(3R)-4-Ethyl-2,3,4,7-tetrahydro-3-methyl-10-(trifluoromethyl)-8H-[1,4]oxazino[2,3-f]quinolin-8-one (Compound 103, Structure 11 of Scheme II, where $R^1, R^3, R^4, R^5 = H, R^2 =$ trifluoromethyl, $R^6 = Me, R^{13} = CH_2CH_3$)

5 **General Method 6:** Reductive amination of a 2H-[1,4]oxazino[2,3-f]quinoline or an 8H-[1,4]oxazino[2,3-f]quinolin-2-one with sodium borohydride with acetic acid or a substituted acetic acid. To a solution of the 2H-[1,4]oxazino[2,3-f]quinoline or 8H-[1,4]oxazino[2,3-f]quinolin-2-one in a substituted acetic acid was added NaBH₄ pellets (5-10 equiv). After 12-24 h, the reaction was carefully poured into cold saturated NaHCO₃. The
10 aqueous layer was extracted with EtOAc (2 x 40 mL/mmol) and the combined organic layers were washed with brine, dried over MgSO₄, filtered, concentrated and the compound was purified as indicated.

(3R)-4-Ethyl-2,3,4,7-tetrahydro-3-methyl-10-(trifluoromethyl)-8H-[1,4]oxazino[2,3-f]quinolin-8-one (Compound 103, Structure 11 of Scheme II, where $R^1, R^3, R^4, R^5 = H, R^2 =$ trifluoromethyl, $R^6 = Me, R^{13} = CH_2CH_3$): This compound was prepared according to
15 General Method 6 (EXAMPLE 3) from (3R)-3,4-dihydro-8-isopropoxy-3-methyl-10-(trifluoromethyl)-2H-[1,4]oxazino[2,3-f]quinoline (16 mg, 0.049 mmol) and NaBH₄ pellets (large excess, >10 equiv) in 5 mL acetic acid (0.01 M stirred at rt for 12 h, to afford 18 mg (100%) of (3R)-4-ethyl-3,4-dihydro-8-isopropoxy-3-methyl-10-(trifluoromethyl)-2H-
20 [1,4]oxazino[2,3-f]quinoline. 15 *f*]quinolin-2-one (Compound 137, Structure 17 of Scheme III, where R¹, R³, R⁴, R⁵, R⁷, R⁸ =
H, R² = trifluoromethyl, R⁶, R¹³ = -CH₂CH₂CH₂-)

(*R*)-[1-(2-Fluoro-4-nitrophenyl)-2-pyrrolidinyl]-methanol (Structure 14 of Scheme
III, where R³, R⁴, R⁵, R⁷, R⁸ = H, R⁶, R¹³ = -CH₂CH₂CH₂-): A suspension of 3,4-
difluoronitrobenzene (1.57 g, 9.8 mmol), (*R*)-2-pyrrolidinemethanol (1.0 g, 9.8 mmol) and
20 K₂CO₃ (1.36 g, 9.8 mmol) in 30 mL DMF was heated at 75°C for 20 h, whereupon the
mixture was partitioned between water (100 mL) and EtOAc (100 mL). The aqueous layer
was extracted with EtOAc (100 mL) and the combined organic layers washed with brine,
dried over Na₂SO₄, filtered and concentrated. Flash chromatography (19:1 CH₂Cl₂:MeOH)
afforded 2.27 g (96%) of (*R*)-[1-(2-fluoro-4-nitrophenyl)-2-pyrrolidinyl]-methanol, an orange
25 solid. R_f 0.17 (7:3 hexanes:EtOAc); ¹H NMR (400 MHz, CDCl₃) δ 7.94 (dd, 1H, *J* = 9.1,

(3a*R*)-2,3,3a,4-Tetrahydro-7-nitro-1*H*-pyrrolo[2,1-*c*][1,4]benzoxazine (Structure 15 of Scheme III, where $R^3, R^4, R^5, R^7, R^8 = H, R^6, R^{13} = -CH_2CH_2CH_2-$): A suspension of (*R*)-[1-(2-fluoro-4-nitrophenyl)-2-pyrrolidinyl]-methanol (2.27 g, 9.4 mmol) and NaH (60% mineral oil suspension, 0.737 g, 18.9 mmol) in 35 mL THF was heated at reflux for 1 h. The reaction was quenched with phosphate buffer and the aqueous layer was extracted with EtOAc. The solution was filtered through Celite and the organic layer was washed with brine, dried over MgSO₄, filtered and concentrated. Flash chromatography (3:2 EtOAc:hexanes) afforded 476 mg (22%) of (3a*R*)-2,3,3a,4-tetrahydro-7-nitro-1*H*-pyrrolo[2,1-*c*][1,4]benzoxazine, an orange solid. R_f 0.55 (3:2 hexanes:EtOAc); ¹H NMR (400 MHz, CDCl₃) δ 7.87 (dd, 1H, $J = 9.2, 2.4$), 7.74 (d, 1H, $J = 2.4$), 6.44 (d, 1H, $J = 8.8$), 4.56 (dd, 1H, $J = 10.3, 3.4$), 3.65-3.72 (m, 1H), 3.60 (broad t, 1H, $J = 8.6$), 3.44 (t, 1H, $J = 10.0$), 3.36 (td, 1H, $J = 9.8, 7.3$), 2.15-2.25 (m, 2H), 2.05-2.15 (m, 1H), 1.45-1.55 (m, 1H).

(3a*R*)-7-Amino-2,3,3a,4-tetrahydro-1*H*-pyrrolo[2,1-*c*][1,4]benzoxazine (Structure 16 of Scheme III, where $R^3, R^4, R^5, R^7, R^8 = H, R^6, R^{13} = -CH_2CH_2CH_2-$): A suspension of (3a*R*)-2,3,3a,4-tetrahydro-7-nitro-1*H*-pyrrolo[2,1-*c*][1,4]benzoxazine (0.470 g, 2.10 mmol) and 10% Pd-C (28 mg) in 15 mL EtOAc and 15 mL EtOH was stirred under a hydrogen atmosphere overnight. The mixture was filtered through Celite and concentrated to afford 0.39 g (98%) of (3a*R*)-7-amino-2,3,3a,4-tetrahydro-1*H*-pyrrolo[2,1-*c*][1,4]benzoxazine. R_f 0.55 (3:2 hexanes:EtOAc); ¹H NMR (400 MHz, CDCl₃) δ 6.50 (d, 1H, $J = 8.3$), 6.32 (d, 1H, $J = 2.4$), 6.29 (dd, 1H, $J = 8.3, 2.4$), 4.31 (dd, 1H, $J = 8.3, 1.5$), 3.37-3.50 (m, 3H), 3.31 (broad s, 2H), 3.13 (broad q, 1H, $J = 8.3$), 2.07-2.15 (m, 1H), 1.90-2.05 (m, 2H), 1.40-1.50 (m, 1H).

(6a*R*)-6a,7,8,9-Tetrahydro-4-(trifluoromethyl)-1*H*, 6*H*-pyrrolo[1',2':4,5][1,4]-oxazino[2,3-*f*]quinolin-2-one (Compound 137, Structure 17 of Scheme III, where $R^1, R^3, R^4, R^5, R^7, R^8 = H, R^2 = \text{trifluoromethyl}, R^6, R^{13} = -CH_2CH_2CH_2-$): A solution of (3a*R*)-7-amino-2,3,3a,4-tetrahydro-1*H*-pyrrolo[2,1-*c*][1,4]benzoxazine (0.390 g, 2.05 mmol) and ethyl 4,4,4-trifluoroacetate (0.378 g, 2.05 mmol) in 14 mL benzene was heated at reflux for 16 h, whereupon the solvent was removed *in vacuo*. The resultant solid was treated with 7 mL concentrated sulfuric acid and heated to 100 °C for several hours. The solution was poured

into ice and neutralized with 6N NaOH and extracted with EtOAc (3 x 40 mL). The combined organic layers were washed with brine, dried over MgSO₄, filtered and concentrated. Flash chromatography (92:8 CH₂Cl₂:MeOH) afforded 120 mg of an impure yellow solid. Further purification was performed by reverse phase HPLC (ODS, 5 micron, 10 x 250 mm, 3 mL/min) to afford 5 mg (ca. 1%) of Compound **137**. ¹H NMR (500 MHz, acetone-d₆) δ 10.8 (v. broad s, 1H), 7.07 (d, AB, 1H, J = 8.6), 7.04 (d, AB, 1H, J = 8.6), 6.88 (s, 1H), 4.59 (dd, 1H, J = 10.0, 3.8), 3.38-3.45 (m, 2H), 3.34 (t, 1H, J = 10.0), 3.16-3.22 (m, 1H), 2.12-2.22 (m, 2H), 2.00-2.10 (m, 2H), 1.50-1.60 (m, 2H).

EXAMPLE 38

2,3,4,7-Tetrahydro-2,2,4-trimethyl-10-(trifluoromethyl)-8H-[1,4]oxazino[2,3-f]quinolin-8-one (Compound **138**, Structure **17** of Scheme III, where R¹, R⁵, R⁶, R⁷, R⁸ = H, R² = trifluoromethyl, R³, R⁴, R¹³ = Me)

To a solution of 7-amino-3,4-dihydro-2,2,4-trimethyl-2H-1,4-benzoxazine (0.16 g, 0.83 mmol) in 6 mL toluene was added ethyl 4,4,4-trifluoroacetoacetate (0.18 mL, 1.25 mmol), then the mixture was heated at reflux for 3 h. The solvent was removed under reduced pressure to an oil. This oil was dissolved in 4 mL conc. H₂SO₄ and heated at reflux for 2 h and neutralized by pouring into cold NaOH solution. Flash chromatography afforded Compound **138**, a by-product of the reaction. ¹H NMR (400 MHz, CDCl₃) δ 10.81 (bs, 1H), 7.12 (s, 1H), 7.06 (d, J = 7.5, 1H), 7.01 (d, J = 7.5, 1H), 3.02 (s, 2H), 2.98 (s, 3H) and 1.36 (s, 6H).

(3R)-8-Chloro-3-ethyl-3,4-dihydro-4-(2,2,2-trifluoroethyl)-10-(trifluoromethyl)-2H-[1,4]oxazino[2,3-f]quinoline (Compound **139**, Structure **19** of Scheme IV, where R¹, R³, R⁴, R⁵, R⁷, R⁸ = H, R² = trifluoromethyl, R⁶ = Et, R¹³ = CH₂CF₃)

A solution of Compound **110** (EXAMPLE 10) (48 mg, 0.13 mmol) in 1.3 mL phosphorus pentachloride was heated at 50°C for 4 h. The mixture was poured into cold water

(20 mL) and saturated NaHCO₃ (10 mL) and extracted with EtOAc (2 x 30 mL). The combined organic layers were washed with brine (20 mL), dried over MgSO₄, filtered and concentrated. Flash chromatography (hexanes:EtOAc 4:1) afforded 28 mg (56%) of Compound **139**, a yellow oil. ¹H NMR (400 MHz, CDCl₃) δ 7.68 (d, *J* = 9.2, 1H), 7.67 (s, 1H), 7.42 (d, *J* = 9.2, 1H), 4.45 (d, *J* = 10.8, 1H), 4.00-4.15 (m, 1H), 3.99 (dd, *J* = 10.8, 2.2, 1H), 3.77-3.90 (m, 1H), 3.35-3.45 (m, 1H), 1.45-1.65 (m, 2H), 1.01 (t, *J* = 7.4, 3H).

EXAMPLE 40

(3*R*)-3-Ethyl-3,4-dihydro-8-methoxy-4-(2,2,2-trifluoroethyl)-10-(trifluoromethyl)-2*H*-[1,4]oxazino[2,3-*f*]quinoline (Compound **140**, Structure **20** of Scheme IV, where R¹, R³, R⁴, R⁵, R⁷, R⁸ = H, R² = trifluoromethyl, R⁶ = Et, R¹³ = CH₂CF₃, R¹⁸ = OMe)

A solution of Compound **139** (EXAMPLE 139) (10 mg, 0.025 mmol) and NaOMe (16 mg, 0.30 mmol) in 2 mL MeOH was heated at reflux for 18 h. The mixture was partitioned between saturated NH₄Cl (10 mL) and EtOAc (20 mL). The organic layer was washed with brine (10 mL), dried over MgSO₄, filtered and concentrated. Flash chromatography (hexanes:EtOAc 4:1) afforded 6 mg (60%) of Compound **140**, an off-white solid. ¹H NMR (400 MHz, CDCl₃) δ 7.49 (d, *J* = 9.1, 1H), 7.29 (d, *J* = 9.1, 1H), 7.26 (s, 1H), 4.49 (dd, *J* = 10.7, 1.5, 1H), 4.04 (s, 3H), 3.97 (dd, *J* = 10.7, 2.4, 1H), 3.85-3.95 (m, 1H), 3.75-3.85 (m, 1H), 3.22-3.32 (m, 1H), 1.55-1.65 (m, 2H), 0.99 (t, *J* = 7.4, 3H).

EXAMPLE 41

(3*R*)-3-Ethyl-2,3,4,7-tetrahydro-4-(2,2,2-trifluoroethyl)-10-(trifluoromethyl)-8-*H*-[1,4]oxazino[2,3-*f*]quinoline-8-one (Compound **110**, Structure **29** of Scheme V, where R¹, R³, R⁴, R⁵, R⁷, R⁸ = H, R² = trifluoromethyl, R⁶ = Et, R¹³ = CH₂CF₃)

(2*R*)-(+)-2-(2-Fluoro-4-nitrophenyl)amino-1-butanol (Structure **21** of Scheme V, where R³, R⁴, R⁵, R⁷, R⁸ = H, R⁶ = Et): A mixture of 118 g (0.74 mole) of 3,4-difluoronitrobenzene and 85 g (0.95 mole) of *R*-(+)-2-amino-1-butanol was dissolved in 400 mL of absolute ethanol. To this solution was then added 62.2 g (0.74 mole) of sodium bicarbonate. The suspension was stirred and heated at reflux temperature for 12 h when TLC

indicated complete conversion of the 3,4-difluoronitrobenzene. After cooling to room temperature, the reaction mixture was filtered with the aid of additional ethanol and the ethanol was then evaporated. The crude product thus obtained was distilled under reduced pressure (110-112°C, 2 mm Hg) to afford (2*R*)-(+)-2-(2-fluoro-4-nitrophenyl)amino-1-butanol as a red solid. Yield, 162g (96%). $[\alpha]_D^{25} +95.4$ (CHCl₃, *c* 22.7); ¹H NMR (CDCl₃) δ 7.88 (1H, dd, *J* = 2.4, 8.9), 7.76 (1H dd *J* = 2.4, 11.7), 6.66 (1H, dd, *J* = 8.7), 4.88 (1H, m), 3.76 (1H dd, *J* = 4.2, 11.2), 3.68 (1H, dd *J* = 4.2, 11.2), 3.52 (1H, m), 2.63 (1H, bs), 1.70 (1H, m), 1.59 (1H, m), 0.97 (3H, t, *J* = 7.5). ¹³C NMR: ppm 150.1, 147.7, 142.8, 142.7, 136.1, 122.3, 110.9, 110.7, 109.5, 63.6, 55.8, 24.4, 10.4.

(2*S*,4*R*)-(-)-3-(2-Fluoro-4-nitrophenyl)-4-ethyl-2-(trifluoromethyl)-1,3-oxazolidine (Structure 22 of Scheme V, where R³, R⁴, R⁵, R⁷, R⁸ = H, R⁶ = Et, R^A = trifluoromethyl) and (2*R*,4*R*)-(+)-3-(2-Fluoro-4-nitrophenyl)-4-ethyl-2-(trifluoromethyl)-1,3-oxazolidine (Structure 22 of Scheme V, where R³, R⁴, R⁵, R⁷, R⁸ = H, R⁶ = Et, R^A = trifluoromethyl): A 2-L three-necked RB flask equipped with a Dean-Stark condenser was charged sequentially with 172 g (0.75 mole) of (2*R*)-(+)-2-(2-fluoro-4-nitrophenyl)amino-1-butanol, 750 mL of toluene, 543 g (3.77 mole) of trifluoroacetaldehyde ethyl hemiacetal and 34.4 g of *p*-toluenesulfonic acid. The reaction mixture was refluxed with azeotropic removal of water for 10-12 h. After cooling to room temperature the reaction mixture was concentrated under reduced pressure. The residue was dissolved in ethyl acetate and washed with aqueous sodium bicarbonate, brine and dried over anhydrous MgSO₄. After filtration, the solvents were removed under reduced pressure to afford a mixture of the desired oxazolidines (2*S*,4*R*)-(-)-3-(2-fluoro-4-nitrophenyl)-4-ethyl-2-(trifluoromethyl)-1,3-oxazolidine (*cis*-isomer) and (2*R*,4*R*)-(+)-3-(2-fluoro-4-nitrophenyl)-4-ethyl-2-(trifluoromethyl)-1,3-oxazolidine (*trans*-isomer) as a low melting solid. The product was found to be a mixture of two diastereoisomers (*cis/trans*, 4:3). Total yield 230 g (100%). (2*S*,4*R*)-(-)-3-(2-fluoro-4-nitrophenyl)-4-ethyl-2-(trifluoromethyl)-1,3-oxazolidine: (*cis*-isomer): ¹H NMR (CDCl₃) δ 8.01 (1H, dd, *J* = 2.5, 8.9), 7.95 (1H, dd, *J* = 2.5, 13.1), 6.95 (1H, t, *J* = 8.7), 5.82 (1H, q, *J* = 4.6), 4.42 (1H, bt, *J* = 7.46), 4.27 (1H, m), 4.08 (1H, d, *J* = 8.5), 1.55 (1H, m), 1.42 (1H, m), 0.87 (3H, t, *J* = 7.4). ¹³C-NMR: ppm 153.2,

(2*R*)-2-[2-Fluoro-4-nitro(2,2,2-trifluoroethyl)anilino]-1-butanol (Structure 23 of Scheme V, where $R^3, R^4, R^5, R^7, R^8 = H, R^6 = Et, R^{13} = CH_2CF_3$): A 2-L three-necked RB flask equipped with an addition funnel and mechanical stirrer was charged sequentially with 230 g (0.75 mole) of the mixture of (-)-(2*S*,4*R*)- and (+)-(2*R*,4*R*)-3-(2-fluoro-4-nitrophenyl)-4-ethyl-2-(trifluoromethyl)-1,3-oxazolidine, 1.0 Liter of dry chloroform and 290 g (2.5 mole) of triethylsilane. The solution stirred under an atmosphere of nitrogen and cooled to $-78^\circ C$. 161 g (0.85 mole) of $TiCl_4$ was added in drops through the addition funnel. After the addition was complete, the reaction mixture was allowed to warm to room temperature and stirred for another 24 h. The reaction mixture was quenched with ice and then neutralized with aq. Na_2CO_3 . The organic layers were washed with water, brine and dried over $MgSO_4$. After filtration, the solvents were evaporated under reduced pressure and the residue was purified by silica gel column chromatography (ethyl acetate: hexanes 1: 9) to afford (2*R*)-2-[2-fluoro-4-nitro(2,2,2-trifluoroethyl)anilino]-1-butanol as a glassy solid. Yield 190 g (82%). 1H NMR (500 MHz, $CDCl_3$) δ 7.98 (dd, $J = 8.8, 2.4, 1H$), 7.94 (dd, $J = 13.2, 2.9, 1H$), 7.37 (dd, $J = 8.8, 8.8, 1H$), 4.12 (m, 1H), 3.87 (m, 1H), 3.77 (m, 1H), 3.70 (m, 1H), 3.57 (m, 1H), 1.78 (dd, $J = 6.8, 4.4, 1H$), 1.58 (dq, $J = 7.8, 2.9, 2H$), 0.95 (t, $J = 7.3, 1H$).

(+)-(3*R*)-3-Ethyl-3,4-dihydro-7-nitro-4-(2,2,2-trifluoroethyl)-2*H*-1,4-benzoxazine (Structure 24 of Scheme V, where $R^3, R^4, R^5, R^7, R^8 = H, R^6 = Et, R^{13} = CH_2CF_3$): A solution of 190 g (0.612 mole) of the crude (2*R*)-2-[2-fluoro-4-nitro(2,2,2-trifluoroethyl)anilino]-1-butanol in 1 Liter of dry THF was added dropwise to a stirred suspension of 36.77 g (0.919 mole, 1.5 eq) of sodium hydride in 1.5 L of dry THF under nitrogen atmosphere. After complete addition, the reaction mixture was refluxed for 3 h when TLC of the reaction mixture indicated complete conversion. After cooling to room temperature, 400 mL of methanol was added to destroy excess sodium hydride. The reaction mixture was poured into ice-cold water and extracted with ethyl acetate. The organic portions were combined, washed with brine and dried over $MgSO_4$. After filtration, the solvents were evaporated under

reduced pressure. The crude product thus obtained was purified by silica gel column chromatography (ethyl acetate: hexanes 1:9) to obtain (+)-(3*R*)-3-ethyl-3,4-dihydro-7-nitro-4-(2,2,2-trifluoroethyl)-2*H*-1,4-benzoxazine as a yellow crystalline solid. Yield 71 g (40%).

(3*R*)-3-Ethyl-3,4-dihydro-4-(2,2,2-trifluoroethyl)-7-(trimethylacetamido)-2*H*-1,4-benzoxazine (Structure 26 of Scheme V, where R³, R⁴, R⁵, R⁷, R⁸ = H, R⁶ = Et, R¹³ =

CH₂CF₃, R^b = *t*-butyl): A solution of 35 g (0.121 mole) 7-nitrobenzoxazine in 700 mL of ethyl acetate containing 3.5 g of 10% palladium on carbon was hydrogenated under ambient pressure. The reaction mixture was stirred for 12 h at room temperature. When TLC of the reaction mixture indicated complete conversion, 14.2 g (0.18 mol) of pyridine was added to the solution. After stirring for an hour, 17.4 g of trimethylacetyl chloride was added dropwise to the reaction mixture and it was stirred for another 2 hours until TLC indicated the complete conversion. The reaction mixture was quenched with ice and the organic layers were washed with sodium bicarbonate solution, 0.5 N HCl and brine. The crude product thus obtained was subject to silica gel column chromatography (ethyl acetate: hexanes 1:9) to afford the desired (3*R*)-3-ethyl-3,4-dihydro-4-(2,2,2-trifluoroethyl)-7-(trimethylacetamido)-2*H*-1,4-benzoxazine as a white solid. Yield 35 g (84%). dissolved in 800 mL of dry ether under nitrogen atmosphere. The solution was then cooled to -30°C and 150 mL (1.7M in pentane, 0.255 mol) of *n*-BuLi was added dropwise. The reaction mixture was stirred at -30°C for one hour before it was allowed to warm to -8°C. The temperature of the reaction mixture was then maintained at -8°C to -5°C for 5 hours after which it was cooled down to -30°C. 57.9 g of ethyl trifluoroacetate (0.408 mol) was then added to the reaction mixture and the solution was allowed to warm up to room temperature overnight. The reaction mixture was poured in to aqueous ammonium chloride and extracted with ether. The organic portions were combined, washed with brine, dried over MgSO₄ and evaporated under reduced pressure. The crude product thus obtained was purified by silica gel column chromatography (ethyl acetate: hexanes 1: 9) to provide 25 g (56%) of (3*R*)-(-)-3-ethyl-3,4-dihydro-8-(trifluoroacetyl)-4-(2,2,2-trifluoroethyl)-7-(trimethylacetamido)-2*H*-1,4-benzoxazine.

(3*R*)-8-[2-(1-Carbethoxyprop-1-enyl)]-3-ethyl-3,4-dihydro-4-(2,2,2-trifluoroethyl)-7-(trimethylacetamido)-2*H*-1,4-benzoxazine (Structure 28 of Scheme V, where R³, R⁴, R⁵, R⁷, R⁸ = H, R⁶ = Et, R¹³ = CH₂CF₃, R^b = *t*-butyl): A 1-L round bottom flask was charged with 25 g (57 mmol) of (3*R*)-(-)-3-ethyl-3,4-dihydro-8-(trifluoroacetyl)-4-(2,2,2-trifluoroethyl)-7-(trimethylacetamido)-2*H*-1,4-benzoxazine, 23.8 g (68.4 mmol) of (carbethoxymethylene)-triphenyl phosphorane and 500 mL of toluene. The solution was heated to reflux for 4-5 hours until TLC indicated that the starting material was gone. The toluene was evaporated and 500 mL of ether/hexane (1:1) was added to the crude product. The solution was then cooled down to -5°C for several hours and filtered. The filtrate was concentrated under reduced pressure and subject to silica gel column (ethyl acetate : hexane, 1: 4) to afford 28.5 g (93%) (3*R*)-8-[2-(1-carbethoxyprop-1-enyl)]-3-ethyl-3,4-dihydro-4-(2,2,2-trifluoroethyl)-7-(trimethylacetamido)-2*H*-1,4-benzoxazine as a brown oil. BIOLOGICAL EXAMPLES

20 A. Steroid Receptor Activity

Utilizing the "cis-trans" or "co-transfection" assay described by Evans et al., Science, 240:889-95 (May 13, 1988), the disclosure of which is incorporated by reference herein, the compounds of the present invention were tested and found to have strong, specific activity as agonists, partial agonists and antagonists of AR. This assay is described in further detail in U.S. Patent Nos. 4,981,784 and 5,671,773, the disclosures of which are incorporated herein by reference.

The co-transfection assay provides a method for identifying functional agonists and partial agonists that mimic, or antagonists that inhibit, the effect of native hormones and quantifying their activity for responsive IR proteins. In this regard, the co-transfection assay mimics an *in vivo* system in the laboratory. Importantly, activity in the co-transfection assay correlates very well with known *in vivo* activity, such that the co-transfection assay functions as a qualitative and quantitative predictor of a tested compounds *in vivo* pharmacology. See, e.g., T. Berger et al. 41 *J. Steroid Biochem. Molec. Biol.* 773 (1992), the disclosure of which is herein incorporated by reference.

In the co-transfection assay, a cloned cDNA for an IR (e.g., human PR, AR or GR) under the control of a constitutive promoter (e.g., the SV 40 promoter) is introduced by transfection (a procedure to induce cells to take up foreign genes) into a background cell substantially devoid of endogenous IRs. This introduced gene directs the recipient cells to make the IR protein of interest. A second gene is also introduced (co-transfected) into the same cells in conjunction with the IR gene. This second gene, comprising the cDNA for a reporter protein, such as firefly luciferase (LUC), controlled by an appropriate hormone responsive promoter containing a hormone response element (HRE). This reporter plasmid functions as a reporter for the transcription-modulating activity of the target IR. Thus, the reporter acts as a surrogate for the products (mRNA then protein) normally expressed by a gene under control of the target receptor and its native hormone.

The co-transfection assay can detect small molecule agonists or antagonists of target IRs. Exposing the transfected cells to an agonist ligand compound increases reporter activity in the transfected cells. This activity can be conveniently measured, e.g., by increasing luciferase production, which reflects compound-dependent, IR-mediated increases in reporter transcription. A partial agonist's activity can be detected in a manner similar to that of the full agonist, except that the maximum measured activity, e.g., luciferase production, is less than that of an agonist standard. For example, for AR, a partial agonist can be detected by measuring increased luciferase production, but the maximum effect at high concentration is less than the maximum effect for dihydrotestosterone. To detect antagonists, the co-

transfection assay is carried out in the presence of a constant concentration of an agonist to the target IR (e.g., progesterone for PR) known to induce a defined reporter signal. Increasing concentrations of a suspected antagonist will decrease the reporter signal (e.g., luciferase production). The co-transfection assay is therefore useful to detect both agonists and
5 antagonists of specific IRs. Furthermore, it determines not only whether a compound interacts with a particular IR, but whether this interaction mimics (agonizes) or blocks (antagonizes) the effects of the native regulatory molecules on target gene expression, as well as the specificity and strength of this interaction.

The activity of selected steroid receptor modulator compounds of the present invention
10 were evaluated utilizing the co-transfection assay and in standard IR binding assays, according to the following illustrative Examples.

B. Co-transfection assay

CV-1 cells (African green monkey kidney fibroblasts) were cultured in the presence of
15 Dulbecco's Modified Eagle Medium (DMEM) supplemented with 10% charcoal resin-stripped fetal bovine serum (CH-FBS) then transferred to 96-well microtiter plates one day prior to transfection.

To determine AR agonist and antagonist activity of the compounds of the present invention, the CV-1 cells were transiently transfected by calcium phosphate coprecipitation
20 according to the procedure of Berger et al., 41 *J. Steroid Biochem. Mol. Biol.*, 733 (1992) with the following plasmids: pRShAR (5 ng/well), MTV-LUC reporter (100 ng/well), pRS- β -Gal (50 ng/well) and filler DNA (pGEM; 45 ng/well). The receptor plasmid, pRShAR, contains the human AR under constitutive control of the SV-40 promoter, as more fully described in J.A. Simental et al., "Transcriptional activation and nuclear targeting signals of the human
25 androgen receptor", 266 *J. Biol. Chem.*, 510 (1991).

The reporter plasmid, MTV-LUC, contains the cDNA for firefly luciferase (LUC) under control of the mouse mammary tumor virus (MTV) long terminal repeat, a constitutive promoter containing an androgen response element. See e.g., Berger et al. *supra*. In addition,

pRS- β -Gal, coding for constitutive expression of *E. coli* β -galactosidase (β -Gal), was included as an internal control for evaluation of transfection efficiency and compound toxicity.

Six hours after transfection, media was removed and the cells were washed with phosphate-buffered saline (PBS). Media containing reference compounds (*i.e.* progesterone as a PR agonist, mifepristone ((11 β ,17 β)-11-[4-(dimethylamino)phenyl]-17-hydroxy-17-(1-propynyl)estra-4,9-dien-3-one; RU486; Roussel Uclaf) as a PR antagonist; dihydrotestosterone (DHT; Sigma Chemical) as an AR agonist and 2-OH-flutamide (the active metabolite of 2-methyl-*N*-[4-nitro-3-(trifluoromethyl)phenyl]-pronanamide; Schering-Plough) as an AR antagonist; estradiol (Sigma) as an ER agonist and ICI 164,384 (N-butyl-3,17-dihydroxy-*N*-methyl-(7- α ,17- β)-estra-1,3,5(10)-triene-7-undecanamide; ICI Americas) as an ER antagonist; dexamethasone (Sigma) as a GR agonist and RU486 as a GR antagonist; and aldosterone (Sigma) as a MR agonist and spironolactone ((7- α -[acetylthio]-17- α -hydroxy-3-oxopregn-4-ene-21-carboxylic acid γ -lactone (Sigma) as an MR antagonist; and/or the modulator compounds of the present invention in concentrations ranging from 10⁻¹² to 10⁻⁵ M were added to the cells. Three to four replicates were used for each sample. Transfections and subsequent procedures were performed on a Biomek 1000 automated laboratory work station.

After 40 hours, the cells were washed with PBS, lysed with a Triton X-100-based buffer and assayed for LUC and β -Gal activities using a luminometer or spectrophotometer, respectively. For each replicate, the normalized response (NR) was calculated as:

$$\text{LUC response}/\beta\text{-Gal rate}$$

where β -Gal rate = β -Gal/ β -Gal incubation time.

The mean and standard error of the mean (SEM) of the NR were calculated. Data were plotted as the response of the compound compared to the reference compounds over the range of the dose-response curve. For agonist experiments, the effective concentration that produced 50% of the maximum response (EC₅₀) was quantified. Agonist efficacy was a function (%) of LUC expression relative to the maximum LUC production by the reference agonist for PR, AR, ER, GR or MR. Antagonist activity was determined by testing the

amount of LUC expression in the presence of a fixed amount of DHT as an AR agonist and progesterone as a PR agonist at the EC₅₀ concentration. The concentration of a test compound that inhibited 50% of LUC expression induced by the reference agonist was quantified (IC₅₀). In addition, the efficacy of antagonists was determined as a function (%)
5 of maximal inhibition.

Table 1: Agonist, partial agonist, antagonist and binding activity of androgen receptor modulator compounds of present invention and the reference agonist compound, dihydrotestosterone (**DHT**), a known synthetic androgen, fluoxymesterone (**Fluox**) and reference antagonist compounds, 2-hydroxyflutamide (**Flut**) and Casodex (**Cas**), on hAR in CV-1 cells. Efficacy (%) for AR agonist is determined by comparing activity (e.g., luciferase production) of putative agonist to that of dihydrotestosterone (**DHT**). Efficacy (%) for AR antagonist is determined by the percentage amount by which the luciferase production is reduced (maximum concentration of antagonist) from the luciferase production of the standard (**DHT**).

The present invention includes any combination of the various species and subgeneric groupings falling within the generic disclosure. This invention therefore includes the generic description of the invention with a proviso or negative limitation removing any subject matter
10 from the genus, regardless of whether or not the excised material is specifically recited herein.

While in accordance with the patent statutes, description of the various embodiments and processing conditions have been provided, the scope of the invention is not to be limited thereto or thereby. Modifications and alterations of the present invention will be apparent to those skilled in the art without departing from the scope and spirit of the present invention.

15 Therefore, it will be appreciated that the scope of this invention is to be defined by the appended claims, rather than by the specific examples which have been presented by way of example.

We claim:

1. A compound having the formula:

(I)

OR

(II)

OR

(III)

OR

(IV)

5

wherein:

R^1 is selected from the group of hydrogen, F, Cl, Br, I, NO_2 , OR^9 , $\text{NR}^{10}\text{R}^{11}$, $\text{S(O)}_n\text{R}^9$, $\text{C}_1 - \text{C}_8$ alkyl, $\text{C}_1 - \text{C}_8$ haloalkyl, $\text{C}_1 - \text{C}_8$ heteroalkyl, $\text{C}_3 - \text{C}_8$ cycloalkyl, aryl, arylalkyl, heteroaryl, $\text{C}_2 - \text{C}_8$ alkynyl and $\text{C}_2 - \text{C}_8$ alkenyl, wherein the alkyl, haloalkyl, heteroalkyl, cycloalkyl, aryl, arylalkyl, heteroaryl, alkynyl and alkenyl groups may be optionally substituted;

R^2 is selected from the group of hydrogen, F, Cl, Br, I, CF_3 , CF_2Cl , CF_2H , CFH_2 , CF_2OR^9 , CH_2OR^9 , OR^9 , $\text{S(O)}_n\text{R}^9$, $\text{NR}^{10}\text{R}^{11}$, $\text{C}_1 - \text{C}_8$ alkyl, $\text{C}_1 - \text{C}_8$ haloalkyl, $\text{C}_1 - \text{C}_8$ heteroalkyl, $\text{C}_3 - \text{C}_8$ cycloalkyl, aryl, arylalkyl, heteroaryl, $\text{C}_2 - \text{C}_8$ alkynyl and $\text{C}_2 - \text{C}_8$ alkenyl, wherein the alkyl, haloalkyl, heteroalkyl, cycloalkyl, aryl, arylalkyl, heteroaryl, alkynyl and alkenyl groups may be optionally substituted;

R^3 and R^4 each independently is selected from the group of hydrogen, OR^9 , $\text{S(O)}_n\text{R}^9$, $\text{NR}^{10}\text{R}^{11}$, C(Y)OR^{11} , $\text{C(Y)NR}^{10}\text{R}^{11}$, $\text{C}_1 - \text{C}_8$ alkyl, $\text{C}_1 - \text{C}_8$ haloalkyl, $\text{C}_1 - \text{C}_8$ heteroalkyl, $\text{C}_3 - \text{C}_8$ cycloalkyl, aryl, arylalkyl, heteroaryl, $\text{C}_2 - \text{C}_8$ alkynyl and $\text{C}_2 - \text{C}_8$ alkenyl, wherein the alkyl, haloalkyl, heteroalkyl, cycloalkyl, aryl, arylalkyl, heteroaryl, alkynyl and alkenyl groups may be optionally substituted; or

R^3 and R^4 taken together form a three to eight membered saturated or unsaturated carbocyclic or heterocyclic ring; or

R^3 and R^5 taken together form a three to eight membered saturated or unsaturated carbocyclic ring; or

R^3 and R^6 taken together form a three to eight membered saturated or unsaturated carbocyclic ring; or

R^3 and R^{13} taken together form a three to eight membered saturated or unsaturated heterocyclic ring;

5 R^5 and R^6 each independently are selected from the group of hydrogen, CF_3 , CF_2Cl , CF_2H , CFH_2 , $C_1 - C_8$ alkyl, $C_1 - C_8$ haloalkyl, $C_1 - C_8$ heteroalkyl, $C_3 - C_8$ cycloalkyl, aryl, arylalkyl, heteroaryl, $C_2 - C_8$ alkynyl and $C_2 - C_8$ alkenyl, wherein the alkyl, haloalkyl, heteroalkyl, cycloalkyl, aryl, arylalkyl, heteroaryl, alkynyl and alkenyl groups may be optionally substituted; or

10 R^5 and R^6 taken together form a three to eight membered saturated or unsaturated carbocyclic ring; or

R^5 and R^{13} taken together form a three to eight membered saturated or unsaturated heterocyclic ring; or

15 R^6 and R^{13} taken together form a three to eight membered saturated or unsaturated heterocyclic ring;

R^7 is selected from the group of hydrogen, F, Cl, Br, I, $C_1 - C_8$ alkyl, $C_1 - C_8$ haloalkyl, $C_1 - C_8$ heteroalkyl, aryl, heteroaryl, OR^9 , $S(O)_nR^9$, $NR^{10}R^{11}$, $C(Y)OR^{11}$ and $C(Y)NR^{10}R^{11}$, wherein the alkyl, haloalkyl, heteroalkyl, aryl and heteroaryl groups may be optionally substituted;

20 R^8 is selected from the group of hydrogen, F, Cl, Br, I, $C_1 - C_8$ alkyl, $C_1 - C_8$ haloalkyl, $C_1 - C_8$ heteroalkyl, aryl, heteroaryl, OR^9 , $S(O)_nR^9$, $NR^{10}R^{11}$, $C(Y)OR^{11}$ and $C(Y)NR^{10}R^{11}$, wherein the alkyl, haloalkyl, heteroalkyl, aryl and heteroaryl groups may be optionally substituted;

25 R^9 is selected from the group of hydrogen, $C_1 - C_8$ alkyl, $C_1 - C_8$ haloalkyl, $C_1 - C_8$ heteroalkyl, aryl, heteroaryl and arylalkyl, wherein the alkyl, haloalkyl, heteroalkyl, aryl, heteroaryl and arylalkyl groups may be optionally substituted;

R^{10} is selected from the group of hydrogen, $C_1 - C_8$ alkyl, $C_1 - C_8$ haloalkyl, $C_1 - C_8$ heteroalkyl, aryl, heteroaryl, arylalkyl, CO_2R^{12} , $C(O)R^{12}$, SO_2R^{12} and $S(O)R^{12}$, wherein the

alkyl, haloalkyl, heteroalkyl, aryl, heteroaryl and arylalkyl groups may be optionally substituted;

R^{11} and R^{12} each independently is selected from the group of hydrogen, $C_1 - C_8$ alkyl, $C_1 - C_8$ haloalkyl, $C_1 - C_8$ heteroalkyl, aryl, heteroaryl and arylalkyl, wherein the alkyl, haloalkyl, heteroalkyl, aryl, heteroaryl and arylalkyl groups may be optionally substituted;

R^{13} is selected from the group of $C_1 - C_8$ alkyl, $C_1 - C_8$ haloalkyl, $C_1 - C_8$ heteroalkyl, $C_2 - C_8$ alkenyl, $C_2 - C_8$ alkynyl, $C_3 - C_8$ cycloalkyl, aryl, heteroaryl, arylalkyl and heteroarylalkyl, wherein the alkyl, haloalkyl, heteroalkyl, alkenyl, alkynyl, cycloalkyl, aryl, heteroaryl, arylalkyl and heteroarylalkyl groups may be optionally substituted;

R^{16} is selected from the group of hydrogen, $C_1 - C_8$ alkyl, $C_1 - C_8$ haloalkyl, $C_1 - C_8$ heteroalkyl, COR^{17} , CO_2R^{17} and $CONR^{12}R^{17}$, wherein the alkyl, haloalkyl and heteroalkyl groups may be optionally substituted;

R^{17} is selected from the group of hydrogen, $C_1 - C_8$ alkyl, $C_1 - C_8$ haloalkyl and $C_1 - C_8$ heteroalkyl, wherein the alkyl, haloalkyl and heteroalkyl groups may be optionally substituted;

R^{18} is selected from the group of hydrogen, F, Br, Cl, I, CN, $C_1 - C_8$ alkyl, $C_1 - C_8$ haloalkyl, $C_1 - C_8$ heteroalkyl, OR^{16} , $NR^{16}R^{17}$, SR^{16} , CH_2R^{16} , COR^{17} , CO_2R^{17} , $CONR^{16}R^{17}$, SOR^{17} and SO_2R^{17} , wherein the alkyl, haloalkyl and heteroalkyl groups may be optionally substituted;

R^{19} is selected from the group of hydrogen, $C_1 - C_8$ alkyl, $C_1 - C_8$ haloalkyl, $C_1 - C_8$ heteroalkyl, $C_2 - C_8$ alkenyl, $C_2 - C_8$ alkynyl, $C_3 - C_8$ cycloalkyl, aryl, heteroaryl, arylalkyl and heteroarylalkyl, wherein the alkyl, haloalkyl, heteroalkyl, alkenyl, alkynyl, cycloalkyl, aryl, heteroaryl, arylalkyl and heteroarylalkyl groups may be optionally substituted;

m is selected from the group of 0, 1 and 2;

n is selected from the group of 0, 1 and 2;

V is selected from the group of O and S;

W is selected from the group of O, $S(O)_n$, NH, $N\{R^{13}\}$, $N\{C(Y)R^{11}\}$ and $N\{SO_2R^{11}\}$;

X and Z each independently is selected from the group of O, S(O)_n, NH, N{R¹¹}, N{C(Y)R¹¹}, N{SO₂R¹²} and N{S(O)R¹²}; and

Y is selected from the group of O, S, N{R¹⁹} and N{OR¹⁹};

and pharmaceutically acceptable salts thereof.

5

2. A compound according to claim 1, wherein R¹ is selected from the group of hydrogen, F, Cl, OR⁹, NR¹⁰R¹¹, S(O)_nR⁹, C₁ – C₄ alkyl, C₁ – C₄ haloalkyl and C₁ – C₄ heteroalkyl, wherein the alkyl, haloalkyl and heteroalkyl groups may be optionally substituted.

10

3. A compound according to claim 2, wherein R¹ is selected from the group of hydrogen, F, Cl, C₁ – C₄ alkyl, C₁ – C₄ haloalkyl and C₁ – C₄ heteroalkyl, wherein the alkyl, haloalkyl and heteroalkyl groups may be optionally substituted.

15

4. A compound according to claim 3, wherein R¹ is selected from the group of hydrogen, F and optionally substituted C₁ – C₄ alkyl.

5. A compound according to claim 1, wherein R² is selected from the group of hydrogen, F, Cl, Br, I, CF₃, CF₂Cl, CF₂H, CFH₂, CF₂OR⁹, CH₂OR⁹, OR⁹, S(O)_nR⁹, C₁ – C₆ alkyl, C₁ – C₆ haloalkyl, C₁ – C₆ heteroalkyl, C₂ – C₆ alkynyl and C₂ – C₆ alkenyl, wherein the alkyl, haloalkyl, heteroalkyl, alkynyl and alkenyl groups may be optionally substituted.

20

6. A compound according to claim 5, wherein R² is selected from the group of hydrogen, F, Cl, CF₃, CF₂Cl, CF₂H, CFH₂, C₁ – C₄ alkyl, C₁ – C₄ haloalkyl and C₁ – C₄ heteroalkyl, wherein the alkyl, haloalkyl and heteroalkyl groups may be optionally substituted.

25

7. A compound according to claim 6, wherein R^2 is selected from the group of hydrogen, $C_1 - C_2$ alkyl, $C_1 - C_2$ haloalkyl and $C_1 - C_2$ heteroalkyl, wherein the alkyl, haloalkyl and heteroalkyl groups may be optionally substituted.

5 8. A compound according to claim 7, wherein R^2 is CF_3 .

9. A compound according to claim 1, wherein R^3 is selected from the group of hydrogen, $C_1 - C_6$ alkyl, $C_1 - C_6$ haloalkyl, $C_1 - C_6$ heteroalkyl, $C(Y)OR^{11}$ and $C(Y)NR^{10}R^{11}$, wherein the alkyl, haloalkyl and heteroalkyl groups may be optionally substituted; or

10

R^3 and R^6 taken together form a three to eight membered saturated or unsaturated carbocyclic ring.

10. A compound according to claim 9, wherein R^3 and R^6 taken together form a four to six membered saturated or unsaturated carbocyclic ring.

15

11. A compound according to claim 9, wherein R^3 is selected from the group of hydrogen, $C_1 - C_4$ alkyl, $C_1 - C_4$ haloalkyl and $C_1 - C_4$ heteroalkyl, wherein the alkyl, haloalkyl and heteroalkyl groups may be optionally substituted.

20

12. A compound according to claim 1, wherein R^6 is selected from the group of hydrogen, CF_3 , CF_2Cl , CF_2H , CFH_2 , $C_1 - C_6$ alkyl, $C_1 - C_6$ haloalkyl, $C_1 - C_6$ heteroalkyl, aryl, arylalkyl, heteroaryl, $C_2 - C_6$ alkynyl and $C_2 - C_6$ alkenyl, wherein the alkyl, heteroalkyl, haloalkyl, aryl, arylalkyl, heteroaryl, alkynyl and alkenyl groups may be optionally substituted.

25

13. A compound according to claim 12, wherein R^6 is selected from the group of hydrogen, CF_3 , CF_2Cl , CF_2H , CFH_2 , $C_1 - C_4$ alkyl, $C_1 - C_4$ haloalkyl, $C_1 - C_4$ heteroalkyl,

C₂ – C₄ alkynyl and C₂ – C₄ alkenyl, wherein the alkyl, heteroalkyl, haloalkyl, alkynyl and alkenyl groups may be optionally substituted.

14. A compound according to claim 13, wherein R⁶ is selected from the group of
5 hydrogen, CF₃, CF₂Cl, CF₂H, CFH₂, C₁ – C₄ alkyl, C₁ – C₄ haloalkyl and C₁ – C₄ heteroalkyl, wherein the alkyl, haloalkyl and heteroalkyl groups may be optionally substituted.

15. A compound according to claim 12, wherein R⁶ is selected from the group of
aryl, arylalkyl and heteroaryl, wherein the aryl, arylalkyl and heteroaryl groups may be
10 optionally substituted.

16. A compound according to claim 1, wherein R⁵ is selected from the group of
hydrogen, CF₃, CF₂Cl, CF₂H, CFH₂, C₁ – C₆ alkyl, C₁ – C₆ haloalkyl, C₁ – C₆ heteroalkyl,
C₂ – C₆ alkynyl, C₂ – C₆ alkenyl, wherein the alkyl, haloalkyl, heteroalkyl, alkynyl and
15 alkenyl groups may be optionally substituted.

17. A compound according to claim 16, wherein R⁵ is selected from the group of
hydrogen, CF₃, CF₂Cl, CF₂H, CFH₂, C₁ – C₆ alkyl, C₁ – C₆ haloalkyl and C₁ – C₆ heteroalkyl,
wherein the alkyl, haloalkyl and heteroalkyl groups may be optionally substituted.
20

18. A compound according to claim 17, wherein R⁵ is selected from the group of
hydrogen, CF₃, CF₂Cl, CF₂H, CFH₂, C₁ – C₄ alkyl, C₁ – C₄ haloalkyl and C₁ – C₄ heteroalkyl,
wherein the alkyl, haloalkyl and heteroalkyl groups may be optionally substituted.

25 19. A compound according to claim 18, wherein R⁵ is hydrogen or CF₃.

20. A compound according to claim 1, wherein R^7 is selected from the group of hydrogen, F, Cl, $C_1 - C_4$ alkyl, $C_1 - C_4$ haloalkyl and $C_1 - C_4$ heteroalkyl, wherein the alkyl, haloalkyl and heteroalkyl, groups may be optionally substituted.

5 21. A compound according to claim 1, wherein R^8 is selected from the group of hydrogen, F, Cl, $C_1 - C_4$ alkyl, $C_1 - C_4$ haloalkyl and $C_1 - C_4$ heteroalkyl, wherein the alkyl, haloalkyl and heteroalkyl, groups may be optionally substituted

22. A compound according to claim 21, wherein R^7 and R^8 are each hydrogen or
10 optionally substituted $C_1 - C_2$ alkyl.

23. A compound according to claim 1, wherein R^9 is selected from the group of hydrogen, $C_1 - C_6$ alkyl, $C_1 - C_6$ haloalkyl and $C_1 - C_6$ heteroalkyl, wherein the alkyl, haloalkyl and heteroalkyl groups may be optionally substituted.

15 24. A compound according to claim 23, wherein R^9 is selected from the group of hydrogen and optionally substituted $C_1 - C_4$ alkyl.

25. A compound according to claim 1, wherein R^{10} is selected from the group of
20 hydrogen, $S(O)R^{12}$, SO_2R^{12} , $C(O)R^{12}$, CO_2R^{12} , $C_1 - C_6$ alkyl, $C_1 - C_6$ haloalkyl and $C_1 - C_6$ heteroalkyl, wherein the alkyl, haloalkyl and heteroalkyl groups may be optionally substituted.

26. A compound according to claim 25, wherein R^{10} is selected from the group of
25 hydrogen, $S(O)R^{12}$, SO_2R^{12} , $C(O)R^{12}$ and CO_2R^{12} .

27. A compound according to claim 1, wherein R^4 is selected from the group of hydrogen, $C_1 - C_4$ alkyl, $C_1 - C_4$ haloalkyl and $C_1 - C_4$ heteroalkyl, wherein the alkyl, haloalkyl and heteroalkyl groups may be optionally substituted.

5 28. A compound according to claim 27, wherein R^4 is selected from the group of hydrogen and optionally substituted $C_1 - C_2$ alkyl.

29. A compound according to claim 1, wherein R^{13} is selected from the group of CF_3 , CF_2Cl , CF_2H , CFH_2 , CH_2CF_3 , CH_2CF_2Cl , CH_2CCl_2F , $C_1 - C_6$ alkyl, $C_3 - C_6$ cycloalkyl,
10 $C_1 - C_6$ haloalkyl, $C_1 - C_6$ heteroalkyl, $C_2 - C_6$ alkenyl, $C_2 - C_6$ alkynyl, aryl, heteroaryl, arylalkyl and heteroarylalkyl, wherein the alkyl, cycloalkyl, haloalkyl, heteroalkyl, alkenyl, alkynyl, aryl, heteroaryl, arylalkyl and heteroarylalkyl groups may be optionally substituted;
or

R^6 and R^{13} taken together form a five to seven membered saturated or unsaturated
15 heterocyclic ring.

30. A compound according to claim 29, wherein R^{13} is selected from the group of CF_3 , CF_2Cl , CF_2H , CFH_2 , CH_2CF_3 , CH_2CF_2Cl , CH_2CCl_2F , $C_1 - C_4$ alkyl, $C_1 - C_4$ haloalkyl, $C_1 - C_4$ heteroalkyl, $C_2 - C_4$ alkenyl and aryl, wherein the alkyl, haloalkyl, heteroalkyl,
20 alkenyl and aryl groups may be optionally substituted; or

R^6 and R^{13} taken together form a five to six membered saturated or unsaturated heterocyclic ring.

31. A compound according to claim 30, wherein R^{13} is selected from the group of CF_3 , CF_2Cl , CF_2H , CFH_2 , CH_2CF_3 , CH_2CF_2Cl , CH_2CCl_2F , methyl, ethyl, propyl, isopropyl, isobutyl, cyclopropylmethyl, allyl; or

R^6 and R^{13} taken together form a five membered saturated or unsaturated heterocyclic ring.

32. A compound according to claim 1, wherein R^{18} is selected from the group of hydrogen, F, Cl, OR^{16} , SR^{16} , $NR^{16}R^{17}$, $C_1 - C_4$ alkyl, $C_1 - C_4$ haloalkyl and $C_1 - C_4$ heteroalkyl, wherein the alkyl, haloalkyl and heteroalkyl groups may be optionally substituted.

33. A compound according to claim 32, wherein R^{18} is selected from the group of hydrogen, F, Cl, OR^{16} , SR^{16} and $NR^{16}R^{17}$.

34. A compound according to claim 33, wherein R^{18} is selected from the group of hydrogen, F, Cl and OR^{16} .

35. A compound according to claim 1, wherein R^{19} is selected from the group of hydrogen, $C_1 - C_4$ alkyl, $C_1 - C_4$ haloalkyl and $C_1 - C_4$ heteroalkyl, wherein the alkyl, haloalkyl and heteroalkyl groups may be optionally substituted.

36. A compound according to claim 35, wherein R^{19} is selected from the group of hydrogen and optionally substituted $C_1 - C_4$ alkyl.

37. A compound according to claim 1, wherein m is 0 or 1.

38. A compound according to claim 37, wherein m is 1.

39. A compound according to claim 1, wherein W is selected from the group of NH, $N\{R^{13}\}$, $N\{C(Y)R^{11}\}$ and $N\{SO_2R^{11}\}$.

40. A compound according to claim 39, wherein W is NH or $N\{R^{13}\}$.

41. A compound according to claim 1, wherein X is selected from the group of O, S, NH and N{R¹¹}.

42. A compound according to claim 41, wherein X is O or S.

43. A compound according to claim 1, wherein Y is O or S.

44. A compound according to claim 43, wherein Y is O.

45. A compound according to claim 1, wherein Z is selected from the group of NH, N{R¹¹} and O.

46. A compound according to claim 45, wherein Z is NH or N{R¹¹}.

47. A compound according to claim 1, wherein V is S.

48. A compound according to claim 1, wherein V is O.

49. A compound according to claim 1, wherein:

R¹ is selected from the group of hydrogen, F, Cl, OR⁹, S(O)_nR⁹, NR¹⁰R¹¹, C₁ – C₄ alkyl, C₁ – C₄ haloalkyl and C₁ – C₄ heteroalkyl, wherein the alkyl, haloalkyl and heteroalkyl groups may be optionally substituted;

R² is selected from the group of hydrogen, F, Cl, Br, I, CF₃, CF₂Cl, CF₂H, CFH₂, CF₂OR⁹, CH₂OR⁹, OR⁹, S(O)_nR⁹, C₁ – C₆ alkyl, C₁ – C₆ haloalkyl, C₁ – C₆ heteroalkyl, C₂ – C₆ alkynyl and C₂ – C₆ alkenyl, wherein the alkyl, haloalkyl, heteroalkyl, alkynyl and alkenyl groups may be optionally substituted

R^3 is selected from the group of hydrogen, $C_1 - C_6$ alkyl, $C_1 - C_6$ haloalkyl, $C_1 - C_6$ heteroalkyl, $C(Y)OR^{11}$ and $C(Y)NR^{10}R^{11}$, wherein the alkyl, haloalkyl and heteroalkyl groups may be optionally substituted; or

R^3 and R^6 taken together form a three to eight membered saturated or unsaturated carbocyclic ring;

R^5 is selected from the group of hydrogen, CF_3 , CF_2Cl , CF_2H , CFH_2 , $C_1 - C_6$ alkyl, $C_1 - C_6$ haloalkyl, $C_1 - C_6$ heteroalkyl, $C_2 - C_6$ alkynyl and $C_2 - C_6$ alkenyl, wherein the alkyl, haloalkyl, heteroalkyl, alkynyl and alkenyl groups may be optionally substituted;

R^6 is selected from the group of hydrogen, CF_3 , CF_2Cl , CF_2H , CFH_2 , $C_1 - C_6$ alkyl, $C_1 - C_6$ haloalkyl, $C_1 - C_6$ heteroalkyl, aryl, arylalkyl, heteroaryl, $C_2 - C_6$ alkynyl and $C_2 - C_6$ alkenyl, wherein the alkyl, haloalkyl, heteroalkyl, aryl, arylalkyl, heteroaryl, alkynyl and alkenyl groups may be optionally substituted; or

R^6 and R^{13} taken together form a five to seven membered saturated or unsaturated heterocyclic ring.

15

50. A compound according to claim 49, wherein:

R^7 is selected from the group of hydrogen, F, Cl, $C_1 - C_4$ alkyl, $C_1 - C_4$ haloalkyl and $C_1 - C_4$ heteroalkyl, wherein the alkyl, haloalkyl and heteroalkyl groups may be optionally substituted;

R^8 is selected from the group of hydrogen, F, Cl, $C_1 - C_4$ alkyl, $C_1 - C_4$ haloalkyl and $C_1 - C_4$ heteroalkyl, wherein the alkyl, haloalkyl and heteroalkyl groups may be optionally substituted;

R^{13} is selected from the group of CF_3 , CF_2Cl , CF_2H , CFH_2 , CH_2CF_3 , CH_2CF_2Cl , CH_2CCl_2F , $C_1 - C_6$ alkyl, $C_1 - C_6$ haloalkyl, $C_1 - C_6$ heteroalkyl, $C_3 - C_6$ cycloalkyl, $C_2 - C_6$ alkenyl, $C_2 - C_6$ alkynyl, aryl, heteroaryl, arylalkyl and heteroarylalkyl, wherein the alkyl, haloalkyl, heteroalkyl, cycloalkyl, alkenyl, alkynyl, aryl, heteroaryl, arylalkyl, and heteroarylalkyl groups may be optionally substituted; or

R^6 and R^{13} taken together form a five to seven membered saturated or unsaturated heterocyclic ring; and

R^{18} is selected from the group of hydrogen, F, Cl, OR^{16} , SR^{16} , $NR^{16}R^{17}$, $C_1 - C_4$ alkyl, $C_1 - C_4$ haloalkyl and $C_1 - C_4$ heteroalkyl, wherein the alkyl, haloalkyl, heteroalkyl groups
5 may be optionally substituted.

51. A compound according to claim 50, wherein:

m is 0 or 1;

W is selected from the group of NH, $N\{R^{13}\}$, $N\{C(Y)R^{11}\}$ and $N\{SO_2R^{11}\}$;

10 X is selected from the group of O, S, NH and $N\{R^{11}\}$;

Y is O or S; and

Z is selected from the group of NH, $N\{R^{11}\}$ and O.

52. A compound according to claim 1, wherein said compound is represented by
15 formula (I).

53. A compound according to claim 1, wherein said compound is represented by formula (II).

20 54. A compound according to claim 1, wherein said compound is represented by formula (III).

55. A compound according to claim 1, wherein said compound is represented by formula (IV).

25

56. A compound according to claim 1, wherein said compound is selected from the group of:

- (3R)-2,3,4,7-Tetrahydro-3-methyl-10-(trifluoromethyl)-8H-[1,4]oxazino[2,3-
f]quinolin-8-one;
- (3R)-2,3,4,7-Tetrahydro-3,4-dimethyl-10-(trifluoromethyl)-8H-[1,4]oxazino[2,3-
f]quinolin-8-one;
- 5 (3R)-4-Ethyl-2,3,4,7-tetrahydro-3-methyl-10-(trifluoromethyl)-8H-[1,4]oxazino[2,3-
f]quinolin-8-one;
- (3R)-2,3,4,7-Tetrahydro-3-methyl-4-(2,2,2-trifluoroethyl)-10-(trifluoromethyl)-8H-
[1,4]oxazino[2,3-f]quinolin-8-one;
- (3R)-2,3,4,7-Tetrahydro-3-methyl-4-propyl-10-(trifluoromethyl)-8H-[1,4]oxazino[2,3-
10 f]quinolin-8-one;
- (3R)-4-Allyl-2,3,4,7-tetrahydro-3-methyl-10-(trifluoromethyl)-8H-[1,4]oxazino[2,3-
f]quinolin-8-one;
- (3R)-3-Ethyl-2,3,4,7-tetrahydro-10-(trifluoromethyl)-8H-[1,4]oxazino[2,3-f]quinolin-
8-one;
- 15 (3R)-3-Ethyl-2,3,4,7-tetrahydro-4-methyl-10-(trifluoromethyl)-8H-[1,4]oxazino[2,3-
f]quinolin-8-one;
- (3R)-3,4-Diethyl-2,3,4,7-tetrahydro-10-(trifluoromethyl)-8H-[1,4]oxazino[2,3-
f]quinolin-8-one;
- (3R)-3-Ethyl-2,3,4,7-tetrahydro-4-(2,2,2-trifluoroethyl)-10-(trifluoromethyl)-8H-
20 [1,4]oxazino[2,3-f]quinolin-8-one;
- (3R)-4-(2-Chloro-2,2-difluoroethyl)-3-ethyl-2,3,4,7-tetrahydro-10-(trifluoromethyl)-
8H-[1,4]oxazino[2,3-f]quinolin-8-one;
- (3R)-4-(2,2-Difluoroethyl)-3-ethyl-2,3,4,7-tetrahydro-10-(trifluoromethyl)-8H-
[1,4]oxazino[2,3-f]quinolin-8-one;
- 25 (3R)-3-Ethyl-2,3,4,7-tetrahydro-4-propyl-10-(trifluoromethyl)-8H-[1,4]oxazino[2,3-
f]quinolin-8-one ;
- (3R)-4-Allyl-3-ethyl-2,3,4,7-tetrahydro-10-(trifluoromethyl)-8H-[1,4]oxazino[2,3-

wherein:

R^1 is selected from the group of hydrogen, F, Cl, Br, I, NO_2 , OR^9 , $\text{NR}^{10}\text{R}^{11}$, $\text{S}(\text{O})_n\text{R}^9$, $\text{C}_1 - \text{C}_8$ alkyl, $\text{C}_1 - \text{C}_8$ haloalkyl, $\text{C}_1 - \text{C}_8$ heteroalkyl, $\text{C}_3 - \text{C}_8$ cycloalkyl, aryl, arylalkyl, heteroaryl, $\text{C}_2 - \text{C}_8$ alkynyl and $\text{C}_2 - \text{C}_8$ alkenyl, wherein the alkyl, haloalkyl, heteroalkyl, cycloalkyl, aryl, arylalkyl, heteroaryl, alkynyl and alkenyl groups may be optionally substituted;

R^2 is selected from the group of hydrogen, F, Cl, Br, I, CF_3 , CF_2Cl , CF_2H , CFH_2 , CF_2OR^9 , CH_2OR^9 , OR^9 , $\text{S}(\text{O})_n\text{R}^9$, $\text{NR}^{10}\text{R}^{11}$, $\text{C}_1 - \text{C}_8$ alkyl, $\text{C}_1 - \text{C}_8$ haloalkyl, $\text{C}_1 - \text{C}_8$ heteroalkyl, $\text{C}_3 - \text{C}_8$ cycloalkyl, aryl, arylalkyl, heteroaryl, $\text{C}_2 - \text{C}_8$ alkynyl and $\text{C}_2 - \text{C}_8$ alkenyl, wherein the alkyl, haloalkyl, heteroalkyl, cycloalkyl aryl, arylalkyl, heteroaryl, alkynyl and alkenyl groups may be optionally substituted;

R^3 and R^4 each independently is selected from the group of hydrogen, OR^9 , $\text{S}(\text{O})_n\text{R}^9$, $\text{NR}^{10}\text{R}^{11}$, $\text{C}(\text{Y})\text{OR}^{11}$, $\text{C}(\text{Y})\text{NR}^{10}\text{R}^{11}$, $\text{C}_1 - \text{C}_8$ alkyl, $\text{C}_1 - \text{C}_8$ haloalkyl, $\text{C}_1 - \text{C}_8$ heteroalkyl, $\text{C}_3 - \text{C}_8$ cycloalkyl, aryl, arylalkyl, heteroaryl, $\text{C}_2 - \text{C}_8$ alkynyl and $\text{C}_2 - \text{C}_8$ alkenyl, wherein the alkyl, haloalkyl, heteroalkyl, cycloalkyl, aryl, arylalkyl, heteroaryl, alkynyl and alkenyl groups may be optionally substituted; or

R^3 and R^4 taken together form a three to eight membered saturated or unsaturated carbocyclic or heterocyclic ring; or

R^3 and R^5 taken together form a three to eight membered saturated or unsaturated carbocyclic ring; or

R^3 and R^6 taken together form a three to eight membered saturated or unsaturated carbocyclic ring; or

R^3 and R^{13} taken together form a three to eight membered saturated or unsaturated heterocyclic ring;

5 R^5 and R^6 each independently are selected from the group of hydrogen, CF_3 , CF_2Cl , CF_2H , CFH_2 , $C_1 - C_8$ alkyl, $C_1 - C_8$ haloalkyl, $C_1 - C_8$ heteroalkyl, $C_3 - C_8$ cycloalkyl, aryl, arylalkyl, heteroaryl, $C_2 - C_8$ alkynyl and $C_2 - C_8$ alkenyl, wherein the alkyl, haloalkyl, heteroalkyl, cycloalkyl, aryl, arylalkyl, heteroaryl, alkynyl and alkenyl groups may be optionally substituted; or

10 R^5 and R^6 taken together form a three to eight membered saturated or unsaturated carbocyclic ring; or

R^5 and R^{13} taken together form a three to eight membered saturated or unsaturated heterocyclic ring; or

15 R^6 and R^{13} taken together form a three to eight membered saturated or unsaturated heterocyclic ring;

R^7 is selected from the group of hydrogen, F, Cl, Br, I, $C_1 - C_8$ alkyl, $C_1 - C_8$ haloalkyl, $C_1 - C_8$ heteroalkyl, aryl, heteroaryl, OR^9 , $S(O)_nR^9$, $NR^{10}R^{11}$, $C(Y)OR^{11}$ and $C(Y)NR^{10}R^{11}$, wherein the alkyl, haloalkyl, heteroalkyl, aryl and heteroaryl groups may be optionally substituted;

20 R^8 is selected from the group of hydrogen, F, Cl, Br, I, $C_1 - C_8$ alkyl, $C_1 - C_8$ haloalkyl, $C_1 - C_8$ heteroalkyl, aryl, heteroaryl, OR^9 , $S(O)_nR^9$, $NR^{10}R^{11}$, $C(Y)OR^{11}$ and $C(Y)NR^{10}R^{11}$, wherein the alkyl, haloalkyl, heteroalkyl, aryl and heteroaryl groups may be optionally substituted;

25 R^9 is selected from the group of hydrogen, $C_1 - C_8$ alkyl, $C_1 - C_8$ haloalkyl, $C_1 - C_8$ heteroalkyl, aryl, heteroaryl and arylalkyl, wherein the alkyl, haloalkyl, heteroalkyl, aryl, heteroaryl and arylalkyl groups may be optionally substituted;

R^{10} is selected from the group of hydrogen, $C_1 - C_8$ alkyl, $C_1 - C_8$ haloalkyl, $C_1 - C_8$ heteroalkyl, aryl, heteroaryl, arylalkyl, CO_2R^{12} , $C(O)R^{12}$, SO_2R^{12} and $S(O)R^{12}$, wherein the

alkyl, haloalkyl, heteroalkyl, aryl, heteroaryl and arylalkyl groups may be optionally substituted;

R^{11} and R^{12} each independently is selected from the group of hydrogen, $C_1 - C_8$ alkyl, $C_1 - C_8$ haloalkyl, $C_1 - C_8$ heteroalkyl, aryl, heteroaryl and arylalkyl, wherein the alkyl,

5 haloalkyl, heteroalkyl, aryl, heteroaryl and arylalkyl groups may be optionally substituted;

R^{13} is selected from the group of $C_1 - C_8$ alkyl, $C_1 - C_8$ haloalkyl, $C_1 - C_8$ heteroalkyl, $C_2 - C_8$ alkenyl, $C_2 - C_8$ alkynyl, $C_3 - C_8$ cycloalkyl, aryl, heteroaryl, arylalkyl and heteroarylalkyl, wherein the alkyl, haloalkyl, heteroalkyl, alkenyl, alkynyl, cycloalkyl, aryl, heteroaryl, arylalkyl and heteroarylalkyl groups may be optionally substituted;

10 R^{16} is selected from the group of hydrogen, $C_1 - C_8$ alkyl, $C_1 - C_8$ haloalkyl, $C_1 - C_8$ heteroalkyl, COR^{17} , CO_2R^{17} and $CONR^{12}R^{17}$, wherein the alkyl, haloalkyl and heteroalkyl groups may be optionally substituted;

R^{17} is selected from the group of hydrogen, $C_1 - C_8$ alkyl, $C_1 - C_8$ haloalkyl and $C_1 - C_8$ heteroalkyl, wherein the alkyl, haloalkyl and heteroalkyl groups may be optionally

15 substituted;

R^{18} is selected from the group of hydrogen, F, Br, Cl, I, CN, $C_1 - C_8$ alkyl, $C_1 - C_8$ haloalkyl, $C_1 - C_8$ heteroalkyl, OR^{16} , $NR^{16}R^{17}$, SR^{16} , CH_2R^{16} , COR^{17} , CO_2R^{17} , $CONR^{16}R^{17}$, SOR^{17} and SO_2R^{17} , wherein the alkyl, haloalkyl and heteroalkyl groups may be optionally substituted;

20 R^{19} is selected from the group of hydrogen, $C_1 - C_8$ alkyl, $C_1 - C_8$ haloalkyl, $C_1 - C_8$ heteroalkyl, $C_2 - C_8$ alkenyl, $C_2 - C_8$ alkynyl, $C_3 - C_8$ cycloalkyl, aryl, heteroaryl, arylalkyl and heteroarylalkyl, wherein the alkyl, haloalkyl, heteroalkyl, alkenyl, alkynyl, cycloalkyl, aryl, heteroaryl, arylalkyl and heteroarylalkyl groups may be optionally substituted;

m is selected from the group of 0, 1 and 2;

25 n is selected from the group of 0, 1 and 2;

V is selected from the group of O and S;

W is selected from the group of O, $S(O)_n$, NH, $N\{R^{13}\}$, $N\{C(Y)R^{11}\}$ and $N\{SO_2R^{11}\}$;

X and Z each independently is selected from the group of O, S(O)_n, NH, N{R¹¹},
N{C(Y)R¹¹}, N{SO₂R¹²} and N{S(O)R¹²}; and

Y is selected from the group of O, S, N{R¹⁹} and N{OR¹⁹};

and pharmaceutically acceptable salts thereof.

5

59. A pharmaceutical composition according to claim 58, wherein said
composition is suitable for enteral, parenteral, suppository or topical administration.

60. A pharmaceutical composition according to claim 58, wherein R¹ is selected
10 from the group of hydrogen, F, Cl, OR⁹, NR¹⁰R¹¹, S(O)_nR⁹, C₁ - C₄ alkyl, C₁ - C₄ haloalkyl
and C₁ - C₄ heteroalkyl, wherein the alkyl, haloalkyl and heteroalkyl groups may be
optionally substituted.

61. A pharmaceutical composition according to claim 1, wherein R² is selected
15 from the group of hydrogen, F, Cl, Br, I, CF₃, CF₂Cl, CF₂H, CFH₂, CF₂OR⁹, CH₂OR⁹, OR⁹,
S(O)_nR⁹, C₁ - C₆ alkyl, C₁ - C₆ haloalkyl, C₁ - C₆ heteroalkyl, C₂ - C₆ alkynyl and C₂ - C₆
alkenyl, wherein the alkyl, haloalkyl, heteroalkyl, alkynyl and alkenyl groups may be
optionally substituted.

20 62. A pharmaceutical composition according to claim 59, wherein
R¹ is selected from the group of hydrogen, F and optionally substituted C₁ - C₄ alkyl;
and

R² is selected from the group of hydrogen, C₁ - C₂ alkyl, C₁ - C₂ haloalkyl and C₁ -
C₂ heteroalkyl, wherein the alkyl, haloalkyl and heteroalkyl groups may be optionally
25 substituted.

63. A pharmaceutical composition according to claim 58, wherein R³ is selected
from the group of hydrogen, C₁ - C₆ alkyl, C₁ - C₆ haloalkyl, C₁ - C₆ heteroalkyl, C(Y)OR¹¹

and C(Y)NR¹⁰R¹¹, wherein the alkyl, haloalkyl and heteroalkyl groups may be optionally substituted; or

R³ and R⁶ taken together form a three to eight membered saturated or unsaturated carbocyclic ring.

5

64. A pharmaceutical composition according to claim 58, wherein R⁶ is selected from the group of hydrogen, CF₃, CF₂Cl, CF₂H, CFH₂, C₁ – C₆ alkyl, C₁ – C₆ haloalkyl, C₁ – C₆ heteroalkyl, aryl, arylalkyl, heteroaryl, C₂ – C₆ alkynyl and C₂ – C₆ alkenyl, wherein the alkyl, heteroalkyl, haloalkyl, aryl, arylalkyl, heteroaryl, alkynyl and alkenyl groups may be
10 optionally substituted.

65. A pharmaceutical composition according to claim 64, wherein R⁶ is selected from the group of hydrogen, CF₃, CF₂Cl, CF₂H, CFH₂, C₁ – C₄ alkyl, C₁ – C₄ haloalkyl, C₁ – C₄ heteroalkyl, C₂ – C₄ alkynyl and C₂ – C₄ alkenyl, wherein the alkyl, heteroalkyl, haloalkyl,
15 alkynyl and alkenyl groups may be optionally substituted.

66. A pharmaceutical composition according to claim 58, wherein R⁵ is selected from the group of hydrogen, CF₃, CF₂Cl, CF₂H, CFH₂, C₁ – C₆ alkyl, C₁ – C₆ haloalkyl, C₁ – C₆ heteroalkyl, C₂ – C₆ alkynyl and C₂ – C₆ alkenyl, wherein the alkyl, haloalkyl, heteroalkyl,
20 alkynyl and alkenyl groups may be optionally substituted.

67. A pharmaceutical composition according to claim 66, wherein R⁵ is selected from the group of hydrogen, CF₃, CF₂Cl, CF₂H, CFH₂, C₁ – C₄ alkyl, C₁ – C₄ haloalkyl and C₁ – C₄ heteroalkyl, wherein the alkyl, haloalkyl and heteroalkyl groups may be optionally
25 substituted.

68. A pharmaceutical composition according to claim 58, wherein R⁷ and R⁸ each independently is selected from the group of hydrogen, F, Cl, C₁ – C₄ alkyl, C₁ – C₄ haloalkyl

and C₁ – C₄ heteroalkyl, wherein the alkyl, haloalkyl and heteroalkyl groups may be optionally substituted.

69. A pharmaceutical composition according to claim 58, wherein
5 R⁹ is selected from the group of hydrogen, C₁ – C₆ alkyl, C₁ – C₆ haloalkyl, C₁ – C₆ heteroalkyl, wherein the alkyl, haloalkyl and heteroalkyl groups may be optionally substituted; and

R¹⁰ is selected from the group of hydrogen, S(O)R¹², SO₂R¹², C(O)R¹², CO₂R¹², C₁ – C₆ alkyl, C₁ – C₆ haloalkyl and C₁ – C₆ heteroalkyl, wherein the alkyl, haloalkyl and
10 heteroalkyl groups may be optionally substituted.

70. A pharmaceutical composition according to claim 58, wherein R⁴ is selected from the group of hydrogen, C₁ – C₄ alkyl, C₁ – C₄ haloalkyl and C₁ – C₄ heteroalkyl, wherein the alkyl, haloalkyl and heteroalkyl groups may be optionally substituted.

15 71. A pharmaceutical composition according to claim 58, wherein R¹³ is selected from the group of CF₃, CF₂Cl, CF₂H, CFH₂, CH₂CF₃, CH₂CF₂Cl, CH₂CCl₂F, C₁ – C₆ alkyl, C₁ – C₆ haloalkyl, C₁ – C₆ heteroalkyl, C₂ – C₆ alkenyl, C₂ – C₆ alkynyl, C₃ – C₆ cycloalkyl, aryl, heteroaryl, arylalkyl and heteroarylalkyl, wherein the alkyl, haloalkyl, heteroalkyl, alkenyl, alkynyl, cycloalkyl, aryl, heteroaryl, arylalkyl and heteroarylalkyl groups may be
20 optionally substituted; or

R⁶ and R¹³ taken together form a five to seven membered saturated or unsaturated heterocyclic ring.

25 72. A pharmaceutical composition according to claim 71, wherein R¹³ is selected from the group of CF₃, CF₂Cl, CF₂H, CFH₂, CH₂CF₃, CH₂CF₂Cl, CH₂CCl₂F, methyl, ethyl, propyl, isopropyl, isobutyl, cyclopropylmethyl, allyl; or

R⁶ and R¹³ taken together form a five membered saturated or unsaturated heterocyclic ring.

73. A pharmaceutical composition according to claim 58, wherein R¹⁸ is selected
5 from the group of hydrogen, F, Cl, OR¹⁶, SR¹⁶, NR¹⁶R¹⁷, C₁ – C₄ alkyl, C₁ – C₄ haloalkyl and
C₁ – C₄ heteroalkyl, wherein the alkyl, haloalkyl and heteroalkyl groups may be optionally
substituted.

74. A pharmaceutical composition according to claim 58, wherein R¹⁹ is selected
10 from the group of hydrogen, C₁ – C₄ alkyl, C₁ – C₄ haloalkyl and C₁ – C₄ heteroalkyl, wherein
the alkyl, haloalkyl and heteroalkyl groups may be optionally substituted.

75. A pharmaceutical composition according to claim 58, wherein m is 0 or 1.

15 76. A pharmaceutical composition according to claim 58, wherein
W is selected from the group of NH, N{R¹³}, N{C(Y)R¹¹} and N{SO₂R¹¹}; and
X is selected from the group of O, S, NH and N{R¹¹}.

77. A pharmaceutical composition according to claim 58, wherein
20 Y is O or S; and
Z is selected from the group of NH, N{R¹¹} and O.

78. A method of determining the presence of an androgen receptor (AR) in a cell
or cell extract comprising: (a) labeling a compound according to any one of claims 1, 56 or
25 57; (b) contacting the cell or cell extract with said labeled compound; and (c) testing the
contacted cell or cell extract to determine the presence of AR.

79. A method for purifying a sample containing an androgen receptor *in vitro*, comprising: (a) contacting said sample with a compound according to any one of claims 1, 56 or 57; (b) allowing said compound to bind to said androgen receptor to form a bound compound/receptor combination; and (c) isolating said bound compound/receptor
5 combination.

80. A method of treating an individual having a condition mediated by an androgen receptor comprising administering to said individual a pharmaceutically effective amount of a compound according to any one of claims 1, 56, or 57.
10

81. A method according to claim 80, wherein said compound is represented by formula (I).

82. A method according to claim 80, wherein said compound is represented by
15 formula (II).

83. A method according to claim 80, wherein said compound is represented by formula (III).

20 84. A method according to claim 80, wherein said compound is represented by formula (IV).

85. A method according to claim 80, wherein said condition is selected from the group of acne, male-pattern baldness, sexual dysfunction, impotence, wasting diseases,
25 hirsutism, hypogonadism, prostatic hyperplasia, osteoporosis, cancer cachexia, and hormone-dependent cancers.

86. A method according to claim 80, wherein said condition is alleviated with a therapy selected from the group of male hormone replacement therapy, female androgen replacement therapy and stimulation of hematopoiesis.

5 87. A method of modulating an androgen receptor in an individual comprising administering to said individual an androgen receptor modulating effective amount of a compound according to any one of claims 1, 56, or 57.

88. A method according to claim 87, wherein said individual has a condition
10 mediated by an androgen receptor.

89. A method according to claim 87, wherein said condition is selected from the group of acne, male-pattern baldness, sexual dysfunction, impotence, wasting diseases, hirsutism, hypogonadism, prostatic hyperplasia, osteoporosis, cancer cachexia, hormone-
15 dependent cancers and a process mediated by an anabolic agent.

90. A method according to claim 87, wherein said condition is alleviated with a therapy selected from the group of male hormone replacement therapy, female androgen replacement therapy and stimulation of hematopoiesis.

20 91. A method according to claim 87, wherein said modulation is activation.

92. A method according to claim 91, wherein said individual has a condition mediated by an androgen receptor.

25 93. A method according to claim 92, wherein said condition is selected from the group of acne, male-pattern baldness, sexual dysfunction, impotence, wasting diseases,

hirsutism, hypogonadism, prostatic hyperplasia, osteoporosis, cancer cachexia, hormone-dependent cancers and a process mediated by an anabolic agent.

94. A method according to claim 92, wherein said condition is alleviated with a
5 therapy selected from the group of male hormone replacement therapy, female androgen replacement therapy and stimulation of hematopoiesis.

95. A method according to claim 91, wherein said compound provides 50%
maximal activation of AR at a drug concentration of less than 100 nM.
10

96. A method according to claim 91, wherein said compound provides 50%
maximal activation of AR at a drug concentration of less than 50 nM.

97. A method according to claim 91, wherein said compound provides 50%
15 maximal activation of AR at a drug concentration of less than 20 nM.

98. A method according to claim 91, wherein said compound provides 50%
maximal activation of AR at a drug concentration of less than 10 nM.

20 99. A method according to claim 87, wherein said modulation is inhibition.

100. A method according to claim 99, wherein said individual has a condition
mediated by an androgen receptor.

25 101. A method according to claim 100, wherein said condition is selected from the
group of acne, male-pattern baldness, sexual dysfunction, impotence, wasting diseases,
hirsutism, hypogonadism, prostatic hyperplasia, osteoporosis, cancer cachexia, hormone-
dependent cancers and a process mediated by an anabolic agent.

101. A method according to claim 100, wherein said condition is alleviated with a therapy selected from the group of male hormone replacement therapy, female androgen replacement therapy and stimulation of hematopoiesis.

5

103. A method according to claim 99, wherein said compound provides 50% maximal inhibition of AR at a drug concentration of less than 100 nM.

104. A method according to claim 99, wherein said compound provides 50%
10 maximal inhibition of AR at a drug concentration of less than 50 nM.

105. A method according to claim 99, wherein said compound provides 50% maximal inhibition of AR at a drug concentration of less than 20 nM.

15 106. A method according to claim 99, wherein said compound provides 50% maximal inhibition of AR at a drug concentration of less than 10 nM.

107. A method of treating cancer, comprising administering to a patient in need thereof a pharmaceutically effective amount of a compound according to any one of claims 1,
20 56 or 57.

Applicant is respectfully requested to supply an amended declaration because the handwritten alterations to the oath by inventor Caferro were not properly initialed and dated.

An Examiner's Amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 C.F.R. §1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the Issue Fee.

In claim 46, the term "claim 45" was amended to read
-- claim 1 --.

In claim 56 at line 108, the term -- and -- was added at the end of the line.

In claim 56 at line 111, the term "a pharmaceutically acceptable salt" was amended to read -- pharmaceutically acceptable salts --.

In claim 57 at line 25, the term -- and -- was added at the end of the line.

In claim 57 at line 28, the term "a pharmaceutically acceptable salt" was amended to read -- pharmaceutically acceptable salts --.

In claim 58 at line 67, the entire line was deleted in favor of the term -- m is 1; --.

Claim 75 was cancelled.

In claim 108 at line 4, the term "and o" was amended to read
-- and --.

Authorization for this Examiner's Amendment was given in a telephone interview with Frank Miskiel on August 21, 2006

AMENDMENT AND RESPONSE AFTER FINAL

Dear Sir:

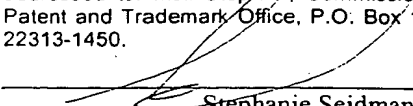

Responsive to the Final Office Action, mailed January 25, 2006, entry and consideration of the following amendments and remarks are respectfully requested. It is respectfully submitted that the amendments and arguments presented below either place the application into condition for allowance or reduce the number of issues for appeal. For example, claims 1 and 58 are amended to define the substituents of the optionally substituted groups, obviating the rejections under 35 U.S.C. 112, first and second paragraphs. Claims 1 and 58 also are amended to separate the substituents for variables X and Z, as suggested by the Examiner in the rejection under 35 U.S.C. 112, first paragraph. Claims 1, 9, 29-31, 49, 50, 58, 63, 71 and 72 are amended to cancel subject matter directed to substituents that when taken together form a carbocyclic or heterocyclic ring, obviating the rejection under 35 U.S.C. 112, first paragraph.

Amendments to the claims are reflected in the listing of the claims which begin on page 2 of this paper.

Remarks/Arguments begin on page 22 of this paper.

Claims 1-9, 11-31, 37-40, 46, 49-51, 56-72, 75-77 and 108 are pending. Claims 10, 41, 42 and 45 are cancelled herein without prejudice or disclaimer. Please amend claims 1, 9, 29-31, 49-51, 58, 63, 71, 72, 76 and 77 as indicated. New claim 108 is added herein. This listing of claims will replace all prior versions, and listings of claims, in the application.

1. (Currently amended) A compound having the formula:

R¹ is selected from the group consisting of hydrogen, F, Cl, Br, I, NO₂, OR⁹, NR¹⁰R¹¹, S(O)_nR⁹, optionally substituted C₁ – C₈ alkyl, optionally substituted C₁ – C₈ haloalkyl, optionally substituted C₁ – C₈ heteroalkyl, optionally substituted C₃ – C₈ cycloalkyl, optionally substituted aryl, optionally substituted arylalkyl, optionally substituted heteroaryl, optionally substituted C₂ – C₈ alkynyl and optionally substituted C₂ – C₈ alkenyl;

R^2 is selected from the group consisting of hydrogen, F, Cl, Br, I, CF_3 , CF_2Cl , CF_2H , CFH_2 , CF_2OR^9 , CH_2OR^9 , OR^9 , $S(O)_nR^9$, $NR^{10}R^{11}$, optionally substituted $C_1 - C_8$ alkyl, optionally substituted $C_1 - C_8$ haloalkyl, optionally substituted $C_1 - C_8$ heteroalkyl, optionally substituted $C_3 - C_8$ cycloalkyl, optionally substituted aryl, optionally substituted arylalkyl, optionally substituted heteroaryl, optionally substituted $C_2 - C_8$ alkynyl and optionally substituted $C_2 - C_8$ alkenyl;

R^3 and R^4 each independently is selected from the group consisting of hydrogen, OR^9 , $S(O)_nR^9$, $NR^{10}R^{11}$, $C(Y)OR^{11}$, $C(Y)NR^{10}R^{11}$, optionally substituted $C_1 - C_8$ alkyl, optionally substituted $C_1 - C_8$ haloalkyl, optionally substituted $C_1 - C_8$ heteroalkyl, optionally substituted $C_3 - C_8$ cycloalkyl, optionally substituted aryl, optionally substituted arylalkyl, optionally substituted heteroaryl, optionally substituted $C_2 - C_8$ alkynyl and optionally substituted $C_2 - C_8$ alkenyl; or

~~R³ and R⁴ taken together form a three to eight membered saturated or unsaturated carbocyclic or heterocyclic ring; or~~

~~R³ and R⁵ taken together form a three to eight membered saturated or unsaturated carbocyclic ring; or~~

~~R³ and R⁶ taken together form a three to eight membered saturated or unsaturated carbocyclic ring; or~~

~~R³ and R¹³ taken together form a three to eight membered saturated or unsaturated heterocyclic ring;~~

R⁵ and R⁶ each independently is selected from the group consisting of hydrogen, CF₃, CF₂Cl, CF₂H, CFH₂, optionally substituted C₁ – C₈ alkyl, optionally substituted C₁ – C₈ haloalkyl, optionally substituted C₁ – C₈ heteroalkyl, optionally substituted C₃ – C₈ cycloalkyl, optionally substituted aryl, optionally substituted arylalkyl, optionally substituted heteroaryl, optionally substituted C₂ – C₈ alkynyl and optionally substituted C₂ – C₈ alkenyl; or

~~R⁵ and R⁶ taken together form a three to eight membered saturated or unsaturated carbocyclic ring; or~~

~~R⁵ and R¹³ taken together form a three to eight membered saturated or unsaturated heterocyclic ring; or~~

~~R⁶ and R¹³ taken together form a three to eight membered saturated or unsaturated heterocyclic ring;~~

R⁷ is selected from the group consisting of hydrogen, F, Cl, Br, I, optionally substituted C₁ – C₈ alkyl, optionally substituted C₁ – C₈ haloalkyl, optionally substituted C₁ – C₈ heteroalkyl, optionally substituted aryl, optionally substituted heteroaryl, OR⁹, S(O)_nR⁹, NR¹⁰R¹¹, C(Y)OR¹¹ and C(Y)NR¹⁰R¹¹;

R⁸ is selected from the group consisting of hydrogen, F, Cl, Br, I, optionally substituted C₁ – C₈ alkyl, optionally substituted C₁ – C₈ haloalkyl, optionally substituted C₁ – C₈ heteroalkyl, optionally substituted aryl, optionally substituted heteroaryl, OR⁹, S(O)_nR⁹, NR¹⁰R¹¹, C(Y)OR¹¹ and C(Y)NR¹⁰R¹¹;

R⁹ is selected from the group consisting of hydrogen, optionally substituted C₁ – C₈ alkyl, optionally substituted C₁ – C₈ haloalkyl, optionally substituted C₁ – C₈ heteroalkyl, optionally substituted aryl, optionally substituted heteroaryl and optionally substituted arylalkyl;

R¹⁰ is selected from the group consisting of hydrogen, optionally substituted C₁ – C₈ alkyl, optionally substituted C₁ – C₈ haloalkyl, optionally substituted C₁ – C₈ heteroalkyl,

optionally substituted aryl, optionally substituted heteroaryl, optionally substituted arylalkyl, CO_2R^{12} , C(O)R^{12} , SO_2R^{12} and S(O)R^{12} ;

R^{11} and R^{12} each independently is selected from the group consisting of hydrogen, optionally substituted $\text{C}_1 - \text{C}_8$ alkyl, optionally substituted $\text{C}_1 - \text{C}_8$ haloalkyl, optionally substituted $\text{C}_1 - \text{C}_8$ heteroalkyl, optionally substituted aryl, optionally substituted heteroaryl and optionally substituted arylalkyl;

R^{13} is selected from the group consisting of optionally substituted $\text{C}_1 - \text{C}_8$ alkyl, optionally substituted $\text{C}_1 - \text{C}_8$ haloalkyl, optionally substituted $\text{C}_1 - \text{C}_8$ heteroalkyl, optionally substituted $\text{C}_2 - \text{C}_8$ alkenyl, optionally substituted $\text{C}_2 - \text{C}_8$ alkynyl, optionally substituted $\text{C}_3 - \text{C}_8$ cycloalkyl, optionally substituted aryl, optionally substituted heteroaryl, optionally substituted arylalkyl and optionally substituted heteroarylalkyl;

m is selected from the group consisting of 0, 1 and 2;

n is selected from the group consisting of 0, 1 and 2;

W is selected from the group consisting of S(O)_n , NH , $\text{N}\{\text{R}^{13}\}$, $\text{N}\{\text{C(Y)R}^{11}\}$ and $\text{N}\{\text{SO}_2\text{R}^{11}\}$;

X and Z each independently is selected from the group consisting of O , NH , $\text{N}\{\text{R}^{11}\}$, $\text{N}\{\text{C(Y)R}^{11}\}$, $\text{N}\{\text{SO}_2\text{R}^{12}\}$ and $\text{N}\{\text{S(O)R}^{12}\}$;

Z is selected from the group consisting of NH , $\text{N}\{\text{R}^{11}\}$, $\text{N}\{\text{C(Y)R}^{11}\}$, $\text{N}\{\text{SO}_2\text{R}^{12}\}$ and $\text{N}\{\text{S(O)R}^{12}\}$; and

Y is O ;

and pharmaceutically acceptable salts thereof; wherein:

the substituents of an optionally substituted group comprise one or more substituents independently selected from among alkyl, alkenyl, alkynyl, heteroalkyl, haloalkyl, haloalkenyl, haloalkynyl, cycloalkyl, aryl, heteroaryl, arylalkyl, heteroarylalkyl, alkoxy, aryloxy, haloalkoxy, amino, alkylamino, dialkylamino, alkylthio, arylthio, heteroarylthio, oxo, carboxyester, carboxamido, acyloxy, hydrogen, F, Cl, Br, I, CN, NO_2 , NH_2 , N_3 , NHCH_3 , $\text{N}(\text{CH}_3)_2$, SH , SCH_3 , OH , OCH_3 , OCF_3 , CH_3 , CF_3 , C(O)CH_3 , CO_2CH_3 , CO_2H , C(O)NH_2 , OR^9 , SR^9 , $\text{NR}^{10}\text{R}^{11}$, CF_2CF_3 , $\text{CH}_2\text{CH}_2\text{F}$ and CH_2CF_3 .

2. (Previously presented) A compound according to claim 1, wherein R^1 is selected from the group consisting of hydrogen, F, Cl, OR^9 , $\text{NR}^{10}\text{R}^{11}$, $\text{S(O)}_n\text{R}^9$, optionally substituted $\text{C}_1 - \text{C}_4$ alkyl, optionally substituted $\text{C}_1 - \text{C}_4$ haloalkyl and optionally substituted $\text{C}_1 - \text{C}_4$ heteroalkyl.

3. (Previously presented) A compound according to claim 2, wherein R^1 is selected from the group consisting of hydrogen, F, Cl, optionally substituted $C_1 - C_4$ alkyl, optionally substituted $C_1 - C_4$ haloalkyl and optionally substituted $C_1 - C_4$ heteroalkyl.

4. (Previously presented) A compound according to claim 3, wherein R^1 is selected from the group consisting of hydrogen, F and optionally substituted $C_1 - C_4$ alkyl.

5. (Previously presented) A compound according to claim 1, wherein R^2 is selected from the group consisting of hydrogen, F, Cl, Br, I, CF_3 , CF_2Cl , CF_2H , CFH_2 , CF_2OR^9 , CH_2OR^9 , OR^9 , $S(O)_nR^9$, optionally substituted $C_1 - C_6$ alkyl, optionally substituted $C_1 - C_6$ haloalkyl, optionally substituted $C_1 - C_6$ heteroalkyl, optionally substituted $C_2 - C_6$ alkynyl and optionally substituted $C_2 - C_6$ alkenyl.

6. (Previously presented) A compound according to claim 5, wherein R^2 is selected from the group consisting of hydrogen, F, Cl, CF_3 , CF_2Cl , CF_2H , CFH_2 , optionally substituted $C_1 - C_4$ alkyl, optionally substituted $C_1 - C_4$ haloalkyl and optionally substituted $C_1 - C_4$ heteroalkyl.

7. (Previously presented) A compound according to claim 6, wherein R^2 is selected from the group consisting of hydrogen, optionally substituted $C_1 - C_2$ alkyl, optionally substituted $C_1 - C_2$ haloalkyl and optionally substituted $C_1 - C_2$ heteroalkyl.

8. (Original) A compound according to claim 7, wherein R^2 is CF_3 .

9. (Currently amended) A compound according to claim 1, wherein R^3 is selected from the group consisting of hydrogen, optionally substituted $C_1 - C_6$ alkyl, optionally substituted $C_1 - C_6$ haloalkyl, optionally substituted $C_1 - C_6$ heteroalkyl, $C(Y)OR^{11}$ and $C(Y)NR^{10}R^{11}$; or

~~R^3 and R^6 taken together form a three to eight membered saturated or unsaturated carbocyclic ring.~~

Claim 10. (Cancelled)

11. (Previously presented) A compound according to claim 9, wherein R^3 is selected from the group consisting of hydrogen, optionally substituted $C_1 - C_4$ alkyl, optionally substituted $C_1 - C_4$ haloalkyl and optionally substituted $C_1 - C_4$ heteroalkyl.

12. (Previously presented) A compound according to claim 1, wherein R^6 is selected from the group consisting of hydrogen, CF_3 , CF_2Cl , CF_2H , CFH_2 , optionally substituted $C_1 -$

C₆ alkyl, optionally substituted C₁ – C₆ haloalkyl, optionally substituted C₁ – C₆ heteroalkyl, optionally substituted aryl, optionally substituted arylalkyl, optionally substituted heteroaryl, optionally substituted C₂ – C₆ alkynyl and optionally substituted C₂ – C₆ alkenyl.

13. (Previously presented) A compound according to claim 12, wherein R⁶ is selected from the group consisting of hydrogen, CF₃, CF₂Cl, CF₂H, CFH₂, optionally substituted C₁ – C₄ alkyl, optionally substituted C₁ – C₄ haloalkyl, optionally substituted C₁ – C₄ heteroalkyl, optionally substituted C₂ – C₄ alkynyl and optionally substituted C₂ – C₄ alkenyl.

14. (Previously presented) A compound according to claim 13, wherein R⁶ is selected from the group consisting of hydrogen, CF₃, CF₂Cl, CF₂H, CFH₂, optionally substituted C₁ – C₄ alkyl, optionally substituted C₁ – C₄ haloalkyl and optionally substituted C₁ – C₄ heteroalkyl.

15. (Previously presented) A compound according to claim 12, wherein R⁶ is selected from the group consisting of optionally substituted aryl, optionally substituted arylalkyl and optionally substituted heteroaryl.

16. (Previously presented) A compound according to claim 1, wherein R⁵ is selected from the group consisting of hydrogen, CF₃, CF₂Cl, CF₂H, CFH₂, optionally substituted C₁ – C₆ alkyl, optionally substituted C₁ – C₆ haloalkyl, optionally substituted C₁ – C₆ heteroalkyl, optionally substituted C₂ – C₆ alkynyl, optionally substituted C₂ – C₆ alkenyl.

17. (Previously presented) A compound according to claim 16, wherein R⁵ is selected from the group consisting of hydrogen, CF₃, CF₂Cl, CF₂H, CFH₂, optionally substituted C₁ – C₆ alkyl, optionally substituted C₁ – C₆ haloalkyl and optionally substituted C₁ – C₆ heteroalkyl.

18. (Previously presented) A compound according to claim 17, wherein R⁵ is selected from the group consisting of hydrogen, CF₃, CF₂Cl, CF₂H, CFH₂, optionally substituted C₁ – C₄ alkyl, optionally substituted C₁ – C₄ haloalkyl and optionally substituted C₁ – C₄ heteroalkyl.

19. (Original) A compound according to claim 18, wherein R⁵ is hydrogen or CF₃.

20. (Previously presented) A compound according to claim 1, wherein R^7 is selected from the group consisting of hydrogen, F, Cl, optionally substituted $C_1 - C_4$ alkyl, optionally substituted $C_1 - C_4$ haloalkyl and optionally substituted $C_1 - C_4$ heteroalkyl.

21. (Previously presented) A compound according to claim 1, wherein R^8 is selected from the group consisting of hydrogen, F, Cl, optionally substituted $C_1 - C_4$ alkyl, optionally substituted $C_1 - C_4$ haloalkyl and optionally substituted $C_1 - C_4$ heteroalkyl.

22. (Original) A compound according to claim 21, wherein R^7 and R^8 are each hydrogen or optionally substituted $C_1 - C_2$ alkyl.

23. (Previously presented) A compound according to claim 1, wherein R^9 is selected from the group consisting of hydrogen, optionally substituted $C_1 - C_6$ alkyl, optionally substituted $C_1 - C_6$ haloalkyl and optionally substituted $C_1 - C_6$ heteroalkyl.

24. (Previously presented) A compound according to claim 23, wherein R^9 is selected from the group consisting of hydrogen and optionally substituted $C_1 - C_4$ alkyl.

25. (Previously presented) A compound according to claim 1, wherein R^{10} is selected from the group consisting of hydrogen, $S(O)R^{12}$, SO_2R^{12} , $C(O)R^{12}$, CO_2R^{12} , optionally substituted $C_1 - C_6$ alkyl, optionally substituted $C_1 - C_6$ haloalkyl and optionally substituted $C_1 - C_6$ heteroalkyl.

26. (Previously presented) A compound according to claim 25, wherein R^{10} is selected from the group consisting of hydrogen, $S(O)R^{12}$, SO_2R^{12} , $C(O)R^{12}$ and CO_2R^{12} .

27. (Previously presented) A compound according to claim 1, wherein R^4 is selected from the group consisting of hydrogen, optionally substituted $C_1 - C_4$ alkyl, optionally substituted $C_1 - C_4$ haloalkyl and optionally substituted $C_1 - C_4$ heteroalkyl.

28. (Previously presented) A compound according to claim 27, wherein R^4 is selected from the group consisting of hydrogen and optionally substituted $C_1 - C_2$ alkyl.

29. (Currently amended) A compound according to claim 1, wherein R^{13} is selected from the group consisting of CF_3 , CF_2Cl , CF_2H , CFH_2 , CH_2CF_3 , CH_2CF_2Cl , CH_2CCl_2F , optionally substituted $C_1 - C_6$ alkyl, optionally substituted $C_3 - C_6$ cycloalkyl, optionally substituted $C_1 - C_6$ haloalkyl, optionally substituted $C_1 - C_6$ heteroalkyl, optionally substituted $C_2 - C_6$ alkenyl, optionally substituted $C_2 - C_6$ alkynyl, optionally substituted aryl,

optionally substituted heteroaryl, optionally substituted arylalkyl and optionally substituted heteroarylalkyl; or

~~R⁶ and R¹³ taken together form a five to seven membered saturated or unsaturated heterocyclic ring.~~

30. (Currently amended) A compound according to claim 29, wherein R¹³ is selected from the group consisting of CF₃, CF₂Cl, CF₂H, CFH₂, CH₂CF₃, CH₂CF₂Cl, CH₂CCl₂F, optionally substituted C₁ - C₄ alkyl, optionally substituted C₁ - C₄ haloalkyl, optionally substituted C₁ - C₄ heteroalkyl, optionally substituted C₂ - C₄ alkenyl and optionally substituted aryl; or

~~R⁶ and R¹³ taken together form a five to six membered saturated or unsaturated heterocyclic ring.~~

31. (Currently amended) A compound according to claim 30, wherein R¹³ is selected from the group consisting of CF₃, CF₂Cl, CF₂H, CFH₂, CH₂CF₃, CH₂CF₂Cl, CH₂CCl₂F, methyl, ethyl, propyl, isopropyl, isobutyl, cyclopropylmethyl, allyl; or

~~R⁶ and R¹³ taken together form a five membered saturated or unsaturated heterocyclic ring.~~

Claims 32 - 36 (Cancelled).

37. (Original) A compound according to claim 1, wherein m is 0 or 1.

38. (Original) A compound according to claim 37, wherein m is 1.

39. (Currently amended) A compound according to claim 1, wherein W is selected from the group consisting of NH, N{R¹³} and N{C(Y)R¹¹}, ~~N{C(Y)R¹¹}~~ and ~~N{SO₂R¹¹}~~.

40. (Original) A compound according to claim 39, wherein W is NH or N{R¹³}.

Claims 41 and 42 (Cancelled).

Claims 43 and 44 (Cancelled).

Claim 45. (Cancelled).

46. (Original) A compound according to claim 45, wherein Z is NH or N{R¹¹}.

Claims 47 and 48 (Cancelled).

49. (Currently amended) A compound according to claim 1, wherein:

R^1 is selected from the group consisting of hydrogen, F, Cl, OR^9 , $S(O)_nR^9$, $NR^{10}R^{11}$, optionally substituted $C_1 - C_4$ alkyl, optionally substituted $C_1 - C_4$ haloalkyl and optionally substituted $C_1 - C_4$ heteroalkyl;

R^2 is selected from the group consisting of hydrogen, F, Cl, Br, I, CF_3 , CF_2Cl , CF_2H , CFH_2 , CF_2OR^9 , CH_2OR^9 , OR^9 , $S(O)_nR^9$, optionally substituted $C_1 - C_6$ alkyl, optionally substituted $C_1 - C_6$ haloalkyl, optionally substituted $C_1 - C_6$ heteroalkyl, optionally substituted $C_2 - C_6$ alkynyl and optionally substituted $C_2 - C_6$ alkenyl;

R^3 is selected from the group consisting of hydrogen, optionally substituted $C_1 - C_6$ alkyl, optionally substituted $C_1 - C_6$ haloalkyl, optionally substituted $C_1 - C_6$ heteroalkyl, $C(Y)OR^{11}$ and $C(Y)NR^{10}R^{11}$; or

~~R^3 and R^6 taken together form a three to eight membered saturated or unsaturated carbocyclic ring;~~

R^5 is selected from the group consisting of hydrogen, CF_3 , CF_2Cl , CF_2H , CFH_2 , optionally substituted $C_1 - C_6$ alkyl, optionally substituted $C_1 - C_6$ haloalkyl, optionally substituted $C_1 - C_6$ heteroalkyl, optionally substituted $C_2 - C_6$ alkynyl and optionally substituted $C_2 - C_6$ alkenyl; and

Claims 1-9, 11-31, 37-40, 46, 49-51, 56-72, 75-77 and 108 are pending. Claims 10, 41, 42 and 45 are cancelled herein without prejudice or disclaimer. Applicant reserves the right to file a continuation application directed to cancelled subject matter. Claims 1, 9, 29-31, 49-51, 58, 63, 71, 72, 76 and 77 are amended herein to more distinctly claim the subject matter. Claims 1 and 58 are amended to define the substituents of the optionally substituted groups. Basis for the amendment is found throughout the specification (e.g., see page 11, line 26 through page 12, line 9). Claims 1 and 58 also are amended to separate the substituents for variables X and Z. Claims 1, 9, 29-31, 49, 50, 58, 63, 71 and 72 are amended to cancel subject matter directed to substituents that when taken together form a carbocyclic or heterocyclic ring. Applicant reserves the right to file a continuation application directed to cancelled subject matter. Claims 51 and 76 are amended to more distinctly claim the substituents for X and Z. Basis for new claim 108 is found throughout the specification (for example, see pages 3-7 and original claim 1). No new matter is added.

THE REJECTION OF CLAIMS 1-31, 37-42, 45, 46, 49-51, 58-72 AND 75-77 UNDER 35 U.S.C. § 112, FIRST PARAGRAPH – Scope of Enablement

Claims 1-31, 37-42, 45, 46, 49-51, 58-72 and 75-77 are rejected under 35 U.S.C. § 112, first paragraph as allegedly containing subject matter not described in the specification in such a way as to enable one of skill in the art to make and/or use the claimed subject matter. The Examiner states that the compound and pharmaceutical composition claims are only enabled in part because the instant claims include terms that allegedly are incompletely defined. The Examiner also alleges that it would require undue experimentation to practice the full scope of the claims. The Examiner alleges that "the scope is excessive in view of the disclosed exemplifications." Applicant respectfully traverses the rejection.

RELEVANT LAW

The test of enablement is whether one skilled in the art can make and use what is claimed based upon the disclosure in the application and information known to those of skill in the art without undue experimentation. *United States v. Telectronics, Inc.*, 8 USPQ2d

1217 (Fed. Cir. 1988). A certain amount of experimentation is permissible as long as it is not undue. A patent application need not teach, and preferably omits, what is well known in the art. *Spectra-Physics, Inc. v. Coherent, Inc.*, 3 USPQ2d 1737 (Fed. Cir. 1987). Indeed, "not everything necessary to practice the invention need be disclosed. In fact, what is well-known is best omitted." *In re Buchner*, 929 F.2d 660, 661, 18 U.S.P.Q.2d 1331, 1332. Showing every combination of substituents is unnecessary.

A considerable amount of experimentation is permissible, particularly if it is routine experimentation. The amount of experimentation that is permissible depends upon a number of factors, which include: the quantity of experimentation necessary, the amount of direction or guidance presented, the presence or absence of working examples, the nature of the invention, the state of the prior art, the relative skill of those in the art, the predictability of the art, and the breadth of the claims. *See, Ex parte Forman*, 230 USPQ 546 (Bd. Pat. App. & Int'f 1986); see also *In re Wands*, 8 USPQ2d 1400 (Fed. Cir. 1988).

THE CLAIMS

Claim 1 is directed to a compound having the formula:

(I)

where the substituents are as recited in the claims. Claims 2-9, 11-31, 37-40, 46 and 49-51 ultimately depend from claim 1 and are directed to various embodiments thereof.

Claim 58 is directed to a pharmaceutical composition that includes a pharmaceutically acceptable carrier and a compound of formula:

(I)

where the substituents are as recited in the claims. Claims 59-72, 75 and 76 ultimately depend from claim 58 and are directed to various embodiments thereof.

ANALYSIS

Applicant respectfully submits that the Examiner rejects claims 1-31, 37-42, 45, 46, 49-51, 58-72 and 75-77 under 35 U.S.C. § 112, first paragraph on page 2 and on page 3 of the Office Action. Both rejections state that the claims are rejected because it is alleged that practicing the full scope of the claims requires undue experimentation. Applicant respectfully requests that the Examiner clarify the difference between the rejection on page 2 and the rejection on page 3 of the Office Action so that Applicant can address the rejections with particularity. In order to be fully responsive, Applicant provides the following traverse.

The *In re Wands* factors

Applying the *In re Wands* factors to the instant facts reveals that the amount of experimentation is not undue. The analysis and arguments set forth in the previous responses of record are incorporated by reference herein.

a. The scope of the claims.

The pending claims recite compounds of Formula I and compositions thereof. The Examiner alleges that:

The repeated use of the term "may be optionally substituted" without specifying the substituents implied thereby renders the breadth of the claim excessive because said term implies that the unnamed substituents is/are open to all possible alternatives.

First, the pending claims do not include the recitation "may be optionally substituted." The pending claims include the recitation "optionally substituted." Further, as discussed above, claims must be read in view of the specification. See *e.g.*, MPEP § 2106 ("An applicant is entitled to be his or her own lexicographer, and in many instances will provide an explicit definition for certain terms used in the claims. Where an explicit definition is provided by the applicant for a term, that definition will control interpretation of the term as it is used in the claim."); MPEP § 608.01(o) ("The meaning of every term used in any of the claims should be apparent from the descriptive portion of the specification"); MPEP § 2173.05 ("When the specification states the meaning that a term in the claims is intended to have, the claim is examined using that meaning in order to achieve a complete exploration of the applicant's invention and its relation to the prior art."). The term "optionally substituted" is expressly defined in the specification. Thus, the recitation "optionally substituted" does not imply "that the unnamed substituents is/are open to all possible alternatives" as alleged by the Examiner. Thus, reciting that definition in the claims is not necessary. Without acquiescing to the Examiner's allegation and solely to expedite issuance of the application, independent claims 1

and 58 are amended herein to recite the substituents encompassed by the recitation "optionally substituted" in the claims.

b. Nature of the Invention

The specification provides a general description of non-steroidal compounds that are high-affinity, high-specificity agonists, partial agonists (*i.e.*, partial activators and/or tissue-specific activators) and antagonists for androgen receptors (AR). The claimed subject matter is directed to androgen receptor modulator compounds and pharmaceutical compositions containing such compounds.

The Examiner states that the nature of the invention "includes a method of testing, a method of purification and a vast number of medicinal treatment[s] wherein compounds of instant claim 1 are administered to a host in need of such treatment." Applicant respectfully submits that the pending claims are directed to compounds as recited in the claims and to pharmaceutical compositions thereof. There currently are no method claims pending.

c. State of the Prior Art

Applicant respectfully submits that, at the time of the priority application, the mechanism of action of the intracellular receptors and the effects of small molecule agonists, antagonist or partial agonists on IR-mediated transcription modulation was well known to the skilled artisan (for example, see Rosen *et al.* (*J. Med. Chem.*, 1995, vol. 38, No. 25, pp 4855-4874, a copy of which is provided herein). Androgen receptor agonist compounds and their use as therapeutic agents also was known to those skilled in the medical arts. For example, Rosen *et al.* provides an overview of diseases and conditions that share mediation by androgen receptors as an underlying etiology. For example, Rosen *et al.* recites on page 4862:

"Androgens are synthesized in the testes, adrenal cortex, and ovaries. The net effect of endogenous androgens reflects the combined actions of the secreted hormone, testosterone; its 5 α -reduced metabolite, dihydrotestosterone; and its estrogenic derivative, estradiol. Androgens serve different functions at different stages of male development and have clear therapeutic uses in the treatment of hypogonadism, growth retardation, breast carcinoma, and osteoporosis. The actions of androgens are mediated through AR."

Applicant also submits that at the time of the priority application, androgen receptor agonist compounds were either in clinical trials or were available to the public for the treatment of hypogonadism, metastatic breast cancer, anemias, as anabolic agents and for the treatment of other diseases or conditions. For example, Testoderm®, a testosterone transdermal patch, was approved in the U.S. in 1993 for hormone replacement therapy in hypogonadal men. Androderm®, also a transdermal testosterone patch, was approved in the

U.S. in 1995 for the treatment of hypogonadism. Testred®, which contains the AR agonist methyltestosterone, was approved in the U.S. in 1973 for hormone replacement therapy in hypogonadal men as well as for the treatment of metastatic breast cancer in women. Anadrol®-50, which contains the AR agonist oxymetholone, was approved in the U.S. in 1972 and is used in the treatment of anemias caused by deficient red cell production. It also is well known that testosterone, the native androgen and AR agonist, is an anabolic agent. Therefore, it was well known in the prior art at the time of filing the original application that androgen receptor agonist compounds and compositions that include AR agonist compounds are useful in male hormone replacement therapy, in stimulation of hematopoiesis, as anabolic agents, and in the treatment of wasting diseases, hypogonadism and breast cancer.

Applicant also respectfully submits that, at the time of filing the priority application, the use of androgen receptor antagonists as therapeutic agents was known to those skilled in the medical arts. For example, Singh *et al.*, teaches that androgen receptor antagonists are useful for treating prostate cancer, acne, seborrhea, hirsutism and androgenic alopecia (Singh *et al.*, Current Medicinal Chemistry 7: 211-247 (2000)). Rosen *et al.* (*J. Med. Chem.*, 1995, vol. 38, No. 25, pp 4855-4874) also provides an overview of diseases and conditions that share an etiology of being mediated by androgen receptor antagonists. For example, Rosen *et al.* recites on page 4862:

“Compounds that block the action or synthesis of androgens have proven useful in treatment of diseases such as prostate cancer, prostatic hypertrophy, hirsutism, male pattern baldness, and acne. Among the most potent orally active anti-androgens is cyproterone acetate. This compound possesses progestational activity and suppresses the secretion of gonadotrophins, both of which are unwanted side effects. Other anti-androgens include flutamide, a prodrug for the active metabolite, 2-hydroxyflutamide, casodex, and an analogue of nilutamide.”

Applicant also submits that at the time of filing the instant application, several androgen receptor antagonist compounds were either in clinical trials or were available to the public for the treatment of the diseases or conditions listed above. For example, Eulexin®, which contains the androgen receptor antagonist flutamide, was approved in the U.S. in 1989 for the treatment of prostate cancer. Casodex® (bicalutamide), an androgen receptor antagonist, was approved in 1995 for the treatment of prostate cancer. The AR antagonist cyproterone acetate was approved for use in Europe as early as 1978 for the treatment of female acne and hirsutism (Gruber *et al.*, Arch Dermatol 134: 459-463 (1998), Venturoli *et al.*, J Clin Endocrinology & Metabolism 84(4): 1304-1310 (1999)).

In addition, a number of methods and assays for identifying agonists, partial agonists or antagonists of the steroid receptors was known at the time of filing the original application. For example, Berger *et al.* teaches a co-transfection assay (Berger *et al.*, J. Steroid Biochem. Molec. Biol. 41: 773 (1992)). Berger *et al.* teaches that activity in the co-transfection assay correlates very well with known *in vivo* activity, such that the co-transfection assay functions as a qualitative and quantitative predictor of a tested compounds *in vivo* pharmacology.

Thus, at the time of filing of the instant application, a broad body of knowledge had amassed in the areas of pharmaceutical sciences, medicine, and biochemistry directed to compounds that agonize or antagonize the steroid receptors, including androgen receptors, and to the use of compounds that agonize or antagonize the steroid receptors, such as androgen receptors, for treatment of diseases and conditions.

d. Level of Skill in the Art

As the Examiner noted, the skill in the art of chemical synthesis is high. That skill, together with the instant specification, including cited and incorporated references, allow the skilled artisan to make any and all of the claimed compounds. The Examiner states that "the level of skill in the medicinal arts is moderate because it is unclear which if any of the compounds disclosed herein are active against one or more specific disease conditions." Applicants respectfully disagree. The level of skill in the medical arts is independent of the issues. The skill of the medical practitioner does not vary.

Applicant respectfully submits that the level of skill in the medical arts is high. This is evidenced by the art in this area, which is authored primarily by those with Ph.D. and M.D. degrees and is intended for an audience of similarly highly skilled individuals, primarily in the fields of biochemical, pharmaceutical, or medical arts. The numerous articles and patents made of record in this application, authored and reviewed by those known in the art, address a highly skilled audience, and further evidence the high level of skill in this art. Therefore, the amount of disclosure required to meet the enablement requirement is minimal.

With respect to the rejection, it is respectfully submitted that no evidence is provided to support the Examiner's position that "the level of skill in the medicinal arts is moderate because it is unclear which if any of the compounds disclosed herein are active against one or more specific disease conditions." The Examiner is reminded that MPEP 2144.03 states:

The Examiner may take official notice of facts outside of the record which are capable of instant and unquestionable demonstration as being "well-known" in the art. *In re Ahlert*, 424 F.2d 1088, 1091, 165 USPQ 418, 420 (CCPA 1970). . . .

The facts of which the Examiner is taking notice are conclusory and are not capable of instant and unquestionable demonstration as being "well-known" in the art. MPEP 2144.03 continues:

If justified, the examiner should not be obliged to spend time to produce documentary proof. If the knowledge is of such notorious character that official notice can be taken, it is sufficient so to state. *In re Malcolm*, 129 F.2d 529, 54 USPQ 235 (CCPA 1942). If the applicant traverses such an assertion the examiner should cite a reference in support of his or her position.

If this position is maintained, the Examiner must provide a reference supporting this position.

e. Predictability of the Art

The Examiner alleges that the level of predictability in the art is indeterminate because it allegedly is not clear which compounds are active as androgen receptor agonists or antagonists. Applicant respectfully disagrees.

The instant application provides detailed teachings of *in vitro* and *in vivo* assays that allow one of skill in the art to test the compounds as instantly claimed for androgen receptor activity. The instant application, for example pages 110-114, provides a highly detailed teaching of *in vitro* assays, such as the "cis-trans" or "co-transfection" assay. Table 1 on page 115 of the specification provides *in vitro* binding data of exemplary compounds disclosed in the instant application that exhibit androgen receptor agonist activity, partial agonist activity, or antagonist activity. These assays are known in the art (see Evans *et al.*, Science 240: 889-95 (1988) and correlate well with *in vivo* activity and can function as a qualitative and quantitative predictor of a tested compounds *in vivo* pharmacology (Berger *et al.*, J. Steroid Biochem. Molec. Biol. 41: 773 (1992)). The data indicates that all of the exemplary compounds possess androgen receptor agonist, partial agonist or antagonist activity.

The compounds of the instant application are further characterized for their specificity for the androgen receptor by examining the *in vitro* binding activity with other members of the steroid receptors. Table 2 on page 116 provides binding data for exemplary compounds disclosed in the instant application with the androgen, progesterone, estrogen, glucocorticoid and mineralcorticoid receptors. As noted above, the androgen receptor agonist activity or antagonist activity shown in the *in vitro* assays correlates very well with *in vivo* activity. Once the androgen receptor activity of the compounds have been established, the application of those compounds to the treatment of any diseases responsive to androgen receptor agonists or antagonists, as discussed above, is well within the routine skills of those skilled in the art through reference to the present specification as well as the general and specialized knowledge of those working in this recognized field. Further, formulating such compounds into a

pharmaceutical composition and administration of such compositions to a subject is well known in the medical arts.

f. The amount of direction or guidance presented and the presence of working examples

The Examiner admits that the specification discloses 150 exemplary compounds that are precursors, intermediates or final products of the claimed compounds. The specification also teaches seven generic synthesis schemes (for example, see page 33, 35, 37, 38, 39, 41 and 42). The application names over 150 exemplary AR modulator compounds (for example, see page 29 through 32 and claims 56 and 57). The specification also provides over 50 working examples and two screening assays. It is respectfully submitted that the direction provided by the specification is sufficient to allow one of skill in the art to synthesize, test and administer any and all compounds of the claimed subject matter. Modification of the reaction conditions or choice of starting materials is routine and within the scope of the teachings in the application and knowledge of one of skill in the art.

For example, Scheme 1 outlines the synthesis of 5-hydroxy-6-bromo-quinoline compounds 6 starting from a phenylenediamine derivative, for example, 5-chloro-1,3-phenylenediamine. Other phenylenediamine derivatives also can be used in the synthetic sequence outlined in Scheme I. For example, use of 5-chloro-1,4-phenylenediamine as the starting material in Scheme I results in the synthesis of 6-hydroxy-5-bromo-quinoline compounds.

Schemes III and V outline the synthesis of 7-nitro-1,4-benzoxazine compounds, which begin with the chemo- and regioselective N-alkylation of an amino alcohol onto a 3,4-dihalonitrobenzene, such as, for example, 3,4-difluoronitrobenzene. One of skill in the art would recognize that selective protection of the nitrogen atom of the aminoalcohol 13, with, for example, di-tert-butyl dicarbonate, prior to reaction with 3,4-difluoronitrobenzene would result in the reaction of the alcohol moiety of the aminoalcohol at the 4-position of 3,4-difluoronitrobenzene. Removal of the protecting group on the nitrogen, with, for example, acid, followed by treatment with base would provide 6-nitro-1,4-benzoxazine compounds, which are regioisomers of structures 15 and 24.

Scheme VI outlines a racemic route to 7-nitro-1,4-benzoxazine compounds 24 that begins with the N-alkylation of a 2-amino-5-nitrophenol by treatment with an aldehyde, its corresponding hydrate or hemiacetal, in the presence of a reducing agent, for example, sodium cyanoborohydride. However, use of a 2-amino-4-nitrophenol derivative as the starting material, instead of 2-amino-5-nitrophenol as depicted in Scheme VI, would provide 6-nitro-

1,4-benzoxazine compounds. 6-Nitro-1,4-benzoxazine compounds are regioisomers of compounds of structure 24. One of skill in the art can readily follow these schemes or known variations of such schemes with any of a vast number of commonly available starting materials to arrive at the claimed subject matter. The art of chemical synthesis is predictable and is dictated by recognized chemical reactions and constraints. There is nothing of record to suggest that production or use of any of the claimed compounds or compositions would require development of new procedures or excessive experimentation. Organic synthesis methods have been used for decades. Hence, any experimentation would be routine to the skilled artisan. Therefore, in view of the teachings of the specification, in combination with what was known at the time the priority application was filed, Applicant respectfully submits that the claimed compounds can be prepared predictably using the methods disclosed in the specification or that are known to those skilled in this art.

Similarly, one of skill in the art can assess the activity of any of the claimed compounds using the binding assay or the co-transfection assay, both of which are disclosed in the specification, though one of skill in the art can assess compounds using other known assays. Various screening assays for assessing the ability of a compound or composition to modulate the transcriptional ability of intracellular receptors are known to those of skill in the art, such as those described in U.S. Pat. Nos. 4,981,784, 5,071,773, 5,298,429, and 5,506,102 and in WO89/05355, WO91/06677, WO92/05447, WO93/11235, WO93/23431, WO94/23068, WO95/18380 and CA 2,034,220. Further, formulating such compounds into a pharmaceutical composition and administration of such compositions to a subject is well known in the medical arts. Thus, preparation and administration of pharmaceutical compounds also is predictable. Finally, administration of compounds is routine to one of skill in the medical arts. Thus, it is respectfully submitted that the direction provided by the specification is sufficient to allow one of skill in the art to synthesize, test and administer any and all compounds of the claimed subject matter. Therefore, Applicant respectfully submits that one skilled in the art can make and use what is claimed based upon the disclosure in the application and information known to those of skill in the art without undue experimentation.

g. The amount of experimentation required

There is nothing of record to suggest that production or use of any of the claimed compounds or compositions would require development of new procedures or excessive experimentation. Organic synthesis methods have been used for decades. As discussed above, bioassays for evaluating whether compounds are functional ligands for receptor

proteins were known in the art since at least 1991. Such assays are routine in this art and do not require excessive experimentation. Applicant notes that "a considerable amount of experimentation is permissible, if it is merely routine . . ." *In re Wands* 858 F.3d 731, 737 (Fed Cir. 1988).

CONCLUSION

In light of the scope of the claims, the nature of the claimed subject matter, the state of the prior art, the high level of skill of those in this art, the predictability of the art, the amount of direction and guidance presented in the specification, the presence of over 50 working examples, the low amount of experimentation required and the fact that any required experimentation is routine, Applicant respectfully submits that it would not require undue experimentation for a person skilled in the art to make and use the claimed compounds and compositions. Therefore, the specification is enabling for making and using the full scope of the claimed subject matter. Applicant respectfully requests that the rejection be reconsidered and withdrawn.

REBUTTAL TO THE EXAMINER'S ARGUMENTS

1. "Disclosed Exemplifications"

The Examiner alleges that the scope is excessive in view of the "disclosed exemplifications." Applicant respectfully disagrees. The specification discloses androgen receptor modulator compounds, pharmaceutical compositions containing such compounds as well as methods of using such compounds and pharmaceutical compositions for modulating processes mediated by steroid receptors. The application discloses methods of making such compounds and pharmaceutical compositions, as well as intermediates used in their synthesis. The specification describes seven generic synthesis schemes (for example, see page 33, 35, 37, 38, 39, 41 and 42). One of skill in the art can readily follow these schemes or known variations of such schemes with any of a vast number of commonly available starting materials to arrive at the claimed subject matter. The application names over 150 exemplary AR modulator compounds (for example, see page 29 through 32 and claims 56 and 57. The specification also provides over 50 working examples. The application teaches *in vitro* assays, such as the "cis-trans" or "co-transfection" assay, for characterizing exemplary AR modulator compounds. The specification provides *in vitro* binding data of exemplary compounds disclosed in the instant application that exhibit androgen receptor agonist activity, partial agonist activity, or antagonist activity. The compounds of the instant application are further characterized for their specificity for the androgen receptor by examining the *in vitro* binding activity with other members of the

steroid receptors. Hence the specification provides a variety of examples of compounds that fall within the scope of the claims evidencing that the claimed compounds function as claimed. The requirements of 35 U.S.C. §112, first paragraph, do not require a specific example of everything within the scope of the claims. *In re Anderson*, 176 USPQ 331, 333 (CCPA 1973) :

...we do not regard section 112, first paragraph, as requiring a specific example of everything within the scope of a broad claim . . . What the Patent Office is here apparently attempting is to limit all claims to the specific examples, not withstanding the disclosure of a broader invention. This it may not do.

In re Grimme, Keil and Schmitz, 124 USPQ 449, 502 (CCPA 1960) :

It is manifestly impracticable for an applicant who discloses a generic invention to give an example of every species falling within it, or even to name every such species. It is sufficient if the disclosure teaches those skilled in the art what the invention is and how to practice it.

Hence there is no requirement for the applicant to exemplify or even provide an example of everything within the scope of the claims. The Patent Office cannot "limit all claims to the specific examples, notwithstanding the disclosure of a broader invention." A patentee's invention may be broader than the particular embodiment shown in the specification. A patentee not only is entitled to narrow claims particularly directed to the preferred embodiment, but also to broad claims that define the invention without a reference to specific instrumentalities. *Smith v. Snow*, 294 U.S. 1, 11, 24 USPQ 26, 30 (1935). Applicant is entitled to claims that are commensurate in scope not only with what applicant has specifically exemplified, but commensurate in scope with that which one of skill in the art could obtain by virtue of that which the applicant has disclosed.

2. "Defined by the Prior Art"

In the present Action, the Examiner alleges that "the state of the prior art is defined by the prior art presently cited by the Applicant and by Examiner and particularly by PTO-892 references F and G wherein anticipatory compounds and compositions have been disclosed." Applicant respectfully disagrees. The prior art is replete with references that show that the skilled artisan can use known organic synthesis schemes and reactions to produce various bicyclic, tricyclic and polycyclic organic compounds, including, for example, quinolines, quinolinones, coumarins, benzoxazines, oxazolidines, azasteroids, progesterones, azachlor-madinones, anthrasteroids, flutamides and phthalimides, and that the art of record teaches bioassays for evaluating whether compounds are functional ligands for receptor proteins and correlates the activity of ligands in such assays to *in vivo* activity (e.g., see Evans *et al.* (US Pat. Nos. 4,981,784 and 5,071,773 and Science 240:889-95 (1988))).

Applicant disagrees that "the state of the prior art is defined by the prior art presently cited by applicant and by examiner." Applicant is not aware of such a definition and respectfully requests that the Examiner cite authority.

3. Alleged Anticipatory Prior Art

In the present Action, the Examiner alleges that certain references are anticipatory prior art (Action at page 4, which states that PTO-892 references F and G disclose anticipatory compounds and compositions). Reference F is US 6,030,967 (2/29/00) to Mauri *et al.* and Reference G is US 6,340,704 (1/22/02) to Mauri *et al.* Applicant respectfully submits that the Examiner has not rejected any of the claims under 35 U.S.C. § 102(b) as anticipated by either US Pat. Nos. 6,030,967 or 6,340,704. Applicant respectfully submits that neither US Pat. No. 6,030,967 nor US Pat. No. 6,340,704 discloses compounds as instantly claimed nor compositions thereof.

For example, US Pat. No. 6,030,967 discloses compounds having the formula:

where Q is an optionally substituted carbon atom or N(O)_p wherein p is 0 or 1; Y is an optionally substituted methylene group, S(O)_q wherein q is an integer of 0 to 2, or an optionally substituted imino group; Z¹ is a C₁₋₃ alkylene group which can have an oxo group or a thioxo group and can contain etherified oxygen or sulfur within the carbon chain; Z² is an optionally substituted C₁₋₃ alkylene group; Ar is an optionally substituted carbocyclic group or an optionally substituted heterocyclic group; one of R¹ and R² is a hydrogen atom, a halogen atom, a hydroxyl group, an optionally substituted lower alkyl group, or an optionally substituted lower alkoxy group; the other is a halogen atom, a hydroxyl group, an optionally substituted lower alkyl group, or an optionally substituted lower alkoxy group; or R^{sup.1} and R^{sup.2} taken together with adjacent —C=C— form a ring; and ring A is a benzene ring which may be substituted in addition to R¹ and R²; or a salt thereof.

US Pat. No. 6,340,704 discloses compounds having the formula:

where R^1 is an amino group that may be substituted, R^2 is a hydrogen atom or a lower alkyl group that may be substituted; X is a methane group that may be substituted or $N(O)_m$ (m is 0 or 1); ring A is a homo- or hetero-cycle that is substituted by a halogen atom, lower alkyl, lower alkoxy or lower alkylendioxy group, and ring B is a homo- or hetero-cycle that may be substituted.

Neither US Pat. No. 6,030,967 nor US Pat. No. 6,340,704 discloses compounds or compositions as instantly claimed, such as those that have the structure set forth as formula I

and defined in the instant claims. Applicant also respectfully submits that the Office Action is internally inconsistent. At Paragraph C on Page 4 of the Action the Examiner alleges that PTO-892 References F and G disclose anticipatory compounds and compositions, while in Paragraph D on Page 4 of the Action, the Examiner states that these references disclose "many compounds very closely analogous to the instant claimed compounds." Further, on page 6 of the Action, the Examiner states that "claims 1-31, 37-42, 45, 46, 49-51, 58-72 and 75-77 would be allowable if rewritten or amended to overcome the rejection under 35 U.S.C. 112" (see last sentence on page 6). Thus, it appears that the Examiner is mistaken when he states on page 4 of the Action that US Pat. No. 6,030,967 and US Pat. No. 6,340,704 disclose anticipatory compounds and compositions. In order to clarify the record of the instant prosecution history, Applicant respectfully requests that the Examiner withdraw the statement that US Pat. No. 6,030,967 and US Pat. No. 6,340,704 disclose anticipatory compounds and compositions.

4. The instant claims include terms that allegedly are incompletely defined

The Examiner alleges that the compounds and pharmaceutical composition claims are enabled only in part because the instant claims include terms that allegedly are incompletely defined. The prior Office Action raised this issue under 35 U.S.C. § 112, second paragraph, and it has not been maintained in the instant Action. Thus, it appears that the rejection under 35 U.S.C. § 112, second paragraph has been withdrawn. Notwithstanding this, in order to be fully responsive, Applicant respectfully traverses the rejection.

a. aryl

The Examiner alleges that the term "aryl" is incompletely defined because "said terms typically i) lack any upper bounds as to size." Applicant respectfully disagrees.

It is respectfully submitted that the specification specifically defines the term "aryl." For example, page 9, line 26 through page 10, line 5, recites:

The term "aryl," alone or in combination, refers to an optionally substituted aromatic ring system. The term aryl includes monocyclic aromatic rings, polyaromatic rings and polycyclic aromatic ring systems containing from six to about twenty carbon atoms. The term aryl also includes monocyclic aromatic rings, polyaromatic rings and polycyclic ring systems containing from 6 to about 12 carbon atoms, as well as those containing from 6 to about 10 carbon atoms. The polyaromatic and polycyclic aromatic ring systems may contain from two to four rings. Examples of aryl groups include, without limitation, phenyl, biphenyl, naphthyl and anthryl ring systems.

This definition includes upper bounds as to size. Applicant respectfully submits that claims must be read in view of the specification. See, *e.g.*, MPEP § 2106 ("An applicant is entitled to be his or her own lexicographer, and in many instances will provide an explicit definition for certain terms used in the claims. Where an explicit definition is provided by the applicant for a term, that definition will control interpretation of the term as it is used in the claim."); MPEP § 2173.05 ("When the specification states the meaning that a term in the claims is intended to have, the claim is examined using that meaning in order to achieve a complete exploration of the applicant's invention and its relation to the prior art."). The term "aryl" is expressly defined in the specification, and the definition recites specifics that the Examiner alleges to be missing ("bounds as to size"). Thus, the term "aryl" is not incompletely defined. Therefore, reciting the definition for "aryl" in the claims is not necessary.

b. arylalkyl

The Examiner alleges that the term "arylalkyl" is incompletely defined because "said terms typically i) lack any upper bounds as to size." Applicant respectfully disagrees. The term "arylalkyl" is defined in the specification. For example, see page 11, lines 9-11, which recites:

The term "arylalkyl," alone or in combination, refers to an alkyl radical as defined above in which one hydrogen atom is replaced by an aryl radical as defined above, such as, for example, benzyl, 2-phenylethyl and the like.

The term "arylalkyl" is expressly defined in the specification, and references the terms "alkyl" and "aryl." As discussed above, the specification defines the recitation "aryl" (*e.g.*, see page 9, line 26 through page 10, line 5). In addition, the specification defines the recitation "alkyl" (*e.g.*, see page 8, lines 13-18):

an optionally substituted straight-chain or branched-chain alkyl radical having from 1 to about 12 carbon atoms. The term also includes substituted straight-chain or branched-chain alkyl radicals having from 1 to about 6 carbon atoms as well as those having from 1 to about 4 carbon atoms. Examples of alkyl radicals include methyl, ethyl, *n*-propyl, isopropyl, *n*-butyl, isobutyl, *sec*-butyl, *tert*-butyl, *tert*-amyl, pentyl, hexyl, heptyl, octyl and the like.

The definitions provided in the specification for the terms "alkyl" and "aryl" recites the "upper bounds as to size" that the Examiner alleges to be missing. Thus, one of skill in the art would be apprised of the metes and bounds of the term "arylalkyl" when read in light of the specification. Therefore, reciting the definition for "arylalkyl" in the claims is not necessary.

c. heteroaryl

The Examiner alleges that the term "heteroaryl" is incompletely defined because:
said terms typically

- i) lack any upper bounds as to size,
- and when heteroatoms are suggested said terms
- ii) fail to define which hetero atoms are to be selected from
 - iii) the number of said heteroatoms, or
 - iv) the location(s) or the ring system(s) containing said heteroatom(s) and
 - v) because a proper definition of "optionally substituted" is not present in any independent claim.

Applicant respectfully submits that the specification defines the recitation "heteroaryl" (e.g., see page 10, lines 6-19):

optionally substituted aromatic ring systems containing from about five to about 20 skeletal ring atoms and having one or more heteroatoms such as, for example, oxygen, nitrogen and sulfur. The term heteroaryl also includes optionally substituted aromatic ring systems having from 5 to about 12 skeletal ring atoms, as well as those having from 5 to about 10 skeletal ring atoms. The term heteroaryl may include five- or six-membered heterocyclic rings, polycyclic heteroaromatic ring systems and polyheteroaromatic ring systems where the ring system has two, three or four rings. The terms heterocyclic, polycyclic heteroaromatic and polyheteroaromatic include ring systems containing optionally substituted heteroaromatic rings having more than one heteroatom as described above (e.g., a six membered ring with two nitrogens), including polyheterocyclic ring systems of from two to four rings. The term heteroaryl includes ring systems such as, for example, furanyl, benzofuranyl, chromenyl, pyridyl, pyrrolyl, indolyl, quinoliny, *N*-alkyl pyrrolyl, pyridyl-*N*-oxide, pyrimidoyl, pyrazinyl, imidazolyl, pyrazolyl, oxazolyl, benzothiophenyl, purinyl, indoliziny, thienyl and the like.

The definition set forth in the specification for the term "heteroaryl" recites the "upper bounds as to size" that the Examiner alleges to be missing. The definition also states that the rings include one or more heteroatoms, such as oxygen, nitrogen and sulfur. Thus, Applicant respectfully submits that one of skill in the art, in light of what is known in the art and the teachings of the

specification, would understand what is meant by the recitation "heteroaryl" and would be able to determine the metes and bounds of the claims. Thus, reciting the definition for "heteroaryl" in the claims is not necessary.

d. "optionally substituted"

The term "optionally substituted" is defined in the specification at page 11, line 26 to page 12, line 9, which states:

"Optionally substituted" groups may be substituted or unsubstituted. The substituents of an "optionally substituted" group may include, without limitation, one or more substituents independently selected from the following groups or designated subsets thereof: alkyl, alkenyl, alkynyl, heteroalkyl, haloalkyl, haloalkenyl, haloalkynyl, cycloalkyl, aryl, heteroaryl, arylalkyl, heteroarylalkyl, alkoxy, aryloxy, haloalkoxy, amino, alkylamino, dialkylamino, alkylthio, arylthio, heteroarylthio, oxo, carboxyesters, carboxamido, acyloxy, hydrogen, F, Cl, Br, I, CN, NO₂, NH₂, N₃, NHCH₃, N(CH₃)₂, SH, SCH₃, OH, OCH₃, OCF₃, CH₃, CF₃, C(O)CH₃, CO₂CH₃, CO₂H, C(O)NH₂, OR⁹, SR⁹ and NR¹⁰R¹¹. An optionally substituted group may be unsubstituted (e.g., -CH₂CH₃), fully substituted (e.g., -CF₂CF₃), monosubstituted (e.g., -CH₂CH₂F) or substituted at a level anywhere in-between fully substituted and monosubstituted (e.g., -CH₂CF₃).

Thus, the recitation "optionally substituted" does not imply "that the unnamed substituents is/are open to all possible alternatives" as alleged by the Examiner. As discussed above, claims must be read in view of the specification. Where an explicit definition is provided by the applicant for a term, that definition will control interpretation of the term as it is used in the claim. The term "optionally substituted" is expressly defined in the specification. Thus, reciting that definition in the claims is not necessary.

Furthermore, the USPTO recognizes the use of this term in patent claims. A search of the USPTO database for the time period 1976 to present for patents with the recitation "optionally substituted" in the claims yielded 22,359 patents. While applicant realizes that the prosecution history of one patent is not relevant to another, the widespread use of the recitation "optionally substituted" in claims evidences that one of skill in the art understands the meaning of this term.

Notwithstanding the above, without acquiescing to the Examiner's allegation and solely to expedite issuance of the application, independent claims 1 and 58 are amended herein to recite the substituents encompassed by the recitation "optionally substituted" in the claims.

5. Spiro structures

The Examiner alleges that no heterocyclic or homocyclic spiro examples are included in any of the synthetic schemes or any of the specific compounds in the application.

Without acquiescing to the Examiner's allegation and solely to expedite prosecution, claim 10 is cancelled herein without prejudice or disclaimer and claims 1, 9, 29-31, 49, 50, 58, 63, 71 and 72 are amended to delete recitations where two particular substituents together form a carbocyclic or heterocyclic ring. Thus, the rejection is moot. Applicant expressly reserves the right to pursue the cancelled subject matter in a continuing application.

6. The definitions of variables X and Z

The Examiner suggests that the definitions of variables "X" and "Z" should be separated. Without acquiescing to the Examiner's allegation and solely to expedite prosecution and advance the application to issuance, claims 1 and 58 are amended herein to define the variables "X" and "Z" separately.

REJECTION OF CLAIMS 1-7, 9, 11-18, 20-25, 27-30, 49, 58, 60-62, 64-71, 73 AND 74 UNDER 35 U.S.C. §112, SECOND PARAGRAPH

Claims 1-7, 9, 11-18, 20-25, 27-30, 49, 58, 60-62, 64-71, 73 and 74 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter that applicant regards as the invention because the Examiner alleges that the recitation "optionally substituted" fails "to specify the substituents implied thereby." The Examiner also alleges that the definition for "optionally substituted" in the specification is "inadequate because the definition fails to meet the requirements of the statute for a variety of reasons noted in examiner's response following a previous rejection."

Applicant respectfully traverses the bases for the rejection in turn below.

RELEVANT LAW

Claims are not read in a vacuum but instead are considered in light of the specification and the general understanding of the skilled artisan. *Rosemount Inc. v. Beckman Instruments, Inc.*, 727 F.2d 1540, 1547, 221 USPQ 1, 7 (Fed. Cir. 1984). Claim language is satisfactory if it reasonably apprises those of skill in the art of the bounds of the claimed invention and is as precise as the subject matter permits. *Shatterproof Glass Corp. v. Libby-Owens Ford Col.*, 758 F.2d 613, 624, 225 USPQ 634, 641 (Fed. Cir.), *cert. dismissed*, 106 S.Ct. 340 (1985).

ANALYSIS

"Optionally substituted"

As discussed above, the term "optionally substituted" is defined in the specification (e.g., see page 11, line 26 to page 12, line 9). Claims must be read in view of the specification. Where an explicit definition is provided by the applicant for a term, that definition will control

interpretation of the term as it is used in the claim (see *e.g.*, MPEP § 2106). The term "optionally substituted" is defined in the specification and thus that definition will control interpretation of the claim. Thus, reciting the definition in the claims is not necessary.

Notwithstanding this, without acquiescing to the Examiner's allegation and solely to expedite issuance of the application, independent claims 1 and 58 are amended herein to recite the substituents encompassed by the recitation "optionally substituted" in the claims.

Alleged "Inadequate" Definition

The Examiner does not distinctly recite the alleged deficiencies in the definition for the recitation "optionally substituted" provided in the specification. Applicant respectfully requests that the Examiner restate the rejection with particularity to afford the applicant an opportunity to properly respond. In order to be fully responsive, Applicant provides the following traverse.

The Examiner objects to the definition of "optionally substituted" recited in the specification because it includes the terms "aryl," "arylalkyl" and "heteroaryl" because:

- said terms typically
- i) lack any upper bounds as to size,
- and when heteroatoms are suggested said terms
- ii) fail to define which hetero atoms are to be selected from
 - iii) the number of said heteroatoms, or
 - iv) the location(s) or the ring system(s) containing said heteroatom(s) and
 - v) because a proper definition of "optionally substituted" is not present in any independent claim.

a. aryl

The specification specifically defines the term "aryl." For example, page 9, line 26 through page 10, line 5, recites:

The term "aryl," alone or in combination, refers to an optionally substituted aromatic ring system. The term aryl includes monocyclic aromatic rings, polyaromatic rings and polycyclic aromatic ring systems containing from six to about twenty carbon atoms. The term aryl also includes monocyclic aromatic rings, polyaromatic rings and polycyclic ring systems containing from 6 to about 12 carbon atoms, as well as those containing from 6 to about 10 carbon atoms. The polyaromatic and polycyclic aromatic rings systems may contain from two to four rings. Examples of aryl groups include, without limitation, phenyl, biphenyl, naphthyl and anthryl ring systems.

This definition includes upper bounds as to size. Thus, the term "aryl" is not incompletely defined.

b. arylalkyl

The term "arylalkyl" is defined in the specification. For example, see page 11, lines 9-11, which recites:

The term "arylalkyl," alone or in combination, refers to an alkyl radical as defined above in which one hydrogen atom is replaced by an aryl radical as defined above, such as, for example, benzyl, 2-phenylethyl and the like.

The terms "alkyl" and "aryl" are defined in the specification. As discussed above, the definition for the term "aryl" recites the "upper bounds as to size" that the Examiner alleges to be missing. Thus, the term "arylalkyl" is not incompletely defined.

c. heteroaryl

The specification defines the recitation "heteroaryl" (*e.g.*, see page 10, lines 6-19):

optionally substituted aromatic ring systems containing from about five to about 20 skeletal ring atoms and having one or more heteroatoms such as, for example, oxygen, nitrogen and sulfur. The term heteroaryl also includes optionally substituted aromatic ring systems having from 5 to about 12 skeletal ring atoms, as well as those having from 5 to about 10 skeletal ring atoms. The term heteroaryl may include five- or six-membered heterocyclic rings, polycyclic heteroaromatic ring systems and polyheteroaromatic ring systems where the ring system has two, three or four rings. The terms heterocyclic, polycyclic heteroaromatic and polyheteroaromatic include ring systems containing optionally substituted heteroaromatic rings having more than one heteroatom as described above (*e.g.*, a six membered ring with two nitrogens), including polyheterocyclic ring systems of from two to four rings. The term heteroaryl includes ring systems such as, for example, furanyl, benzofuranyl, chromenyl, pyridyl, pyrrolyl, indolyl, quinoliny, N-alkyl pyrrolyl, pyridyl-N-oxide, pyrimido, pyrazinyl, imidazolyl, pyrazolyl, oxazolyl, benzothiophenyl, purinyl, indoliziny, thienyl and the like.

The definition set forth in the specification for the term "heteroaryl" recites the "upper bounds as to size" that the Examiner alleges to be missing. The definition also states that the rings include one or more heteroatoms, such as oxygen, nitrogen and sulfur. Thus, Applicant respectfully submits that one of skill in the art, in light of what is known in the art and the teachings of the specification, would understand what is meant by the recitation "heteroaryl" and would be able to determine the metes and bounds of the claims. Thus, the term "heteroaryl" is not incompletely defined.

REBUTTAL TO THE EXAMINER'S ARGUMENTS

The Definition of Variable R¹⁸

In the rejection under 35 U.S.C. 112, second paragraph, the Examiner alleges the recitation "may be optionally substituted" has been replaced with the recitation "optionally substituted" in the claims except in the case of variable R¹⁸ in claims 1 and 58. Without

addressing the propriety of the rejection, Applicant respectfully submits that neither claim 1 nor claim 58 recites a variable R¹⁸. Thus, because claims 1 and 58 do not recite a variable R¹⁸, this rejection is moot.

2. (Currently amended) A compound according to claim 1, wherein R¹ is selected from the group consisting of hydrogen, F, Cl, OR⁹, NR¹⁰R¹¹, S(O)_nR⁹, optionally substituted C₁ – C₄ alkyl, optionally substituted C₁ – C₄ haloalkyl and optionally substituted C₁ – C₄ heteroalkyl.

3. (Currently amended) A compound according to claim 2, wherein R¹ is selected from the group consisting of hydrogen, F, Cl, optionally substituted C₁ – C₄ alkyl, optionally substituted C₁ – C₄ haloalkyl and optionally substituted C₁ – C₄ heteroalkyl.

4. (Currently amended) A compound according to claim 3, wherein R^1 is selected from the group consisting of hydrogen, F and optionally substituted $C_1 - C_4$ alkyl.

5. (Currently amended) A compound according to claim 1, wherein R^2 is selected from the group consisting of hydrogen, F, Cl, Br, I, CF_3 , CF_2Cl , CF_2H , CFH_2 , CF_2OR^9 , CH_2OR^9 , OR^9 , $S(O)_nR^9$, optionally substituted $C_1 - C_6$ alkyl, optionally substituted $C_1 - C_6$ haloalkyl, optionally substituted $C_1 - C_6$ heteroalkyl, optionally substituted $C_2 - C_6$ alkynyl and optionally substituted $C_2 - C_6$ alkenyl.

6. (Currently amended) A compound according to claim 5, wherein R^2 is selected from the group consisting of hydrogen, F, Cl, CF_3 , CF_2Cl , CF_2H , CFH_2 , optionally substituted $C_1 - C_4$ alkyl, optionally substituted $C_1 - C_4$ haloalkyl and optionally substituted $C_1 - C_4$ heteroalkyl.

7. (Currently amended) A compound according to claim 6, wherein R^2 is selected from the group consisting of hydrogen, optionally substituted $C_1 - C_2$ alkyl, optionally substituted $C_1 - C_2$ haloalkyl and optionally substituted $C_1 - C_2$ heteroalkyl.

8. (Original) A compound according to claim 7, wherein R^2 is CF_3 .

9. (Currently amended) A compound according to claim 1, wherein R^3 is selected from the group consisting of hydrogen, optionally substituted $C_1 - C_6$ alkyl, optionally substituted $C_1 - C_6$ haloalkyl, optionally substituted $C_1 - C_6$ heteroalkyl, $C(Y)OR^{11}$ and $C(Y)NR^{10}R^{11}$; or

R^3 and R^6 taken together form a three to eight membered saturated or unsaturated carbocyclic ring.

10. (Original) A compound according to claim 9, wherein R^3 and R^6 taken together form a four to six membered saturated or unsaturated carbocyclic ring.

11. (Currently amended) A compound according to claim 9, wherein R^3 is selected from the group consisting of hydrogen, optionally substituted $C_1 - C_4$ alkyl, optionally substituted $C_1 - C_4$ haloalkyl and optionally substituted $C_1 - C_4$ heteroalkyl.

12. (Currently amended) A compound according to claim 1, wherein R^6 is selected from the group consisting of hydrogen, CF_3 , CF_2Cl , CF_2H , CFH_2 , optionally substituted $C_1 - C_6$ alkyl, optionally substituted $C_1 - C_6$ haloalkyl, optionally substituted $C_1 - C_6$ heteroalkyl, optionally substituted aryl, optionally substituted arylalkyl, optionally substituted heteroaryl, optionally substituted $C_2 - C_6$ alkynyl and optionally substituted $C_2 - C_6$ alkenyl.

13. (Currently amended) A compound according to claim 12, wherein R⁶ is selected from the group consisting of hydrogen, CF₃, CF₂Cl, CF₂H, CFH₂, optionally substituted C₁ – C₄ alkyl, optionally substituted C₁ – C₄ haloalkyl, optionally substituted C₁ – C₄ heteroalkyl, optionally substituted C₂ – C₄ alkynyl and optionally substituted C₂ – C₄ alkenyl.

14. (Currently amended) A compound according to claim 13, wherein R⁶ is selected from the group consisting of hydrogen, CF₃, CF₂Cl, CF₂H, CFH₂, optionally substituted C₁ – C₄ alkyl, optionally substituted C₁ – C₄ haloalkyl and optionally substituted C₁ – C₄ heteroalkyl.

15. (Currently amended) A compound according to claim 12, wherein R⁶ is selected from the group consisting of optionally substituted aryl, optionally substituted arylalkyl and optionally substituted heteroaryl.

16. (Currently amended) A compound according to claim 1, wherein R⁵ is selected from the group consisting of hydrogen, CF₃, CF₂Cl, CF₂H, CFH₂, optionally substituted C₁ – C₆ alkyl, optionally substituted C₁ – C₆ haloalkyl, optionally substituted C₁ – C₆ heteroalkyl, optionally substituted C₂ – C₆ alkynyl, optionally substituted C₂ – C₆ alkenyl.

17. (Currently amended) A compound according to claim 16, wherein R⁵ is selected from the group consisting of hydrogen, CF₃, CF₂Cl, CF₂H, CFH₂, optionally substituted C₁ – C₆ alkyl, optionally substituted C₁ – C₆ haloalkyl and optionally substituted C₁ – C₆ heteroalkyl.

18. (Currently amended) A compound according to claim 17, wherein R⁵ is selected from the group consisting of hydrogen, CF₃, CF₂Cl, CF₂H, CFH₂, optionally substituted C₁ – C₄ alkyl, optionally substituted C₁ – C₄ haloalkyl and optionally substituted C₁ – C₄ heteroalkyl.

19. (Original) A compound according to claim 18, wherein R⁵ is hydrogen or CF₃.

20. (Currently amended) A compound according to claim 1, wherein R⁷ is selected from the group consisting of hydrogen, F, Cl, optionally substituted C₁ – C₄ alkyl, optionally substituted C₁ – C₄ haloalkyl and optionally substituted C₁ – C₄ heteroalkyl.

21. (Currently amended) A compound according to claim 1, wherein R⁸ is selected from the group consisting of hydrogen, F, Cl, optionally substituted C₁ – C₄ alkyl, optionally substituted C₁ – C₄ haloalkyl and optionally substituted C₁ – C₄ heteroalkyl.

22. (Original) A compound according to claim 21, wherein R^7 and R^8 are each hydrogen or optionally substituted $C_1 - C_2$ alkyl.

23. (Currently amended) A compound according to claim 1, wherein R^9 is selected from the group consisting of hydrogen, optionally substituted $C_1 - C_6$ alkyl, optionally substituted $C_1 - C_6$ haloalkyl and optionally substituted $C_1 - C_6$ heteroalkyl.

24. (Currently amended) A compound according to claim 23, wherein R^9 is selected from the group consisting of hydrogen and optionally substituted $C_1 - C_4$ alkyl.

25. (Currently amended) A compound according to claim 1, wherein R^{10} is selected from the group consisting of hydrogen, $S(O)R^{12}$, SO_2R^{12} , $C(O)R^{12}$, CO_2R^{12} , optionally substituted $C_1 - C_6$ alkyl, optionally substituted $C_1 - C_6$ haloalkyl and optionally substituted $C_1 - C_6$ heteroalkyl.

26. (Currently amended) A compound according to claim 25, wherein R^{10} is selected from the group consisting of hydrogen, $S(O)R^{12}$, SO_2R^{12} , $C(O)R^{12}$ and CO_2R^{12} .

27. (Currently amended) A compound according to claim 1, wherein R^4 is selected from the group consisting of hydrogen, optionally substituted $C_1 - C_4$ alkyl, optionally substituted $C_1 - C_4$ haloalkyl and optionally substituted $C_1 - C_4$ heteroalkyl.

28. (Currently amended) A compound according to claim 27, wherein R^4 is selected from the group consisting of hydrogen and optionally substituted $C_1 - C_2$ alkyl.

29. (Currently amended) A compound according to claim 1, wherein R^{13} is selected from the group consisting of CF_3 , CF_2Cl , CF_2H , CFH_2 , CH_2CF_3 , CH_2CF_2Cl , CH_2CCl_2F , optionally substituted $C_1 - C_6$ alkyl, optionally substituted $C_3 - C_6$ cycloalkyl, optionally substituted $C_1 - C_6$ haloalkyl, optionally substituted $C_1 - C_6$ heteroalkyl, optionally substituted $C_2 - C_6$ alkenyl, optionally substituted $C_2 - C_6$ alkynyl, optionally substituted aryl, optionally substituted heteroaryl, optionally substituted arylalkyl and optionally substituted heteroarylalkyl; or

R^6 and R^{13} taken together form a five to seven membered saturated or unsaturated heterocyclic ring.

30. (Currently amended) A compound according to claim 29, wherein R^{13} is selected from the group consisting of CF_3 , CF_2Cl , CF_2H , CFH_2 , CH_2CF_3 , CH_2CF_2Cl , CH_2CCl_2F , optionally substituted $C_1 - C_4$ alkyl, optionally substituted $C_1 - C_4$ haloalkyl, optionally

substituted C₁ – C₄ heteroalkyl, optionally substituted C₂ – C₄ alkenyl and optionally substituted aryl; or

R⁶ and R¹³ taken together form a five to six membered saturated or unsaturated heterocyclic ring.

31. (Currently amended) A compound according to claim 30, wherein R¹³ is selected from the group consisting of CF₃, CF₂Cl, CF₂H, CFH₂, CH₂CF₃, CH₂CF₂Cl, CH₂CCl₂F, methyl, ethyl, propyl, isopropyl, isobutyl, cyclopropylmethyl, allyl; or

R⁶ and R¹³ taken together form a five membered saturated or unsaturated heterocyclic ring.

Claims 32 – 36 (Cancelled).

37. (Original) A compound according to claim 1, wherein m is 0 or 1.

38. (Original) A compound according to claim 37, wherein m is 1.

39. (Currently amended) A compound according to claim 1, wherein W is selected from the group consisting of NH, N{R¹³}, N{C(Y)R¹¹} and N{SO₂R¹¹}.

40. (Original) A compound according to claim 39, wherein W is NH or N{R¹³}.

41. (Currently amended) A compound according to claim 1, wherein X is selected from the group consisting of O, S, NH and N{R¹¹}.

42. (Currently amended) A compound according to claim 41, wherein X is O or S.

44. (Canceled)

45. (Currently amended) A compound according to claim 1, wherein Z is selected from the group consisting of NH, N{R¹¹} and O.

46. (Original) A compound according to claim 45, wherein Z is NH or N{R¹¹}.

47. (Canceled)

48. (Canceled)

49. (Currently amended) A compound according to claim 1, wherein:

R¹ is selected from the group consisting of hydrogen, F, Cl, OR⁹, S(O)_nR⁹, NR¹⁰R¹¹, optionally substituted C₁ – C₄ alkyl, optionally substituted C₁ – C₄ haloalkyl and optionally substituted C₁ – C₄ heteroalkyl;

R^2 is selected from the group consisting of hydrogen, F, Cl, Br, I, CF_3 , CF_2Cl , CF_2H , CFH_2 , CF_2OR^9 , CH_2OR^9 , OR^9 , $S(O)_nR^9$, optionally substituted $C_1 - C_6$ alkyl, optionally substituted $C_1 - C_6$ haloalkyl, optionally substituted $C_1 - C_6$ heteroalkyl, optionally substituted $C_2 - C_6$ alkynyl and optionally substituted $C_2 - C_6$ alkenyl;

R^3 is selected from the group consisting of hydrogen, optionally substituted $C_1 - C_6$ alkyl, optionally substituted $C_1 - C_6$ haloalkyl, optionally substituted $C_1 - C_6$ heteroalkyl, $C(Y)OR^{11}$ and $C(Y)NR^{10}R^{11}$; or

R^3 and R^6 taken together form a three to eight membered saturated or unsaturated carbocyclic ring;

R^5 is selected from the group consisting of hydrogen, CF_3 , CF_2Cl , CF_2H , CFH_2 , optionally substituted $C_1 - C_6$ alkyl, optionally substituted $C_1 - C_6$ haloalkyl, optionally substituted $C_1 - C_6$ heteroalkyl, optionally substituted $C_2 - C_6$ alkynyl and optionally substituted $C_2 - C_6$ alkenyl;

R^6 is selected from the group consisting of hydrogen, CF_3 , CF_2Cl , CF_2H , CFH_2 , optionally substituted $C_1 - C_6$ alkyl, optionally substituted $C_1 - C_6$ haloalkyl, optionally substituted $C_1 - C_6$ heteroalkyl, optionally substituted aryl, optionally substituted arylalkyl, optionally substituted heteroaryl, optionally substituted $C_2 - C_6$ alkynyl and optionally substituted $C_2 - C_6$ alkenyl; or

R^6 and R^{13} taken together form a five to seven membered saturated or unsaturated heterocyclic ring.

50. (Currently amended) A compound according to claim 49, wherein:

R^7 is selected from the group consisting of hydrogen, F, Cl, optionally substituted $C_1 - C_4$ alkyl, optionally substituted $C_1 - C_4$ haloalkyl and optionally substituted $C_1 - C_4$ heteroalkyl;

R^8 is selected from the group consisting of hydrogen, F, Cl, optionally substituted $C_1 - C_4$ alkyl, optionally substituted $C_1 - C_4$ haloalkyl and optionally substituted $C_1 - C_4$ heteroalkyl; and

R^{13} is selected from the group consisting of CF_3 , CF_2Cl , CF_2H , CFH_2 , CH_2CF_3 , CH_2CF_2Cl , CH_2CCl_2F , optionally substituted $C_1 - C_6$ alkyl, optionally substituted $C_1 - C_6$ haloalkyl, optionally substituted $C_1 - C_6$ heteroalkyl, optionally substituted $C_3 - C_6$ cycloalkyl, optionally substituted $C_2 - C_6$ alkenyl, optionally substituted $C_2 - C_6$ alkynyl, optionally substituted aryl, optionally substituted heteroaryl, optionally substituted arylalkyl and optionally substituted heteroarylalkyl; or

R^6 and R^{13} taken together form a five to seven membered saturated or unsaturated heterocyclic ring; and

R^{18} is selected from the group of hydrogen, F, Cl, OR^{16} , SR^{16} , $NR^{16}R^{17}$, C_1-C_4 alkyl, and optionally substituted C_1-C_4 haloalkyl.

51. (Currently amended) A compound according to claim 50, wherein:

m is 0 or 1;

W is selected from the group consisting of NH, $N\{R^{13}\}$, $N\{C(Y)R^{11}\}$ and $N\{SO_2R^{11}\}$;

X is selected from the group consisting of O, S, NH and $N\{R^{11}\}$;

Y is O or S; and

Z is selected from the group consisting of NH, $N\{R^{11}\}$ and O.

Claims 52 – 55 (Cancelled).

56. (Currently amended) A compound according to claim 1, wherein said compound is selected from the group consisting of:

REMARKS

This Amendment and Response is submitted in response to the Office Action, mailed May 3, 2005 (Office Action). A check for \$1020 for the fee for a three-month extension of time accompanies this response. Any fees that may be due in connection with the filing of this paper or with this application may be charged to Deposit Account No. 06-1050. If a Petition for Extension of Time is needed, this paper is to be considered such Petition.

Claims 1-30, 37-42, 45, 46, 49-51, 56-72 and 75-77 are pending. Claims 32-36, 43, 44, 47, 48, 52-55, 74, 74 and 80-107 are cancelled without prejudice or disclaimer. Applicant expressly reserves the right to pursue the cancelled subject matter in a continuing application. Claims 1-7, 9, 11-18, 20, 21, 23-31, 39, 41, 45, 49-51, 56-58, 60-72 and 76 are amended to recite more conventional claim language and to more distinctly claim the subject matter. Support for the amendment is found throughout the specification and, in particular, in the respective claims as originally filed.

Claims 1, 41, 42, 50, 51, 58 and 77 are amended to remove certain formulae and substituents in the definitions. Support for the amendment can be found throughout the specification, for example at page 17, line 8 through page 27, line 1 and in the claims as originally filed. Applicant expressly reserves the right to pursue the cancelled subject matter in a continuing application. Claims 56 and 57 are amended to be independent claims. No new matter has been added by reason of these amendments.

Informalities

Incorporation By Reference

The Examiner maintains the previous objection to the incorporation by reference of certain material in the specification (Office Action at page 2). Specifically, the Examiner alleges "anything incorporated by reference outside of the Background portion of the disclosure is assumed to be part of the invention and must be essential" (Office Action, page 3). The Examiner alleges that references at page 110, line 22 and at page 111, lines 25-26 describing the "co-transfection assay" constitute essential material. This rejection is respectfully traversed.

As pointed out in the previous Response, filed February 2, 2005, incorporation by reference of "essential material" and "nonessential material" is discussed in the MPEP at MPEP § 608.01(p)(I). For example, MPEP § 608.01(p)(I)(A) states:

"Essential material" is defined as that which is "necessary to (1) describe the claimed invention, (2) provide an enabling disclosure of the claimed invention, or (3) describe the best mode (35 U.S.C. 112)" ...

In addition, Applicant respectfully submits that § 1.57(c) of the Patent Rules, directed to Incorporation by reference, defines "essential material" as material that is necessary to:

- (1) Provide a written description of the claimed invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same, and set forth the best mode contemplated by the inventor of carrying out the invention as required by the first paragraph of 35 U.S.C. 112;
- (2) Describe the claimed invention in terms that particularly point out and distinctly claim the invention as required by the second paragraph of 35 U.S.C. 112; or
- (3) Describe the structure, material, or acts that correspond to a claimed means or step for performing a specified function as required by the sixth paragraph of 35 U.S.C. 112.

All other material is considered "nonessential material" (see paragraph (d)). Nonessential subject matter is subject matter referred to for purposes of indicating the background of the invention or illustrating the state of the art. MPEP § 608.01(p)(I) also states that

Nonessential subject matter may be incorporated by reference to (1) patents or applications published by the United States or foreign countries or regional patent offices, (2) prior filed, commonly owned U.S. applications, or (3) non-patent publications....

The references objected to by the Examiner are Evans *et al.* on page 110, line 22, US Pat. Nos. 4,981,784 and 5,071,773 to Evans *et al.* on page 110, lines 25-26 and Berger *et al.* on page 111, lines 8-9. These references describe a co-transfection assay that mimics an *in vivo* system in the laboratory. None of the instant claims is directed to a co-transfection assay; the claims are directed to compounds and compositions. Assays are not claimed; nor is a particular assay required. Those of skill in the art can use any of a variety of known assays. The material incorporated by reference evidences this. Thus, the material incorporated by reference does not describe the "claimed invention" under MPEP § 608.01(p)(I)(A).

In addition, as previously submitted, the application describes the co-transfection assay and provides sufficient detail to allow one of skill in the art to practice the assay. The Examiner's attention is directed to the Biological Examples section of the application on page 110, line 20 through page 114, line 5. For example, Example B of the Biological Examples section, page 112, line through page 114, line, entitled Co-transfection assay, provides a detailed description of the assay. Hence, the material incorporated by reference is not required to provide an enabling disclosure, nor to describe the best mode (35 U.S.C. 112). Since the material incorporated by reference describes the state of the art and is not encompassed by the definition of "essential material" as set forth under MPEP § 608.01(p)(I)(A) or § 1.57(c) of the

Patent Rules, applicant respectfully submits that it is nonessential subject matter, under the definitions as set forth in § 1.57(c)-(d) of the Patent Rules.

In the Office Action, the Examiner states that "[t]he rule being advanced is that anything incorporated by reference outside of the Background portion of the disclosure is assumed to be part of the invention and must be essential" (Office Action at page 3). The Examiner suggests moving the passages containing incorporation by reference to the Background section in order to satisfy this "rule" (*Id.*). Applicant is aware of no such "rule" and respectfully requests that the Examiner cite authority for it. The Examiner's attention is directed to § 1.57(b) of the Patent Rules, Incorporation by Reference, which states:

- (b) Except as provided in paragraph (a) of this section, an incorporation by reference must be set forth **in the specification** and must:
 - (1) Express a clear intent to incorporate by reference by using the root words "incorporat(e)" and "reference" (e.g., "incorporate by reference"); and
 - (2) Clearly identify the referenced patent, application, or publication.
[emphasis added]

Under this Rule, an incorporation by reference must be set forth in the specification. There is no indication that all incorporations by reference outside of the Background section are to be deemed "essential subject matter."

A purpose for allowing material to be incorporated by reference is to minimize unnecessary bulk of patent application specifications. See *General Electric Co. v. Brenner*, 159 U.S.P.Q. 338 (D.C. Cir. 1968) (famously lamenting that "[f]iling cabinets abhor redundancy. Warehouses covet their space . . ."). Redundancy, whether in the background section or any other portion of the specification, may be avoided by incorporation by reference. The passage at issue describes an assay that can be used to characterize the subject matter, but which is not claimed. This is precisely the sort of information that can be incorporated by reference to avoid unwieldy applications. It also is appropriate to include the body of the specification in the section related to such assays where it assists the reader, rather than in the Background section as the Examiner insists.

Applicant further notes that the Examiner alleges that "Applicant's response also suggests that applicant presumes the right to determine for the USPTO what references are 'essential' and what references are not" (Action at page 3). Applicant acknowledges that the Office has "considerable discretion in determining what may or may not be incorporated by reference in a patent application" (MPEP § 608.01(p) (I)). Applicant must be fully responsive to an Office Action. Applicant respectfully submits that the traverse of the

objection included an analysis of incorporation by reference using the Patent Office's own rules as set forth in MPEP § 608.01(p)(I).

REJECTION OF CLAIMS 1-55, 58-77 AND 80-107 UNDER 35 U.S.C. § 112, FIRST PARAGRAPH – SCOPE

Claims 1-55, 58-77 and 80-107 are rejected under 35 U.S.C. § 112, first paragraph as allegedly containing subject matter that was not described in the specification in such a way as to enable one of skill in the art to make and/or use the claimed subject matter because the scope is allegedly excessive in view of the disclosed exemplifications. The Examiner alleges that because the specification provides "only about 150 compounds" in the Examples section that the disclosure cannot be enabling for the entire scope of claimed compounds. The Examiner also alleges that some compounds that are encompassed by the claims are not "disclosed as having been synthesized within the examples," that none of the exemplary compounds discloses "a structure with the multiple layers of substituents on top of substituents provided by the claims" and that none of the examples "provides a complete description of how to make same."

Applicant respectfully traverses the rejection.

RELEVANT LAW

The test of enablement is whether one skilled in the art can make and use what is claimed based upon the disclosure in the application and information known to those of skill in the art without undue experimentation. *United States v. Teletronics, Inc.*, 8 USPQ2d 1217 (Fed. Cir. 1988). A certain amount of experimentation is permissible as long as it is not undue. To satisfy the enablement requirement of 35 U.S.C § 112, first paragraph, the specification must teach one of skill in the art to make and use the invention without undue experimentation. *Atlas Powder Co. v. E.I. DuPont de Nemours*, 750 F.2d 1569, 224 USPQ 409 (1984). This requirement can be satisfied by providing sufficient disclosure, either through illustrative examples or terminology, to teach one of skill in the art how to make and how to use the claimed subject matter without undue experimentation. This clause does not require "a specific example of everything within the scope of a broad claim." *In re Anderson*, 176 USPQ 331, at 333 (CCPA 1973), emphasis in original.

The "invention" referred to in the enablement requirement of section 112 is the claimed subject matter. *Lindemann Maschinen-fabrik v. American Hoist and Derrick Co.*, 730 F.2d 1452, 1463, 221 USPQ 481, 489 (Fed. Cir. 1984) ("The question is whether the disclosure is sufficient to enable those skilled in the art to practice the claimed invention");

Raytheon Co. v. Roper Corp., 724 F.2d 951, 956, 220 USPQ 592, 596 (Fed. Cir. 1983), *cert. denied*, 469 U.S. 835, 225 USPQ 232 (1984).

As a matter of Patent Office practice, then, a specification disclosure which contains a teaching of the manner and process of making and using the invention in terms which correspond in scope to those used in describing and defining the subject matter sought to be patented must be taken as in compliance with the enabling requirement of the first paragraph of § 112 unless there is reason to doubt the objective truth of the statements contained therein which must be relied on for enabling support. Assuming that sufficient reason for such doubt does exist, a rejection for failure to teach how to make and/or use will be proper on that basis; such a rejection can be overcome by suitable proofs indicating that the teaching contained in the specification is truly enabling. . . it is incumbent upon the Patent Office, whenever a rejection on this basis is made, to explain why it doubts the truth or accuracy of any statement in a supporting disclosure and to back up assertions of its own with evidence or reasoning which is inconsistent with the contested statement.

Id. (emphasis in original); *See also Fiers v. Revel*, 984 F.2d 1164, 1171-72, 25 USPQ2d 1601, 1607 (Fed. Cir. 1993);, *Gould v. Mossinghoff*, 229 USPQ 1, 13 (D.D.C. 1985), *aff'd in part, vacated in part, and remanded sub nom. Gould v. Quigg*, 822 F.2d 1074, 3 USPQ2d 1302. A patent application need not teach, and preferably omits, what is well known in the art. *Spectra-Physics, Inc. v. Coherent, Inc.*, 3 USPQ2d 1737 (Fed. Cir. 1987).

The inquiry with respect to scope of enablement under 35 U.S.C. § 112, first paragraph, is whether it would require undue experimentation to make and use the subject matter as claimed. A considerable amount of experimentation is permissible, particularly if it is routine experimentation. The amount of experimentation that is permissible depends upon a number of factors, which include: the quantity of experimentation necessary, the amount of direction or guidance presented, the presence or absence of working examples, the nature of the invention, the state of the prior art, the relative skill of those in the art, the predictability of the art, and the breadth of the claims. *Ex parte Forman*, 230 USPQ 546 (Bd. Pat. App. & Int'l 1986); *see also In re Wands*, 8 USPQ2d 1400 (Fed. Cir. 1988).

The starting point in an evaluation of whether the enablement requirement is satisfied is an analysis of each claim to determine its scope. The focus of the inquiry is whether everything within the scope of the claim is enabled. As concerns the breadth of a claim relevant to enablement, the only relevant concern should be whether the scope of enablement provided to one skilled in the art by the disclosure is commensurate with the scope of protection sought by the claims. *In re Moore*, 439 F.2d 1232, 169 USPQ 236 (CCPA 1971). Once the scope of the claims is addressed, a determination must be made as to whether one

skilled in the art is enabled to make and use the entire scope of the claimed invention without undue experimentation.

The requirements of 35 USC §112, first paragraph, can be fulfilled by the use of illustrative examples or by broad terminology. *In re Anderson*, 176 USPQ 331, 333 (CCPA 1973):

... we do not regard section 112, first paragraph, as requiring a specific example of everything within the scope of a broad claim What the Patent Office is here apparently attempting is to limit all claims to the specific examples, not withstanding the disclosure of a broader invention. This it may not do.

In re Grimme, Keil and Schmitz, 124 USPQ 449, 502 (CCPA 1960) :

It is manifestly impracticable for an applicant who discloses a generic invention to give an example of every species falling within it, or even to name every such species. It is sufficient if the disclosure teaches those skilled in the art what the invention is and how to practice it.

ANALYSIS

The Office Action fails to establish a prima facie case of lack of enablement pursuant to 35 U.S.C. § 112, first paragraph.

The test of enablement is not whether an example of everything within the scope of the claims is provided in the specification. The test of enablement is whether one skilled in the art can make and use what is claimed based upon the disclosure in the application and information known to those of skill in the art without undue experimentation. *United States v. Telectronics, Inc.*, 8 USPQ2d 1217 (Fed. Cir. 1988). A certain amount of experimentation is permissible as long as it is not undue.

In the previous Action, the Examiner stated that the amount of direction provided is limited to the chemical synthesis of numerous [1,4]oxazino[2,3-*f*]quinolin-8-ones and data identifying which compounds are agonists or antagonists and alleges that no other chemical species has been disclosed as having been synthesized, isolated or subjected to any testing to determine possible medicinal activity. Applicant respectfully disagrees.

The specification teaches seven generic synthesis schemes (for example, see page 33, 35, 37, 38, 39, 41 and 42). The application names over 150 exemplary AR modulator compounds (for example, see page 29 through 32 and claims 56 and 57). The specification also provides over 50 working examples and two screening assays. It is respectfully submitted that the direction provided by the specification is sufficient to allow one of skill in the art to synthesize, test and administer any and all compounds of the claimed subject matter. One skilled in the art will recognize that the generic schemes may be used to synthesize such

compounds, though they also may be synthesized using other techniques known to those of skill in the art. Similarly, one of skill in the art may assess certain compounds of the present invention using the binding assay or the co-transfection assay, both of which are disclosed in the specification, though one of skill in the art may assess compounds using other known assays. Finally, administration of compounds is routine to one of skill in the medical arts.

Notwithstanding this, solely to expedite prosecution of this application, applicant has amended claims 1 and 58 to cancel formulae II, III, and IV, along with certain R-group substituents, without prejudice or disclaimer. Applicant asserts that the cancelled subject matter is fully enabled by the specification, as discussed above, in the traverse of the enablement rejection below and in the previous Response, and applicant reserves the right to pursue such subject matter in a continuing application.

REBUTTAL TO THE EXAMINER'S ARGUMENTS

Within the "scope" rejection under 35 U.S.C. § 112, first paragraph, the Examiner suggests that "the term 'optionally substituted' should be specifically defined in the independent claims (claims 1 and 58)" Office Action at page 4 (emphasis in original); and again at page 7. Applicant respectfully submits that this rejection appears to be more appropriate under 35 U.S.C. § 112, second paragraph, where it also has been raised by the Examiner. Accordingly, this issue will be addressed more fully in the traverse under 35 U.S.C. § 112, second paragraph, below.

Applicant respectfully disagrees with the Examiner's explanation that "[a]nyone reading the original or the amended claims or both would not have otherwise known that 'hydroxyl' was an 'optional substituent.'" *Id.* Claims must be read in view of the specification. See e.g., MPEP § 2106 ("An applicant is entitled to be his or her own lexicographer, and in many instances will provide an explicit definition for certain terms used in the claims. Where an explicit definition is provided by the applicant for a term, that definition will control interpretation of the term as it is used in the claim."); MPEP § 608.01(o) ("The meaning of every term used in any of the claims should be apparent from the descriptive portion of the specification"); MPEP § 2173.05 ("When the specification states the meaning that a term in the claims is intended to have, the claim is examined using that meaning in order to achieve a complete exploration of the applicant's invention and its relation to the prior art."). The term "optionally substituted" is expressly defined in the specification. Thus, that definition will control interpretation of the term as it is used in the claim. Reciting the definition in the claims is unnecessary.

REJECTION OF CLAIMS 1-55, 58-77 AND 80-107 UNDER 35 U.S.C. § 112, FIRST PARAGRAPH – ENABLEMENT

The Examiner separately rejects claims 1-55, 58-77, and 80-107 as allegedly not enabled. The Examiner identifies the *In re Wands* factors, which Applicants previously discussed in Response to the February Action, the content of which is repeated here by incorporation by reference. These factors will now be considered again.

As a preliminary matter, claims 80-107 are cancelled herein without prejudice or disclaimer. Applicant does not acquiesce to the rejection. The claims are cancelled in order to advance this application to allowance. Applicant reserves the right to pursue these claims in a continuing application.

ANALYSIS

Applying the above-noted factors to the instant facts reveals that the amount of experimentation is not undue.

1. The scope of the claims.

Claim 1 is directed to compounds of formula I and claims 2-57 ultimately depend from claim 1 and are directed to various embodiments thereof. Claim 58 is directed to pharmaceutical compositions including a pharmaceutically acceptable carrier and a compound of formula I, and claims 59-77 ultimately depend from claim 58 and are directed to various embodiments thereof.

The Examiner alleges that the “breadth of the compound claims is excessive,” asserting that “the term ‘may be optionally substituted’ without specifying the substituents implied thereby renders the breadth excessive because said term implies that the unnamed substituents is/are open to all possible alternatives” (Office Action at page 5). Applicant respectfully points out that the term “optionally substituted” is defined in the specification at page 11 line 26 to page 12, line 9, which states:

“Optionally substituted” groups may be substituted or unsubstituted. The substituents of an “optionally substituted” group may include, without limitation, one or more substituents independently selected from the following groups or designated subsets thereof: alkyl, alkenyl, alkynyl, heteroalkyl, haloalkyl, haloalkenyl, haloalkynyl, cycloalkyl, aryl, heteroaryl, arylalkyl, heteroarylalkyl, alkoxy, aryloxy, haloalkoxy, amino, alkylamino, dialkylamino, alkylthio, arylthio, heteroarylthio, oxo, carboxyesters, carboxamido, acyloxy, hydrogen, F, Cl, Br, I, CN, NO₂, NH₂, N₃, NHCH₃, N(CH₃)₂, SH, SCH₃, OH, OCH₃, OCF₃, CH₃, CF₃, C(O)CH₃, CO₂CH₃, CO₂H, C(O)NH₂, OR⁹, SR⁹ and NR¹⁰R¹¹. An optionally substituted group may be unsubstituted (e.g., -CH₂CH₃), fully substituted (e.g., -CF₂CF₃), monosubstituted (e.g., -CH₂CH₂F) or substituted at a level anywhere in-between fully substituted and monosubstituted (e.g., -CH₂CF₃).

Thus, the recitation does not imply "that the unnamed substituents is/are open to all possible alternatives" as the Examiner asserts. The substituents include only those in the definition of the term.

B. Nature of the Invention

As amended, the claimed subject matter is directed to compounds of Formula I and pharmaceutical compositions that include compounds of Formula I. Claims 1-55 and 58-76 are directed to compounds as defined in the claims and to pharmaceutical compositions thereof.

C. State of the Art

The art of record shows that the skilled artisan can make and use the compounds of the present invention. In the present Action, the Examiner alleges that certain references are anticipatory prior art (Action at page 5) and other art is "very close" (Action at page 8). Although applicant traverses the art rejection below, applicant agrees that the prior art is replete with references that show that the skilled artisan can use known organic synthesis scheme and reactions to produce various bicyclic, tricyclic and polycyclic organic compounds, including, for example, quinolines, quinolinones, coumarins, benzoxazines, oxazolidines, azasteroids, progesterones, azachlormadinones, anthrasteroids, flutamides and phthalimides. The Examiner asserts that "The state of the prior art is defined by the prior art presently cited by applicant and by examiner." Applicant is not aware of that definition and respectfully requests that the Examiner cite authority.

D. Level of Skill in the Art

The Examiner states that the skill in the art of chemical synthesis is high. Applicant agrees with this assessment. That skill, together with the instant specification and the known art, allow the skilled artisan to make any and all of the claimed compounds. Therefore, the amount of disclosure required to meet the enablement requirement is minimal.

The Examiner notes that "the level of skill in the medicinal arts is moderate because it is unclear which if any of the compounds disclosed herein are active against one or more specific disease conditions." Office Action at page 5. Applicant respectfully disagrees. The level of skill in the medical arts is high. This is evidenced by the art in this area, which is authored primarily by those with Ph.D. and M.D. degrees and is intended for an audience of similarly highly skilled individuals, primarily in the fields of biochemical, pharmaceutical, or medical arts. The numerous articles and patents made of record in this application, authored and reviewed by those known in the art, address a highly skilled audience, and further

evidence the high level of skill in this art. Therefore, the amount of disclosure required to meet the enablement requirement is minimal.

E. Level of Predictability

The art of chemical synthesis is predictable and is dictated by recognized chemical reactions and constraints. The medical arts are also predictable, in that various assays and models that mimic an *in vivo* system in the laboratory were available and known to the skilled artisan at the time of filing of the application. For example, see U.S. Pat. No. 5,071,773 to Evans *et al.* (1991), which teaches a bioassay for evaluating whether compounds are functional ligands for receptor proteins. Such assays are routine in the medical arts. Thus, it is not necessary that one skilled in the art be able to predict which compound will be most active for a particular medical application. The specification, in view of the skill in the art, describes how to make and administer, and if necessary test, any claimed compound. As discussed above, the level of knowledge and skill in the preparation, isolation and manipulation of compounds was high as of the filing date of the instant application. Thus, in view of the teachings of the specification, in combination with what was known at the time the original application was filed, applicant respectfully submits that the claimed compounds can be prepared predictably using any methods disclosed in the specification or that are known to those skilled in this art. Further, formulating such compounds into a pharmaceutical composition and administration of such compositions to a subject is well known in the medical arts. Thus, preparation and administration of pharmaceutical compounds is also predictable.

F. Amount of Direction Provided

The Examiner alleges that the direction provided by the specification is limited to the chemical syntheses of [1,4]oxazino[2,3-*f*]-quinolin-8-ones and providing data identifying which compounds are antagonists and which are agonists of known androgen receptors. Applicant respectfully disagrees. The specification provides a general description of non-steroidal compounds that are high-affinity, high-specificity agonists, partial agonists (i.e., partial activators and/or tissue-specific activators) and antagonists for androgen receptors. The application discloses compounds, pharmaceutical compositions containing such compounds and methods of using such compounds and pharmaceutical compositions for modulating processes mediated by steroid receptors. The application names over 150 exemplary compounds (for example, see page 29 through 32 and claims 56 and 57). The application also discloses methods of making such compounds as well as intermediates used in their synthesis, providing seven generic synthesis schemes (for example, see page 33, 35,

37, 38, 39, 41 and 42). One of skill in the art can readily follow these schemes or known variations of such schemes with any of a vast number of commonly available starting materials to arrive at the full scope of the claimed subject matter.

G. Working Examples

The specification provides synthesis schemes and over 50 working examples directed to chemical methods of preparing compounds within the scope of the claims. The application names over 150 exemplary compounds. The specification also provides biological examples for testing and using the compounds, including the co-transfection assay and binding assay and results of analysis of exemplary compounds.

Hence the specification provides a variety of examples of compounds that fall within the scope of the claims evidencing that the claimed compounds function as claimed. The specification also provides two screening assays. As discussed above, various screening assays for assessing the ability of a compound or composition to modulate the transcriptional ability of intracellular receptors are known to those of skill in the art, such as those described in U.S. Pat. Nos. 4,981,784, 5,071,773, 5,298,429, and 5,506,102 and in WO89/05355, WO91/06677, WO92/05447, WO93/11235, WO93/23431, WO94/23068, WO95/18380 and CA 2,034,220. The requirements of 35 U.S.C. §112, first paragraph, do not require a specific example of everything within the scope of the claims. *In re Anderson*, 176 USPQ 331, 333 (CCPA 1973).

H. Quantity of Experimentation Required

The direction provided by the specification is sufficient to allow one of skill in the art to synthesize, test and administer any and all compounds of the invention as claimed. One skilled in the art will recognize that the generic schemes may be used to synthesize such compounds, though they also may be synthesized using techniques known to those of skill in the art. Similarly, one of skill in the art may assess certain compounds of the present invention using the binding assay or the co-transfection assay, both of which are disclosed in the specification, though one of skill in the art may assess compounds using other known assays. Finally, administration of compounds is routine to one of skill in the medical arts.

The Examiner states, "the quantity of experimentation needed to make or use the invention based on the content of the disclosure is deemed to be excessive because the instant specification only discloses how to make compounds with a [1,4]oxazino[2,3-*f*]isoquinolin-8-one ring system . . ." Office Action at page 5. Applicant respectfully disagrees. The generic synthesis schemes provided in the specification enable one of skill in the art to prepare far more

compounds than the Examiner admits. There is nothing of record to suggest that the synthesis of any of the claimed compounds or compositions would require development of new procedures or excessive experimentation. Organic synthesis methods have been used for decades. Those of skill in the art, provided the synthesis schemes in the specification and known in the art, can readily synthesize compounds encompassed by the claims using routine experimentation and available starting materials.

As discussed above, bioassays for evaluating whether compounds are functional ligands for receptor proteins were known in the art since at least 1991. Such assays are routine in this art and do not require excessive experimentation. It is noted that the test for undue experimentation "is not merely quantitative, since a considerable amount of experimentation is permissible, if it is merely routine . . ." *In re Wands* 858 F.3d 731, 737 (Fed Cir. 1988). Thus, methods for making and evaluating androgen receptor modulator compounds were available and known to skilled artisans at the time of filing the application. Those skills, together with the teaching of the specification, including cited and incorporated references, allow the skilled artisan to make any and all of the claimed compounds. As discussed previously, it is not necessary that one skilled in the art be able to predict which compound will be most active for a particular medical application. The specification, in view of the skill in the art, enables one to make and administer, and if necessary test, any claimed compound.

CONCLUSION

In light of the scope of the claims, the teachings in the specification, the high level of skill of those in this art, the working examples, and the extensive knowledge of those of skill in this art, it would not require undue experimentation for a person skilled in the art to make and use the claimed compounds and compositions. Accordingly, the applicant respectfully submits that all of the claims are fully enabled by the specification in view of the state of the art at the time of filing. Applicant respectfully requests reconsideration and withdrawal of all rejections under 35 U.S.C. § 112, first paragraph.

Policy Considerations

The Examiner is reminded that applicant is entitled to claims that are commensurate in scope not only with what applicant has specifically exemplified, but commensurate in scope with that which one of skill in the art could obtain by virtue of that which the applicant has disclosed. Moreover, it is unfair, unduly limiting and contrary to the public policy and constitutional mandate that underlie the U.S. patent system to require applicant to limit the instant claims to the compounds specifically discussed in the examples. To do so permits one of skill in this art to

practice the disclosed invention but avoid liability for infringement merely by selecting a species of the disclosed genus not specifically discussed in the examples.

As a broad body of knowledge is available in the area of chemical, it would be unfair, unduly limiting and contrary to the public policy upon which the patent laws are based to require Applicant to limit these claims to the particular exemplary embodiments. See, e.g., *In re Goffe*, 542 F.2d 801, 166 USPQ 85 (CCPA 1970):

for the Board to limit appellant to claims involving the specific materials disclosed in the examples so that a competitor seeking to avoid infringing the claims can merely follow the disclosure and make routine substitutions "is contrary to the purpose for which the patent system exists - to promote progress in the useful arts".

The public purpose on which the patent law rests requires the granting of claims commensurate in scope with the invention disclosed. This requires as much the granting of broad claims on broad inventions as it does the granting of more specific claims on more specific inventions. *In re Sus and Schafer*, 49 CCPA 1301, 306 F.2d 494, 134 USPQ 301, at 304.

To require applicant to further limit the claims would permit those of skill in the art to practice what is disclosed in the specification but avoid infringing claims so-limited. To permit that is simply not fair. The instant application in light of the knowledge of those of skill in the art provides adequate guidance for making and using androgen receptor modulator compounds and compositions. Having done so, it is now routine for others to make minor modifications by any method known in this art. Those of skill in the art should not be permitted to make minor modifications, such as selecting a compound not specifically disclosed in the examples, to avoid infringing such claims.

REBUTTAL TO EXAMINER'S ARGUMENTS

Claims 85, 89, 93, 101 and 107

Beginning at page 7 of the Office Action, the Examiner discusses some remarks made by applicants in the previous Response. In that discussion, the Examiner appears to reject claims 85, 89, 93, 101 and 107 on additional grounds. Applicants do not acquiesce to any of these grounds. However, since claims 80-107 are cancelled without prejudice or disclaimer, Applicants do not address these additional grounds, but reserve the right to pursue these claims in a continuing application.

"Compound and Pharmaceutical Composition Claims"

The Examiner alleges certain generalities regarding the "compound and pharmaceutical composition claims" (see Office Action at page 8). The Examiner asserts that

certain unidentified terms (aryl, arylalkyl, heteroaryl, etc.) are allegedly incompletely defined and "typically" possess any of a number of alleged flaws selected from among:

- i) lack any upper bounds as to size,
and when heteroatoms are suggested said terms
- ii) fail to define which hetero atoms are to be selected from
- iii) the number of said heteroatoms, or
- iv) the location(s) or the ring system(s) containing said heteroatom(s) and
- v) because a proper definition of "optionally substituted" is not present in any independent claim.

The Examiner did not identify all of the claims against which this "enablement rejection" is applied, nor to which terms of the claims the rejection is applied. Applicant requests that the Examiner more fully articulate the rejection so that the applicant can be fully responsive. In order to advance the prosecution of this application, applicant provides the following traverse.

The terms identified by the Examiner are specifically defined in the specification. For example, the definition for "aryl" is recited on page 9, line 26 through page 10, line 5, which recites:

The term "aryl," alone or in combination, refers to an optionally substituted aromatic ring system. The term aryl includes monocyclic aromatic rings, polyaromatic rings and polycyclic aromatic ring systems containing from six to about twenty carbon atoms. The term aryl also includes monocyclic aromatic rings, polyaromatic rings and polycyclic ring systems containing from 6 to about 12 carbon atoms, as well as those containing from 6 to about 10 carbon atoms. The polyaromatic and polycyclic aromatic ring systems may contain from two to four rings. Examples of aryl groups include, without limitation, phenyl, biphenyl, naphthyl and anthryl ring systems.

The definition for "arylalkyl" is recited on page 11, lines 9-11, which recites:

The term "arylalkyl," alone or in combination, refers to an alkyl radical as defined above in which one hydrogen atom is replaced by an aryl radical as defined above, such as, for example, benzyl, 2-phenylethyl and the like.

The definition for "heteroaryl" is recited on page 10, lines 6-19, which recites:

The term "heteroaryl" refers to optionally substituted aromatic ring systems containing from about five to about 20 skeletal ring atoms and having one or more heteroatoms such as, for example, oxygen, nitrogen and sulfur. The term heteroaryl also includes optionally substituted aromatic ring systems having from 5 to about 12 skeletal ring atoms, as well as those having from 5 to about 10 skeletal ring atoms. The term heteroaryl may include five- or six-membered heterocyclic rings, polycyclic heteroaromatic ring systems and polyheteroaromatic ring systems where the ring system has two, three or four rings. The terms heterocyclic, polycyclic heteroaromatic and polyheteroaromatic include ring systems containing optionally substituted heteroaromatic rings having more than one heteroatom as described above (e.g., a six membered ring with two

nitrogens), including polyheterocyclic ring systems of from two to four rings. The term heteroaryl includes ring systems such as, for example, furanyl, benzofuranyl, chromenyl, pyridyl, pyrrolyl, indolyl, quinoliny, N-alkyl pyrrolyl, pyridyl-N-oxide, pyrimidoyl, pyrazinyl, imidazolyl, pyrazolyl, oxazolyl, benzothiophenyl, purinyl, indoliziny, thienyl and the like.

Applicant respectfully points out that the term "optionally substituted" is defined in the specification at page 11, line 26 to page 12, line 9, which states:

"Optionally substituted" groups may be substituted or unsubstituted. The substituents of an "optionally substituted" group may include, without limitation, one or more substituents independently selected from the following groups or designated subsets thereof: alkyl, alkenyl, alkynyl, heteroalkyl, haloalkyl, haloalkenyl, haloalkynyl, cycloalkyl, aryl, heteroaryl, arylalkyl, heteroarylalkyl, alkoxy, aryloxy, haloalkoxy, amino, alkylamino, dialkylamino, alkylthio, arylthio, heteroarylthio, oxo, carboxyesters, carboxamido, acyloxy, hydrogen, F, Cl, Br, I, CN, NO₂, NH₂, N₃, NHCH₃, N(CH₃)₂, SH, SCH₃, OH, OCH₃, OCF₃, CH₃, CF₃, C(O)CH₃, CO₂CH₃, CO₂H, C(O)NH₂, OR⁹, SR⁹ and NR¹⁰R¹¹. An optionally substituted group may be unsubstituted (e.g., -CH₂CH₃), fully substituted (e.g., -CF₂CF₃), monosubstituted (e.g., -CH₂CH₂F) or substituted at a level anywhere in-between fully substituted and monosubstituted (e.g., -CH₂CF₃).

As discussed in more detail below in the traverse of the rejection under 35 U.S.C. § 112, second paragraph, where an explicit definition is provided by the applicant for a term, that definition will control interpretation of the term as it is used in the claim. The claims are read in light of the specification, and the meaning of every term used in any of the claims should be apparent from the descriptive portion of the specification.

Applicants respectfully request that the Examiner reconsider and withdraw this rejection or, in the alternative, identify which claims and terms are subject to this rejection to afford the applicant an opportunity to properly respond with particularity.

REJECTION OF CLAIMS 1-7, 9, 11-18, 20, 21, 23-36, 39, 41, 45, 49-51, 56-58, 60-74, 76, 77 UNDER 35 U.S.C. §112, SECOND PARAGRAPH

Claims 1-7, 9, 11-18, 20, 21, 23-36, 39, 41, 45, 49-51, 56-58, 60-74, 76, 77 and 86-107 are rejected under 35 U.S.C. § 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter that applicant regards as the invention because the Examiner alleges that the recitation "selected from the group of" is incomplete because Markush groups are properly formulated to recite "selected from the group consisting of" (Office Action at page 6).

The rejection is obviated by the amendment of claims 1-7, 9, 11-18, 20, 21, 23-36, 39, 41, 45, 49-51, 56-58, 60-74, 76, 77 and 86-107 herein.

REJECTION OF CLAIMS 1-7, 9, 11-18, 20, 21, 23-36, 39, 41, 45, 49-51, 56-58, 60-74, 76, 77 and 86-107 UNDER 35 U.S.C. §112, SECOND PARAGRAPH

Claims 1-7, 9, 11-18, 20, 21, 23-36, 39, 41, 45, 49-51, 56-58, 60-74, 76, 77 and 86-107 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter that applicant regards as the invention because the Examiner alleges that the recitation "optionally substituted" fails "to specify the substituents implied thereby" (Office Action at pages 9). The Examiner admits that the definition for the recitation "optionally substituted" is found within the specification but states that he "fails to understand why this definition is not found in the independent claims" (Office Action at page 7). The Examiner further alleges that the definition "does not meet the requirements of the statute because for a number of reasons said definition fails to have adequately defined metes and bounds (35 USC §112, 2nd ¶)."

Applicant respectfully traverses the rejection. The term "optionally substituted" is defined in the specification at page 11, line 26 to page 12, line 9, which states:

"Optionally substituted" groups may be substituted or unsubstituted. The substituents of an "optionally substituted" group may include, without limitation, one or more substituents independently selected from the following groups or designated subsets thereof: alkyl, alkenyl, alkynyl, heteroalkyl, haloalkyl, haloalkenyl, haloalkynyl, cycloalkyl, aryl, heteroaryl, arylalkyl, heteroarylalkyl, alkoxy, aryloxy, haloalkoxy, amino, alkylamino, dialkylamino, alkylthio, arylthio, heteroarylthio, oxo, carboxyesters, carboxamido, acyloxy, hydrogen, F, Cl, Br, I, CN, NO₂, NH₂, N₃, NHCH₃, N(CH₃)₂, SH, SCH₃, OH, OCH₃, OCF₃, CH₃, CF₃, C(O)CH₃, CO₂CH₃, CO₂H, C(O)NH₂, OR⁹, SR⁹ and NR¹⁰R¹¹. An optionally substituted group may be unsubstituted (e.g., -CH₂CH₃), fully substituted (e.g., -CF₂CF₃), monosubstituted (e.g., -CH₂CH₂F) or substituted at a level anywhere in-between fully substituted and monosubstituted (e.g., -CH₂CF₃).

Thus, the recitation "optionally substituted" does not imply "that the unnamed substituents is/are open to all possible alternatives" as alleged by the Examiner. As discussed above, claims must be read in view of the specification. See e.g., MPEP § 2106 ("An applicant is entitled to be his or her own lexicographer, and in many instances will provide an explicit definition for certain terms used in the claims. Where an explicit definition is provided by the applicant for a term, that definition will control interpretation of the term as it is used in the claim."); MPEP § 608.01(o) ("The meaning of every term used in any of the claims should be apparent from the descriptive portion of the specification"); MPEP § 2173.05 ("When the specification states the meaning that a term in the claims is intended to have, the claim is examined using that meaning in order to achieve a complete exploration of the applicant's

invention and its relation to the prior art.”). The term “optionally substituted” is expressly defined in the specification. Thus, reciting that definition in the claims is not necessary.

Furthermore, the USPTO recognizes the use of this term in patent claims. A search of the USPTO database for the time period 1976 to present for patents with the recitation “optionally substituted” in the claims yielded 22,359 patents. While applicant realizes that the prosecution history of one patent is not relevant to another, the widespread use of the recitation “optionally substituted” in claims evidences that one of skill in the art understands the meaning of this term.

The Examiner alleges that “for a number of reasons” the definition in the specification allegedly “does not meet the requirements of the statute” or “fails to have adequately defined metes and bounds (35 USC §112, 2nd ¶)” (Office Action at page 7). The Examiner does not provide an explanation of these “number of reasons.” Applicant respectfully requests that the Examiner withdraw the rejection or, in the alternative, more fully articulate the “number of reasons” so that applicant is afforded the opportunity to more fully address the issue.

REJECTION OF CLAIMS 1 and 58 UNDER 35 U.S.C. §112, SECOND PARAGRAPH

Claims 1-7, 9, 11-18, 20, 21, 23-36, 39, 41, 45, 49-51, 56-58, 60-74, 76, 77 and 86-107 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter that applicant regards as the invention because the Examiner alleges that claiming “‘C₁-C₈ heteroalkyl’ and ‘OR⁹’ are directed to substantially overlapping subject matter; i.e., the latter is entirely encompassed by the former.” Applicant respectfully traverses the rejection. According to the MPEP:

[T]he double inclusion of an element by members of a Markush group is not, in itself sufficient basis for objection to or rejection of claims. . . . For example, the Markush group, ‘selected from the group consisting of amino, halogen, nitro, chloro and alkyl’ should be acceptable even though ‘halogen’ is generic to ‘chloro.’”

MPEP, § 2173.05(h). Thus even if OR⁹ were, as the Examiner asserts, “completely encompassed” by the term “C₁-C₈ heteroalkyl,” a rejection on that basis would be improper. Moreover, “OR⁹” is not, in fact, completely encompassed by “C₁-C₈ heteroalkyl.” By way of non-limiting example, R⁹ may be hydrogen. Thus, OR⁹ may be OH, which is not a C₁-C₈ heteroalkyl. Applicants respectfully submit that this rejection is improper, both legally and factually, and should be withdrawn.

**REJECTION OF CLAIMS 87-107 UNDER 35 U.S.C. §112, SECOND
PARAGRAPH**

Claims 87-107 are rejected under 35 U.S.C. § 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter that applicant regards as the invention because the Examiner alleges that the term "modulate" is "indefinite for failing to indicate what specific treatment action(s) or effect(s) is(are) intended."

Without acquiescing to the Examiner's allegation and solely to expedite prosecution, claims 87-107 are cancelled herein without prejudice or disclaimer. Thus, the rejection as applied to claims 87-107 under 35 U.S. C. § 102 is moot.

REJECTION OF CLAIMS 1-7, 12-14, 16-18, 20-26, 32-34, 37, 41-46, 49-53, 58-62, 64-70, 73, 75 and 77 UNDER 35 U.S.C. §102(b)

Claims 1-7, 12-14, 16-18, 20-26, 32-34, 37, 41-46, 49-53, 58-62, 64-70, 73, 75 and 77 are rejected under 35 U.S.C. § 102(b) as anticipated by Kyotani *et al.* because Kyotani *et al.* allegedly discloses compounds that include all the limitations of the claimed subject matter. The Examiner alleges that the instant claims are anticipated by compounds of structure "(1e)" at column 3 in the reference.

This rejection is respectfully traversed.

RELEVANT LAW

Anticipation requires the disclosure in a single prior art reference of each element of the claim under consideration. *In re Spada*, 15 USPQ2d 1655 (Fed. Cir. 1990), *In re Bond*, 15 USPQ 1566 (Fed. Moreover it is incumbent on the Examiner to identify wherein each and every facet of the claimed invention is disclosed in the reference. *Lindemann Maschinen-fabrik GmbH v. American Hoist and Derrick Co.*, 730 F.2d 1452, 221 USPQ 481 (Fed. Cir. 1984). Further, the reference must describe the invention as claimed sufficiently to have placed a person of ordinary skill in the art in possession of the invention. An inherent property has to flow naturally from what is taught in a reference. *In re Oelrich*, 666 F.2d 578, 581, 212 USPQ 323, 326 (CCPA 1981).

THE CLAIMS

Claim 1 is directed to compounds of formula (I), where W is S(O)_m, NH, N{R¹³}, N{C(Y)R¹¹} or N{SO₂R¹¹}, X and Z each independently is O, NH, N{R¹¹}, N{C(Y)R¹¹},

$N\{SO_2R^{12}\}$ or $N\{S(O)R^{12}\}$, and Y is O. Claims 2-31, 37-42, 45, 46, 49-51 and 61 depend from claim 1. Claim 58 is directed to pharmaceutical compositions that includes a pharmaceutically acceptable carrier and a compound of formula (I), where W is $S(O)_n$, NH, $N\{R^{13}\}$, $N\{C(Y)R^{11}\}$ or $N\{SO_2R^{11}\}$, X and Z each independently is O, NH, $N\{R^{11}\}$, $N\{C(Y)R^{11}\}$, $N\{SO_2R^{12}\}$ or $N\{S(O)R^{12}\}$, and Y is O. Claims 59, 60, 62-72 and 75-77 depend from claim 58.

Disclosure of Kyotani *et al.* (US 5,576,324)

Kyotani *et al.* discloses quinolinone derivatives and medicinally acceptable salts thereof that have positive inotropic action, antiarrhythmic action and vasodilating action. Kyotani *et al.* discloses compounds of formula (1e), where the 6 position of the quinolinone core structure contains an oxygen substituent.

Differences between Kyotani *et al.* and the Claimed Subject Matter

The 6 position of the core structure in formula (1e) corresponds to W in formula (I) in instant claims 1 and 58. Formula (1e) of Kyotani *et al.* does not contain $S(O)_n$, NH, $N\{R^{13}\}$, $N\{C(Y)R^{11}\}$ or $N\{SO_2R^{11}\}$ in the 6 position of the quinolinone core structure. Thus, Kyotani *et al.* does not disclose compounds of formula (I), where W is $S(O)_n$, NH, $N\{R^{13}\}$, $N\{C(Y)R^{11}\}$ or $N\{SO_2R^{11}\}$. Absent such a disclosure, Kyotani *et al.* does not disclose every element of the claimed subject matter, and thus does not anticipate claims 1 and 58. Thus, claims 2-31, 37-42, 45, 46, 49-51 and 61, which depend from claim 1, and claims 59, 60, 62-72 and 75-77, which depend from claim 58, are not anticipated by Kyotani *et al.* Reconsideration and withdrawal of the rejection are respectfully requested.

REJECTION OF CLAIMS 1-7, 9, 11-14, 16-18, 20, 25-28, 32-34, 37, 38, 41, 42, 45, 46, 49, 52, 53, 58-62, 64-70 and 76 UNDER 35 U.S.C. §102(b)

Claims 1-7, 9, 11-14, 16-18, 20, 25-28, 32-34, 37, 38, 41, 42, 45, 46, 49, 52, 53, 58-62, 64-70 and 76 are rejected under 35 U.S.C. § 102(b) as anticipated by LaMontagne *et al.* because LaMontagne *et al.* allegedly discloses compounds that include all the limitations of the claimed subject matter. The Examiner alleges that the instant claims are anticipated by structures 4k-4k on page 965, compounds 2d and 2e on page 966, compounds 3f-3g on page 966 and compounds 4h-4k on page 967 of LaMontagne *et al.*.

This rejection is respectfully traversed.

RELEVANT LAW

THE CLAIMS

See related section above.

Disclosure of LaMontagne *et al.*

LaMontagne *et al.* discloses the synthesis and biological activity of 5-alkoxy analogues of 4-methylprimaquine. The compounds disclosed by LaMontagne *et al.* are substituted quinolines.

Differences between LaMontagne *et al.* and the Claimed Subject Matter

Formula (I) of claims 1 and 58 does not encompass quinoline compounds. LaMontagne *et al.* does not disclose compounds of formula (I). Absent such a disclosure, LaMontagne *et al.* does not disclose every element of the claimed subject matter and therefore does not anticipate claims 1 and 58. Claims 2-31, 37-42, 45, 46, 49-51 and 61 depend from claim 1, and claims 59, 60, 62-72 and 75-77 depend from claim 58. Hence, LaMontagne *et al.* does not anticipate any of claims 1-7, 9, 11-14, 16-18, 20, 25-28, 32-34, 37, 38, 41, 42, 45, 46, 49, 52, 53, 58-62, 64-70 and 76. Reconsideration and withdrawal of the rejection are respectfully requested.

REJECTION OF CLAIMS 1-7, 9, 11-14, 16-18, 20, 21, 37, 38, 41-45, 49, 52, 58-68, 70, 75 and 77 UNDER 35 U.S.C. §102(b)

Claims 1-7, 9, 11-14, 16-18, 20, 21, 37, 38, 41-45, 49, 52, 58-68, 70, 75 and 77 are rejected under 35 U.S.C. § 102(b) as anticipated by Debenedetti *et al.* because the reference allegedly discloses compounds that include all the limitations of the claimed subject matter. The Examiner alleges that the instant claims are anticipated by compounds 1 and 3 on page 701 of Debenedetti *et al.* This rejection is respectfully traversed.

RELEVANT LAW

See related section above.

THE CLAIMS

See related section above.

Disclosure of Debenedetti *et al.*

Debenedetti *et al.* discloses three 5,6,7-trioxygenated coumarins that are isolated from the aerial parts of *Pterocaulon virgatum*(L.) DC. and *Pterocaulon purpurascens* Malme. Specifically, Debenedetti *et al.* discloses isopurpurasol (compound 1), its regiosomer (compound 3) and purpuraol (compound 2).

Differences between Debenedetti *et al.* and the Claimed Subject Matter

The three compounds disclosed by Debenedetti *et al.* contain an oxygen substituent at the 6 position of the coumarin core structure, which corresponds to W in instant formula (I). The compounds disclosed by Debenedetti *et al.* do not contain S(O)_n, NH, N{R¹³}.

$N\{C(Y)R^{11}$ or $N\{SO_2R^{11}\}$ in the 6 position of the coumarin core structure. Thus Debenedetti *et al.* does not disclose compounds of formula (I) where W is $S(O)_n$, NH, $N\{R^{13}\}$, $N\{C(Y)R^{11}$ or $N\{SO_2R^{11}\}$. Absent such a disclosure, Debenedetti *et al.* does not disclose every element of the claimed subject matter and thus does not anticipate claim 1 or claim 58. Claims 2-31, 37-42, 45, 46, 49-51 and 61 depend from claim 1, and claims 59, 60, 62-72 and 75-77 depend from claim 58. Because Debenedetti *et al.* does not anticipate claims 1 or 58, Debenedetti *et al.* does not anticipate any of claims 1-7, 9, 11-14, 16-18, 20, 21, 37, 38, 41-45, 49, 52, 58-68, 70, 75 and 77. Reconsideration and removal of the rejection are respectfully requested.

REJECTION OF CLAIMS 1-7, 12-14, 16-18, 20, 21, 23, 24, 37, 41-45, 49, 50, 52, 58-62, 64-68, 70, 73, 75 and 77 UNDER 35 U.S.C. §102(b)

Claims 1-7, 12-14, 16-18, 20, 21, 23, 24, 37, 41-45, 49, 50, 52, 58-62, 64-68, 70, 73, 75 and 77 are rejected under 35 U.S.C. § 102(b) as anticipated by Castillo *et al.* because Castillo *et al.* allegedly discloses compounds and pharmaceutical compositions that include all the limitations of the claimed subject matter. This rejection is respectfully traversed.

RELEVANT LAW

See related section above.

THE CLAIMS

See related section above.

Disclosure of Castillo *et al.*

Castillo *et al.* discloses a method for the synthesis of methylenedioxy coumarins. Castillo *et al.* discloses the synthesis and characterization of six methylenedioxy coumarins, namely compounds 3, 4, 5, 6, 7 and 8. The Examiner alleges that compound 6 falls within the scope of the instant claims and thus anticipates the claimed subject matter.

Differences between Castillo *et al.* and the claimed Subject Matter

Compound 6 of Castillo *et al.* contains an oxygen substituent at the 6 position of the coumarin core structure, which corresponds to W in formula (I). Compound 6 does not contain $S(O)_n$, NH, $N\{R^{13}\}$, $N\{C(Y)R^{11}$ or $N\{SO_2R^{11}\}$ in the 6 position of the coumarin core structure. Therefore, Castillo *et al.* does not disclose compounds of formula (I), where W is $S(O)_n$, NH, $N\{R^{13}\}$, $N\{C(Y)R^{11}$ or $N\{SO_2R^{11}\}$. Absent such a disclosure, Castillo *et al.* does not disclose every element of claims 1 and 58. Claims 2-31, 37-42, 45, 46, 49-51 and 61 depend from claim 1, and claims 59, 60, 62-72 and 75-77 depend from claim 58. Thus, Castillo *et al.* does not anticipate any of claims 1-7, 12-14, 16-18, 20, 21, 23, 24, 37, 41-45,

R^9 is selected from the group of hydrogen, optionally substituted $C_1 - C_8$ alkyl, optionally substituted $C_1 - C_8$ haloalkyl, optionally substituted $C_1 - C_8$ heteroalkyl, optionally substituted aryl, optionally substituted heteroaryl and optionally substituted arylalkyl;

~~wherein the alkyl, haloalkyl, heteroalkyl, aryl, heteroaryl and arylalkyl groups may be optionally substituted;~~

R^{10} is selected from the group of hydrogen, optionally substituted $C_1 - C_8$ alkyl, optionally substituted $C_1 - C_8$ haloalkyl, optionally substituted $C_1 - C_8$ heteroalkyl, optionally substituted aryl, optionally substituted heteroaryl, optionally substituted arylalkyl, CO_2R^{12} , $C(O)R^{12}$, SO_2R^{12} and $S(O)R^{12}$, ~~wherein the alkyl, haloalkyl, heteroalkyl, aryl, heteroaryl and arylalkyl groups may be optionally substituted;~~

R^{11} and R^{12} each independently is selected from the group of hydrogen, optionally substituted $C_1 - C_8$ alkyl, optionally substituted $C_1 - C_8$ haloalkyl, optionally substituted $C_1 - C_8$ heteroalkyl, optionally substituted aryl, optionally substituted heteroaryl and optionally substituted arylalkyl, wherein the alkyl, haloalkyl, heteroalkyl, aryl, heteroaryl and arylalkyl groups may be optionally substituted;

R^{13} is selected from the group of optionally substituted $C_1 - C_8$ alkyl, optionally substituted $C_1 - C_8$ haloalkyl, optionally substituted $C_1 - C_8$ heteroalkyl, optionally substituted $C_2 - C_8$ alkenyl, optionally substituted $C_2 - C_8$ alkynyl, optionally substituted $C_3 - C_8$ cycloalkyl, optionally substituted aryl, optionally substituted heteroaryl, optionally substituted arylalkyl and optionally substituted heteroarylalkyl, ~~wherein the alkyl, haloalkyl, heteroalkyl, alkenyl, alkynyl, cycloalkyl, aryl, heteroaryl, arylalkyl and heteroarylalkyl groups may be optionally substituted;~~

R^{16} is selected from the group of hydrogen, optionally substituted $C_1 - C_8$ alkyl, optionally substituted $C_1 - C_8$ haloalkyl, optionally substituted $C_1 - C_8$ heteroalkyl, COR^{17} , CO_2R^{17} and $CONR^{12}R^{17}$, ~~wherein the alkyl, haloalkyl and heteroalkyl groups may be optionally substituted;~~

R^{17} is selected from the group of hydrogen, optionally substituted $C_1 - C_8$ alkyl, optionally substituted $C_1 - C_8$ haloalkyl and $C_1 - C_8$ heteroalkyl, ~~wherein the alkyl, haloalkyl and heteroalkyl groups may be optionally substituted;~~

R^{18} is selected from the group of hydrogen, F, Br, Cl, I, CN, $C_1 - C_8$ alkyl, optionally substituted $C_1 - C_8$ haloalkyl, ~~$C_1 - C_8$ heteroalkyl~~, OR^{16} , $NR^{16}R^{17}$, SR^{16} , CH_2R^{16} , COR^{17} , CO_2R^{17} , $CONR^{16}R^{17}$, SOR^{17} and SO_2R^{17} , ~~wherein the alkyl, haloalkyl and heteroalkyl groups may be optionally substituted;~~

R^{19} is selected from the group of hydrogen, optionally substituted $C_1 - C_8$ alkyl, optionally substituted $C_1 - C_8$ haloalkyl, optionally substituted $C_1 - C_8$ heteroalkyl, optionally substituted $C_2 - C_8$ alkenyl, optionally substituted $C_2 - C_8$ alkynyl, optionally substituted $C_3 -$

C₈ cycloalkyl, optionally substituted aryl, optionally substituted heteroaryl, optionally substituted arylalkyl and optionally substituted heteroarylalkyl, ~~wherein the alkyl, haloalkyl, heteroalkyl, alkenyl, alkynyl, cycloalkyl, aryl, heteroaryl, arylalkyl and heteroarylalkyl groups may be optionally substituted;~~

m is selected from the group of 0, 1 and 2;

n is selected from the group of 0, 1 and 2;

V is selected from the group of O and S;

W is selected from the group of O, S(O)_n, NH, N{R¹³}, N{C(Y)R¹¹} and N{SO₂R¹¹};

X and Z each independently is selected from the group of O, S(O)_n, NH, N{R¹¹}, N{C(Y)R¹¹}, N{SO₂R¹²} and N{S(O)R¹²}; and

Y is selected from the group of O, S, N{R¹⁹} and N{OR¹⁹};

and pharmaceutically acceptable salts thereof, wherein the compound is a modulator for a member of the androgen receptor family.

2. (currently amended) A compound according to claim 1, wherein R¹ is selected from the group of hydrogen, F, Cl, OR⁹, NR¹⁰R¹¹, S(O)_nR⁹, optionally substituted C₁ - C₄ alkyl, optionally substituted C₁ - C₄ haloalkyl and optionally substituted C₁ - C₄ heteroalkyl, ~~wherein the alkyl, haloalkyl and heteroalkyl groups may be optionally substituted.~~

3. (currently amended) A compound according to claim 2, wherein R¹ is selected from the group of hydrogen, F, Cl, optionally substituted C₁ - C₄ alkyl, optionally substituted C₁ - C₄ haloalkyl and optionally substituted C₁ - C₄ heteroalkyl, ~~wherein the alkyl, haloalkyl and heteroalkyl groups may be optionally substituted.~~

4. (original) A compound according to claim 3, wherein R¹ is selected from the group of hydrogen, F and optionally substituted C₁ - C₄ alkyl.

5. (currently amended) A compound according to claim 1, wherein R² is selected from the group of hydrogen, F, Cl, Br, I, CF₃, CF₂Cl, CF₂H, CFH₂, CF₂OR⁹, CH₂OR⁹, OR⁹, S(O)_nR⁹, optionally substituted C₁ - C₆ alkyl, optionally substituted C₁ - C₆ haloalkyl, optionally substituted C₁ - C₆ heteroalkyl, optionally substituted C₂ - C₆ alkynyl and optionally substituted C₂ - C₆ alkenyl, ~~wherein the alkyl, haloalkyl, heteroalkyl, alkynyl and alkenyl groups may be optionally substituted.~~

6. (currently amended) A compound according to claim 5, wherein R² is selected from the group of hydrogen, F, Cl, CF₃, CF₂Cl, CF₂H, CFH₂, optionally substituted C₁ - C₄

alkyl, optionally substituted C₁ - C₄ haloalkyl and optionally substituted C₁ - C₄ heteroalkyl, ~~wherein the alkyl, haloalkyl and heteroalkyl groups may be optionally substituted.~~

7. (currently amended) A compound according to claim 6, wherein R² is selected from the group of hydrogen, optionally substituted C₁ - C₂ alkyl, optionally substituted C₁ - C₂ haloalkyl and optionally substituted C₁ - C₂ heteroalkyl, ~~wherein the alkyl, haloalkyl and heteroalkyl groups may be optionally substituted.~~

8. (original) A compound according to claim 7, wherein R² is CF₃.

9. (currently amended) A compound according to claim 1, wherein R³ is selected from the group of hydrogen, optionally substituted C₁ - C₆ alkyl, optionally substituted C₁ - C₆ haloalkyl, optionally substituted C₁ - C₆ heteroalkyl, C(Y)OR¹¹ and C(Y)NR¹⁰R¹¹, ~~wherein the alkyl, haloalkyl and heteroalkyl groups may be optionally substituted; or~~

R³ and R⁶ taken together form a three to eight membered saturated or unsaturated carbocyclic ring.

10. (original) A compound according to claim 9, wherein R³ and R⁶ taken together form a four to six membered saturated or unsaturated carbocyclic ring.

11. (currently amended) A compound according to claim 9, wherein R³ is selected from the group of hydrogen, optionally substituted C₁ - C₄ alkyl, optionally substituted C₁ - C₄ haloalkyl and optionally substituted C₁ - C₄ heteroalkyl, ~~wherein the alkyl, haloalkyl and heteroalkyl groups may be optionally substituted.~~

12. (currently amended) A compound according to claim 1, wherein R⁶ is selected from the group of hydrogen, CF₃, CF₂Cl, CF₂H, CFH₂, optionally substituted C₁ - C₆ alkyl, optionally substituted C₁ - C₆ haloalkyl, optionally substituted C₁ - C₆ heteroalkyl, optionally substituted aryl, optionally substituted arylalkyl, optionally substituted heteroaryl, optionally substituted C₂ - C₆ alkynyl and optionally substituted C₂ - C₆ alkenyl, ~~wherein the alkyl, heteroalkyl, haloalkyl, aryl, arylalkyl, heteroaryl, alkynyl and alkenyl groups may be optionally substituted.~~

13. (currently amended) A compound according to claim 12, wherein R⁶ is selected from the group of hydrogen, CF₃, CF₂Cl, CF₂H, CFH₂, optionally substituted C₁ - C₄ alkyl, optionally substituted C₁ - C₄ haloalkyl, optionally substituted C₁ - C₄ heteroalkyl, optionally

substituted C₂ – C₄ alkynyl and optionally substituted C₂ – C₄ alkenyl, ~~wherein the alkyl, heteroalkyl, haloalkyl, alkynyl and alkenyl groups may be optionally substituted.~~

14. (currently amended) A compound according to claim 13, wherein R⁶ is selected from the group of hydrogen, CF₃, CF₂Cl, CF₂H, CFH₂, optionally substituted C₁ – C₄ alkyl, optionally substituted C₁ – C₄ haloalkyl and optionally substituted C₁ – C₄ heteroalkyl, ~~wherein the alkyl, haloalkyl and heteroalkyl groups may be optionally substituted.~~

15. (currently amended) A compound according to claim 12, wherein R⁶ is selected from the group of optionally substituted aryl, optionally substituted arylalkyl and optionally substituted heteroaryl, ~~wherein the aryl, arylalkyl and heteroaryl groups may be optionally substituted.~~

16. (currently amended) A compound according to claim 1, wherein R⁵ is selected from the group of hydrogen, CF₃, CF₂Cl, CF₂H, CFH₂, optionally substituted C₁ – C₆ alkyl, optionally substituted C₁ – C₆ haloalkyl, optionally substituted C₁ – C₆ heteroalkyl, optionally substituted C₂ – C₆ alkynyl, optionally substituted C₂ – C₆ alkenyl, ~~wherein the alkyl, haloalkyl, heteroalkyl, alkynyl and alkenyl groups may be optionally substituted.~~

17. (currently amended) A compound according to claim 16, wherein R⁵ is selected from the group of hydrogen, CF₃, CF₂Cl, CF₂H, CFH₂, optionally substituted C₁ – C₆ alkyl, optionally substituted C₁ – C₆ haloalkyl and optionally substituted C₁ – C₆ heteroalkyl, ~~wherein the alkyl, haloalkyl and heteroalkyl groups may be optionally substituted.~~

18. (currently amended) A compound according to claim 17, wherein R⁵ is selected from the group of hydrogen, CF₃, CF₂Cl, CF₂H, CFH₂, optionally substituted C₁ – C₄ alkyl, optionally substituted C₁ – C₄ haloalkyl and optionally substituted C₁ – C₄ heteroalkyl, ~~wherein the alkyl, haloalkyl and heteroalkyl groups may be optionally substituted.~~

19. (original) A compound according to claim 18, wherein R⁵ is hydrogen or CF₃.

20. (currently amended) A compound according to claim 1, wherein R⁷ is selected from the group of hydrogen, F, Cl, optionally substituted C₁ – C₄ alkyl, optionally substituted C₁ – C₄ haloalkyl and optionally substituted C₁ – C₄ heteroalkyl, ~~wherein the alkyl, haloalkyl and heteroalkyl groups may be optionally substituted.~~

21. (currently amended) A compound according to claim 1, wherein R⁸ is selected from the group of hydrogen, F, Cl, optionally substituted C₁ - C₄ alkyl, optionally substituted C₁ - C₄ haloalkyl and optionally substituted C₁ - C₄ heteroalkyl, ~~wherein the alkyl, haloalkyl and heteroalkyl groups may be optionally substituted.~~

22. (original) A compound according to claim 21, wherein R⁷ and R⁸ are each hydrogen or optionally substituted C₁ - C₂ alkyl.

23. (currently amended) A compound according to claim 1, wherein R⁹ is selected from the group of hydrogen, optionally substituted C₁ - C₆ alkyl, optionally substituted C₁ - C₆ haloalkyl and optionally substituted C₁ - C₆ heteroalkyl, ~~wherein the alkyl, haloalkyl and heteroalkyl groups may be optionally substituted.~~

24. (original) A compound according to claim 23, wherein R⁹ is selected from the group of hydrogen and optionally substituted C₁ - C₄ alkyl.

25. (currently amended) A compound according to claim 1, wherein R¹⁰ is selected from the group of hydrogen, S(O)R¹², SO₂R¹², C(O)R¹², CO₂R¹², optionally substituted C₁ - C₆ alkyl, optionally substituted C₁ - C₆ haloalkyl and optionally substituted C₁ - C₆ heteroalkyl, ~~wherein the alkyl, haloalkyl and heteroalkyl groups may be optionally substituted.~~

26. (original) A compound according to claim 25, wherein R¹⁰ is selected from the group of hydrogen, S(O)R¹², SO₂R¹², C(O)R¹² and CO₂R¹².

27. (currently amended) A compound according to claim 1, wherein R⁴ is selected from the group of hydrogen, optionally substituted C₁ - C₄ alkyl, optionally substituted C₁ - C₄ haloalkyl and optionally substituted C₁ - C₄ heteroalkyl, ~~wherein the alkyl, haloalkyl and heteroalkyl groups may be optionally substituted.~~

28. (original) A compound according to claim 27, wherein R⁴ is selected from the group of hydrogen and optionally substituted C₁ - C₂ alkyl.

29. (currently amended) A compound according to claim 1, wherein R¹³ is selected from the group of CF₃, CF₂Cl, CF₂H, CFH₂, CH₂CF₃, CH₂CF₂Cl, CH₂CCl₂F, optionally substituted C₁ - C₆ alkyl, optionally substituted C₃ - C₆ cycloalkyl, optionally substituted C₁ - C₆ haloalkyl, optionally substituted C₁ - C₆ heteroalkyl, optionally substituted C₂ - C₆ alkenyl, optionally substituted C₂ - C₆ alkynyl, optionally substituted aryl, optionally substituted heteroaryl, optionally substituted arylalkyl and optionally substituted

heteroarylalkyl, ~~wherein the alkyl, cycloalkyl, haloalkyl, heteroalkyl, alkenyl, alkynyl, aryl, heteroaryl, arylalkyl and heteroarylalkyl groups may be optionally substituted; or~~

R^6 and R^{13} taken together form a five to seven membered saturated or unsaturated heterocyclic ring.

30. (currently amended) A compound according to claim 29, wherein R^{13} is selected from the group of CF_3 , CF_2Cl , CF_2H , CFH_2 , CH_2CF_3 , CH_2CF_2Cl , CH_2CCl_2F , optionally substituted $C_1 - C_4$ alkyl, optionally substituted $C_1 - C_4$ haloalkyl, optionally substituted $C_1 - C_4$ heteroalkyl, optionally substituted $C_2 - C_4$ alkenyl and optionally substituted aryl, ~~wherein the alkyl, haloalkyl, heteroalkyl, alkenyl and aryl groups may be optionally substituted; or~~

R^6 and R^{13} taken together form a five to six membered saturated or unsaturated heterocyclic ring.

31. (original) A compound according to claim 30, wherein R^{13} is selected from the group of CF_3 , CF_2Cl , CF_2H , CFH_2 , CH_2CF_3 , CH_2CF_2Cl , CH_2CCl_2F , methyl, ethyl, propyl, isopropyl, isobutyl, cyclopropylmethyl, allyl; or

R^6 and R^{13} taken together form a five membered saturated or unsaturated heterocyclic ring.

32. (currently amended) A compound according to claim 1, wherein R^{18} is selected from the group of hydrogen, F, Cl, OR^{16} , SR^{16} , $NR^{16}R^{17}$, $C_1 - C_4$ alkyl, and optionally substituted $C_1 - C_4$ haloalkyl and ~~$C_1 - C_4$ heteroalkyl, wherein the alkyl, haloalkyl and heteroalkyl groups may be optionally substituted.~~

33. (original) A compound according to claim 32, wherein R^{18} is selected from the group of hydrogen, F, Cl, OR^{16} , SR^{16} and $NR^{16}R^{17}$.

34. (original) A compound according to claim 33, wherein R^{18} is selected from the group of hydrogen, F, Cl and OR^{16} .

35. (currently amended) A compound according to claim 1, wherein R^{19} is selected from the group of hydrogen, optionally substituted $C_1 - C_4$ alkyl, optionally substituted $C_1 - C_4$ haloalkyl and optionally substituted $C_1 - C_4$ heteroalkyl, ~~wherein the alkyl, haloalkyl and heteroalkyl groups may be optionally substituted.~~

36. (original) A compound according to claim 35, wherein R^{19} is selected from the group of hydrogen and optionally substituted $C_1 - C_4$ alkyl.

37. (original) A compound according to claim 1, wherein m is 0 or 1.

38. (original) A compound according to claim 37, wherein m is 1.

39. (original) A compound according to claim 1, wherein W is selected from the group of NH , $N\{R^{13}\}$, $N\{C(Y)R^{11}\}$ and $N\{SO_2R^{11}\}$.

40. (original) A compound according to claim 39, wherein W is NH or $N\{R^{13}\}$.

41. (original) A compound according to claim 1, wherein X is selected from the group of O , S , NH and $N\{R^{11}\}$.

42. (original) A compound according to claim 41, wherein X is O or S .

43. (original) A compound according to claim 1, wherein Y is O or S .

44. (original) A compound according to claim 43, wherein Y is O .

45. (original) A compound according to claim 1, wherein Z is selected from the group of NH , $N\{R^{11}\}$ and O .

46. (original) A compound according to claim 45, wherein Z is NH or $N\{R^{11}\}$.

47. (original) A compound according to claim 1, wherein V is S .

48. (original) A compound according to claim 1, wherein V is O .

49. (currently amended) A compound according to claim 1, wherein:

R^1 is selected from the group of hydrogen, F , Cl , OR^9 , $S(O)_nR^9$, $NR^{10}R^{11}$, optionally substituted $C_1 - C_4$ alkyl, optionally substituted $C_1 - C_4$ haloalkyl and optionally substituted $C_1 - C_4$ heteroalkyl, ~~wherein the alkyl, haloalkyl and heteroalkyl groups may be optionally substituted;~~

R^2 is selected from the group of hydrogen, F , Cl , Br , I , CF_3 , CF_2Cl , CF_2H , CFH_2 , CF_2OR^9 , CH_2OR^9 , OR^9 , $S(O)_nR^9$, optionally substituted $C_1 - C_6$ alkyl, optionally substituted $C_1 - C_6$ haloalkyl, optionally substituted $C_1 - C_6$ heteroalkyl, optionally substituted $C_2 - C_6$ alkynyl and optionally substituted $C_2 - C_6$ alkenyl, ~~wherein the alkyl, haloalkyl, heteroalkyl, alkynyl and alkenyl groups may be optionally substituted;~~

R^3 is selected from the group of hydrogen, optionally substituted $C_1 - C_6$ alkyl, optionally substituted $C_1 - C_6$ haloalkyl, optionally substituted $C_1 - C_6$ heteroalkyl, $C(Y)OR^{11}$ and $C(Y)NR^{10}R^{11}$, ~~wherein the alkyl, haloalkyl and heteroalkyl groups may be optionally substituted;~~ or

R^3 and R^6 taken together form a three to eight membered saturated or unsaturated carbocyclic ring;

R^5 is selected from the group of hydrogen, CF_3 , CF_2Cl , CF_2H , CFH_2 , optionally substituted $C_1 - C_6$ alkyl, optionally substituted $C_1 - C_6$ haloalkyl, optionally substituted $C_1 - C_6$ heteroalkyl, optionally substituted $C_2 - C_6$ alkynyl and optionally substituted $C_2 - C_6$ alkenyl, ~~wherein the alkyl, haloalkyl, heteroalkyl, alkynyl and alkenyl groups may be optionally substituted;~~

R^6 is selected from the group of hydrogen, CF_3 , CF_2Cl , CF_2H , CFH_2 , optionally substituted $C_1 - C_6$ alkyl, optionally substituted $C_1 - C_6$ haloalkyl, optionally substituted $C_1 - C_6$ heteroalkyl, optionally substituted aryl, optionally substituted arylalkyl, optionally substituted heteroaryl, optionally substituted $C_2 - C_6$ alkynyl and optionally substituted $C_2 - C_6$ alkenyl, ~~wherein the alkyl, haloalkyl, heteroalkyl, aryl, arylalkyl, heteroaryl, alkynyl and alkenyl groups may be optionally substituted;~~ or

R^6 and R^{13} taken together form a five to seven membered saturated or unsaturated heterocyclic ring.

50. (currently amended) A compound according to claim 49, wherein:

R^7 is selected from the group of hydrogen, F, Cl, optionally substituted $C_1 - C_4$ alkyl, optionally substituted $C_1 - C_4$ haloalkyl and optionally substituted $C_1 - C_4$ heteroalkyl, ~~wherein the alkyl, haloalkyl and heteroalkyl groups may be optionally substituted;~~

R^8 is selected from the group of hydrogen, F, Cl, optionally substituted $C_1 - C_4$ alkyl, optionally substituted $C_1 - C_4$ haloalkyl and optionally substituted $C_1 - C_4$ heteroalkyl, ~~wherein the alkyl, haloalkyl and heteroalkyl groups may be optionally substituted;~~

R^{13} is selected from the group of CF_3 , CF_2Cl , CF_2H , CFH_2 , CH_2CF_3 , CH_2CF_2Cl , CH_2CCl_2F , optionally substituted $C_1 - C_6$ alkyl, optionally substituted $C_1 - C_6$ haloalkyl, optionally substituted $C_1 - C_6$ heteroalkyl, optionally substituted $C_3 - C_6$ cycloalkyl, optionally substituted $C_2 - C_6$ alkenyl, optionally substituted $C_2 - C_6$ alkynyl, optionally substituted aryl, optionally substituted heteroaryl, optionally substituted arylalkyl and

~~optionally substituted heteroarylalkyl, wherein the alkyl, haloalkyl, heteroalkyl, cycloalkyl, alkenyl, alkynyl, aryl, heteroaryl, arylalkyl, and heteroarylalkyl groups may be optionally substituted; or~~

R^6 and R^{13} taken together form a five to seven membered saturated or unsaturated heterocyclic ring; and

R^{18} is selected from the group of hydrogen, F, Cl, OR^{16} , SR^{16} , $NR^{16}R^{17}$, $C_1 - C_4$ alkyl, and optionally substituted $C_1 - C_4$ haloalkyl and $C_1 - C_4$ heteroalkyl, wherein the alkyl, haloalkyl, heteroalkyl groups may be optionally substituted.

51. (original) A compound according to claim 50, wherein:

m is 0 or 1;

W is selected from the group of NH, $N\{R^{13}\}$, $N\{C(Y)R^{11}\}$ and $N\{SO_2R^{11}\}$;

X is selected from the group of O, S, NH and $N\{R^{11}\}$;

Y is O or S; and

Z is selected from the group of NH, $N\{R^{11}\}$ and O.

52. (original) A compound according to claim 1, wherein said compound is represented by formula (I).

53. (original) A compound according to claim 1, wherein said compound is represented by formula (II).

54. (original) A compound according to claim 1, wherein said compound is represented by formula (III).

55. (original) A compound according to claim 1, wherein said compound is represented by formula (IV).

56. (original) A compound according to claim 1, wherein said compound is selected from the group of:

58. (currently amended) A pharmaceutical composition comprising a
pharmaceutically acceptable carrier and a compound of formula:

(I)

or

(II)

or

(III)

or

(IV)

wherein:

R¹ is selected from the group of hydrogen, F, Cl, Br, I, NO₂, OR⁹, NR¹⁰R¹¹, S(O)_nR⁹, optionally substituted C₁ – C₈ alkyl, optionally substituted C₁ – C₈ haloalkyl, optionally substituted C₁ – C₈ heteroalkyl, optionally substituted C₃ – C₈ cycloalkyl, optionally substituted aryl, optionally substituted arylalkyl, optionally substituted heteroaryl, optionally

substituted C₂ - C₈ alkynyl and optionally substituted C₂ - C₈ alkenyl, ~~wherein the alkyl, haloalkyl, heteroalkyl, cycloalkyl, aryl, arylalkyl, heteroaryl, alkynyl and alkenyl groups may be optionally substituted;~~

R² is selected from the group of hydrogen, F, Cl, Br, I, CF₃, CF₂Cl, CF₂H, CFH₂, CF₂OR⁹, CH₂OR⁹, OR⁹, S(O)_nR⁹, NR¹⁰R¹¹, optionally substituted C₁ - C₈ alkyl, optionally substituted C₁ - C₈ haloalkyl, optionally substituted C₁ - C₈ heteroalkyl, optionally substituted C₃ - C₈ cycloalkyl, optionally substituted aryl, optionally substituted arylalkyl, optionally substituted heteroaryl, optionally substituted C₂ - C₈ alkynyl and optionally substituted C₂ - C₈ alkenyl, ~~wherein the alkyl, haloalkyl, heteroalkyl, cycloalkyl, aryl, arylalkyl, heteroaryl, alkynyl and alkenyl groups may be optionally substituted;~~

R³ and R⁴ each independently is selected from the group of hydrogen, OR⁹, S(O)_nR⁹, NR¹⁰R¹¹, C(Y)OR¹¹, C(Y)NR¹⁰R¹¹, optionally substituted C₁ - C₈ alkyl, optionally substituted C₁ - C₈ haloalkyl, optionally substituted C₁ - C₈ heteroalkyl, optionally substituted C₃ - C₈ cycloalkyl, optionally substituted aryl, optionally substituted arylalkyl, optionally substituted heteroaryl, optionally substituted C₂ - C₈ alkynyl and optionally substituted C₂ - C₈ alkenyl, ~~wherein the alkyl, haloalkyl, heteroalkyl, cycloalkyl, aryl, arylalkyl, heteroaryl, alkynyl and alkenyl groups may be optionally substituted;~~ or

R³ and R⁴ taken together form a three to eight membered saturated or unsaturated carbocyclic or heterocyclic ring; or

R³ and R⁵ taken together form a three to eight membered saturated or unsaturated carbocyclic ring; or

R³ and R⁶ taken together form a three to eight membered saturated or unsaturated carbocyclic ring; or

R³ and R¹³ taken together form a three to eight membered saturated or unsaturated heterocyclic ring;

R⁵ and R⁶ each independently are selected from the group of hydrogen, CF₃, CF₂Cl, CF₂H, CFH₂, optionally substituted C₁ - C₈ alkyl, optionally substituted C₁ - C₈ haloalkyl, optionally substituted C₁ - C₈ heteroalkyl, optionally substituted C₃ - C₈ cycloalkyl, optionally substituted aryl, optionally substituted arylalkyl, optionally substituted heteroaryl, optionally substituted C₂ - C₈ alkynyl and optionally substituted C₂ - C₈ alkenyl, ~~wherein the~~

~~alkyl, haloalkyl, heteroalkyl, cycloalkyl, aryl, arylalkyl, heteroaryl, alkynyl and alkenyl groups may be optionally substituted; or~~

R^5 and R^6 taken together form a three to eight membered saturated or unsaturated carbocyclic ring; or

R^5 and R^{13} taken together form a three to eight membered saturated or unsaturated heterocyclic ring; or

R^6 and R^{13} taken together form a three to eight membered saturated or unsaturated heterocyclic ring;

R^7 is selected from the group of hydrogen, F, Cl, Br, I, optionally substituted $C_1 - C_8$ alkyl, optionally substituted $C_1 - C_8$ haloalkyl, optionally substituted $C_1 - C_8$ optionally substituted heteroalkyl, optionally substituted aryl, optionally substituted heteroaryl, OR^9 , $S(O)_nR^9$, $NR^{10}R^{11}$, $C(Y)OR^{11}$ and $C(Y)NR^{10}R^{11}$, ~~wherein the alkyl, haloalkyl, heteroalkyl, aryl and heteroaryl groups may be optionally substituted;~~

R^8 is selected from the group of hydrogen, F, Cl, Br, I, optionally substituted $C_1 - C_8$ alkyl, optionally substituted $C_1 - C_8$ haloalkyl, optionally substituted $C_1 - C_8$ heteroalkyl, optionally substituted aryl, optionally substituted heteroaryl, OR^9 , $S(O)_nR^9$, $NR^{10}R^{11}$, $C(Y)OR^{11}$ and $C(Y)NR^{10}R^{11}$, ~~wherein the alkyl, haloalkyl, heteroalkyl, aryl and heteroaryl groups may be optionally substituted;~~

R^9 is selected from the group of hydrogen, optionally substituted $C_1 - C_8$ alkyl, optionally substituted $C_1 - C_8$ haloalkyl, optionally substituted $C_1 - C_8$ heteroalkyl, optionally substituted aryl, optionally substituted heteroaryl and optionally substituted arylalkyl; ~~wherein the alkyl, haloalkyl, heteroalkyl, aryl, heteroaryl and arylalkyl groups may be optionally substituted;~~

R^{10} is selected from the group of hydrogen, optionally substituted $C_1 - C_8$ alkyl, optionally substituted $C_1 - C_8$ haloalkyl, optionally substituted $C_1 - C_8$ heteroalkyl, optionally substituted aryl, optionally substituted heteroaryl, optionally substituted arylalkyl, CO_2R^{12} , $C(O)R^{12}$, SO_2R^{12} and $S(O)R^{12}$, ~~wherein the alkyl, haloalkyl, heteroalkyl, aryl, heteroaryl and arylalkyl groups may be optionally substituted;~~

R^{11} and R^{12} each independently is selected from the group of hydrogen, optionally substituted $C_1 - C_8$ alkyl, optionally substituted $C_1 - C_8$ haloalkyl, optionally substituted $C_1 - C_8$ heteroalkyl, optionally substituted aryl, optionally substituted heteroaryl and optionally substituted

substituted arylalkyl, wherein the alkyl, haloalkyl, heteroalkyl, aryl, heteroaryl and arylalkyl groups may be optionally substituted;

R^{13} is selected from the group of optionally substituted $C_1 - C_8$ alkyl, optionally substituted $C_1 - C_8$ haloalkyl, optionally substituted $C_1 - C_8$ heteroalkyl, optionally substituted $C_2 - C_8$ alkenyl, optionally substituted $C_2 - C_8$ alkynyl, optionally substituted $C_3 - C_8$ cycloalkyl, optionally substituted aryl, optionally substituted heteroaryl, optionally substituted arylalkyl and optionally substituted heteroarylalkyl, wherein the alkyl, haloalkyl, heteroalkyl, alkenyl, alkynyl, cycloalkyl, aryl, heteroaryl, arylalkyl and heteroarylalkyl groups may be optionally substituted;

R^{16} is selected from the group of hydrogen, optionally substituted $C_1 - C_8$ alkyl, optionally substituted $C_1 - C_8$ haloalkyl, optionally substituted $C_1 - C_8$ heteroalkyl, COR^{17} , CO_2R^{17} and $CONR^{12}R^{17}$, wherein the alkyl, haloalkyl and heteroalkyl groups may be optionally substituted;

R^{17} is selected from the group of hydrogen, optionally substituted $C_1 - C_8$ alkyl, optionally substituted $C_1 - C_8$ haloalkyl and optionally substituted $C_1 - C_8$ heteroalkyl, wherein the alkyl, haloalkyl and heteroalkyl groups may be optionally substituted;

R^{18} is selected from the group of hydrogen, F, Br, Cl, I, CN, $C_1 - C_8$ alkyl, optionally substituted $C_1 - C_8$ haloalkyl, $C_1 - C_8$ heteroalkyl, OR^{16} , $NR^{16}R^{17}$, SR^{16} , CH_2R^{16} , COR^{17} , CO_2R^{17} , $CONR^{16}R^{17}$, SOR^{17} and SO_2R^{17} , wherein the alkyl, haloalkyl and heteroalkyl groups may be optionally substituted;

R^{19} is selected from the group of hydrogen, optionally substituted $C_1 - C_8$ alkyl, optionally substituted $C_1 - C_8$ haloalkyl, optionally substituted $C_1 - C_8$ heteroalkyl, optionally substituted $C_2 - C_8$ alkenyl, optionally substituted $C_2 - C_8$ alkynyl, optionally substituted $C_3 - C_8$ cycloalkyl, optionally substituted aryl, optionally substituted heteroaryl, optionally substituted arylalkyl and optionally substituted heteroarylalkyl, wherein the alkyl, haloalkyl, heteroalkyl, alkenyl, alkynyl, cycloalkyl, aryl, heteroaryl, arylalkyl and heteroarylalkyl groups may be optionally substituted;

m is selected from the group of 0, 1 and 2;

n is selected from the group of 0, 1 and 2;

V is selected from the group of O and S;

W is selected from the group of O, S(O)_n, NH, N{R¹³}, N{C(Y)R¹¹} and N{SO₂R¹¹};

X and Z each independently is selected from the group of O, S(O)_n, NH, N{R¹¹}, N{C(Y)R¹¹}, N{SO₂R¹²} and N{S(O)R¹²}; and

Y is selected from the group of O, S, N{R¹⁹} and N{OR¹⁹};

and pharmaceutically acceptable salts thereof.

59. (original) A pharmaceutical composition according to claim 58, wherein said composition is suitable for enteral, parenteral, suppository or topical administration.

60. (currently amended) A pharmaceutical composition according to claim 58, wherein R¹ is selected from the group of hydrogen, F, Cl, OR⁹, NR¹⁰R¹¹, S(O)_nR⁹, optionally substituted C₁ - C₄ alkyl, optionally substituted C₁ - C₄ haloalkyl and optionally substituted C₁ - C₄ heteroalkyl, ~~wherein the alkyl, haloalkyl and heteroalkyl groups may be optionally substituted.~~

61. (currently amended) A pharmaceutical composition comprising a compound according to claim 1, wherein R² is selected from the group of hydrogen, F, Cl, Br, I, CF₃, CF₂Cl, CF₂H, CFH₂, CF₂OR⁹, CH₂OR⁹, OR⁹, S(O)_nR⁹, optionally substituted C₁ - C₆ alkyl, optionally substituted C₁ - C₆ haloalkyl, optionally substituted C₁ - C₆ heteroalkyl, optionally substituted C₂ - C₆ alkynyl and optionally substituted C₂ - C₆ alkenyl, ~~wherein the alkyl, haloalkyl, heteroalkyl, alkynyl and alkenyl groups may be optionally substituted.~~

62. (currently amended) A pharmaceutical composition according to claim 59, wherein

R¹ is selected from the group of hydrogen, F and optionally substituted C₁ - C₄ alkyl; and

R² is selected from the group of hydrogen, optionally substituted C₁ - C₂ alkyl, optionally substituted C₁ - C₂ haloalkyl and optionally substituted C₁ - C₂ heteroalkyl; ~~wherein the alkyl, haloalkyl and heteroalkyl groups may be optionally substituted.~~

63. (currently amended) A pharmaceutical composition according to claim 58, wherein R³ is selected from the group of hydrogen, optionally substituted C₁ - C₆ alkyl, optionally substituted C₁ - C₆ haloalkyl, optionally substituted C₁ - C₆ heteroalkyl, C(Y)OR¹¹ and C(Y)NR¹⁰R¹¹; ~~wherein the alkyl, haloalkyl and heteroalkyl groups may be optionally substituted; or~~

R^3 and R^6 taken together form a three to eight membered saturated or unsaturated carbocyclic ring.

64. (currently amended) A pharmaceutical composition according to claim 58, wherein R^6 is selected from the group of hydrogen, CF_3 , CF_2Cl , CF_2H , CFH_2 , optionally substituted $C_1 - C_6$ alkyl, optionally substituted $C_1 - C_6$ haloalkyl, optionally substituted $C_1 - C_6$ heteroalkyl, optionally substituted aryl, optionally substituted arylalkyl, optionally substituted heteroaryl, optionally substituted $C_2 - C_6$ alkynyl and optionally substituted $C_2 - C_6$ alkenyl, ~~wherein the alkyl, heteroalkyl, haloalkyl, aryl, arylalkyl, heteroaryl, alkynyl and alkenyl groups may be optionally substituted.~~

65. (currently amended) A pharmaceutical composition according to claim 64, wherein R^6 is selected from the group of hydrogen, CF_3 , CF_2Cl , CF_2H , CFH_2 , optionally substituted $C_1 - C_4$ alkyl, optionally substituted $C_1 - C_4$ haloalkyl, optionally substituted $C_1 - C_4$ heteroalkyl, optionally substituted $C_2 - C_4$ alkynyl and optionally substituted $C_2 - C_4$ alkenyl, ~~wherein the alkyl, heteroalkyl, haloalkyl, alkynyl and alkenyl groups may be optionally substituted.~~

66. (currently amended) A pharmaceutical composition according to claim 58, wherein R^5 is selected from the group of hydrogen, CF_3 , CF_2Cl , CF_2H , CFH_2 , optionally substituted $C_1 - C_6$ alkyl, optionally substituted $C_1 - C_6$ haloalkyl, optionally substituted $C_1 - C_6$ heteroalkyl, optionally substituted $C_2 - C_6$ alkynyl and optionally substituted $C_2 - C_6$ alkenyl, ~~wherein the alkyl, haloalkyl, heteroalkyl, alkynyl and alkenyl groups may be optionally substituted.~~

67. (currently amended) A pharmaceutical composition according to claim 66, wherein R^5 is selected from the group of hydrogen, CF_3 , CF_2Cl , CF_2H , CFH_2 , optionally substituted $C_1 - C_4$ alkyl, optionally substituted $C_1 - C_4$ haloalkyl and optionally substituted $C_1 - C_4$ heteroalkyl, ~~wherein the alkyl, haloalkyl and heteroalkyl groups may be optionally substituted.~~

68. (currently amended) A pharmaceutical composition according to claim 58, wherein R^7 and R^8 each independently is selected from the group of hydrogen, F, Cl, optionally substituted $C_1 - C_4$ alkyl, optionally substituted $C_1 - C_4$ haloalkyl and optionally substituted $C_1 - C_4$ heteroalkyl, ~~wherein the alkyl, haloalkyl and heteroalkyl groups may be optionally substituted.~~

69. (currently amended) A pharmaceutical composition according to claim 58, wherein

R^9 is selected from the group of hydrogen, optionally substituted $C_1 - C_6$ alkyl, optionally substituted $C_1 - C_6$ haloalkyl, and optionally substituted $C_1 - C_6$ heteroalkyl, ~~wherein the alkyl, haloalkyl and heteroalkyl groups may be optionally substituted, and~~

R^{10} is selected from the group of hydrogen, $S(O)R^{12}$, SO_2R^{12} , $C(O)R^{12}$, CO_2R^{12} , optionally substituted $C_1 - C_6$ alkyl, optionally substituted $C_1 - C_6$ haloalkyl and optionally substituted $C_1 - C_6$ heteroalkyl, ~~wherein the alkyl, haloalkyl and heteroalkyl groups may be optionally substituted.~~

70. (currently amended) A pharmaceutical composition according to claim 58, wherein R^4 is selected from the group of hydrogen, optionally substituted $C_1 - C_4$ alkyl, optionally substituted $C_1 - C_4$ haloalkyl and optionally substituted $C_1 - C_4$ heteroalkyl, ~~wherein the alkyl, haloalkyl and heteroalkyl groups may be optionally substituted.~~

71. (currently amended) A pharmaceutical composition according to claim 58, wherein R^{13} is selected from the group of CF_3 , CF_2Cl , CF_2H , CFH_2 , CH_2CF_3 , CH_2CF_2Cl , CH_2CCl_2F , optionally substituted $C_1 - C_6$ alkyl, optionally substituted $C_1 - C_6$ haloalkyl, optionally substituted $C_1 - C_6$ heteroalkyl, optionally substituted $C_2 - C_6$ alkenyl, optionally substituted $C_2 - C_6$ alkynyl, optionally substituted $C_3 - C_6$ cycloalkyl, optionally substituted aryl, optionally substituted heteroaryl, optionally substituted arylalkyl and optionally substituted heteroarylalkyl, ~~wherein the alkyl, haloalkyl, heteroalkyl, alkenyl, alkynyl, cycloalkyl, aryl, heteroaryl, arylalkyl and heteroarylalkyl groups may be optionally substituted; or~~

R^6 and R^{13} taken together form a five to seven membered saturated or unsaturated heterocyclic ring.

72. (currently amended) A pharmaceutical composition according to claim 71, wherein R^{13} is selected from the group of CF_3 , CF_2Cl , CF_2H , CFH_2 , CH_2CF_3 , CH_2CF_2Cl , CH_2CCl_2F , methyl, ethyl, propyl, isopropyl, isobutyl, cyclopropylmethyl, and allyl; or

R^6 and R^{13} taken together form a five membered saturated or unsaturated heterocyclic ring.

73. (currently amended) A pharmaceutical composition according to claim 58, wherein R^{18} is selected from the group of hydrogen, F, Cl, OR^{16} , SR^{16} , $NR^{16}R^{17}$, $C_1 - C_4$

alkyl, and optionally substituted C₁ - C₄ haloalkyl and C₁ - C₄ heteroalkyl, wherein the alkyl, haloalkyl and heteroalkyl groups may be optionally substituted.

74. (currently amended) A pharmaceutical composition according to claim 58, wherein R¹⁹ is selected from the group of hydrogen, optionally substituted C₁ - C₄ alkyl, optionally substituted C₁ - C₄ haloalkyl and optionally substituted C₁ - C₄ heteroalkyl, wherein the alkyl, haloalkyl and heteroalkyl groups may be optionally substituted.

75. (original) A pharmaceutical composition according to claim 58, wherein m is 0 or 1.

76. (original) A pharmaceutical composition according to claim 58, wherein W is selected from the group of NH, N{R¹³}, N{C(Y)R¹¹} and N{SO₂R¹¹}; and X is selected from the group of O, S, NH and N{R¹¹}.

77. (original) A pharmaceutical composition according to claim 58, wherein Y is O or S; and

Z is selected from the group of NH, N{R¹¹} and O.

78. (canceled)

79. (canceled)

80. (currently amended) A method of ~~of~~ for treating an individual having a condition mediated by an androgen receptor comprising administering to said individual a pharmaceutically effective amount of a compound according to any one of claims 1, 56, or 57.

81. (currently amended) A The method according to claim 80, wherein said compound is represented by formula (I).

82. (currently amended) A The method according to claim 80, wherein said compound is represented by formula (II).

83. (currently amended) A The method according to claim 80, wherein said compound is represented by formula (III).

84. (currently amended) A The method according to claim 80, wherein said compound is represented by formula (IV).

85. (currently amended) A The method according to claim 80, wherein said condition is selected from the group of acne, male-pattern baldness, sexual dysfunction,

impotence, wasting diseases, hirsutism, hypogonadism, prostatic hyperplasia, osteoporosis, cancer cachexia, and hormone-dependent cancers.

86. (currently amended) A The method according to claim 80, wherein said condition is alleviated with a therapy selected from the group of male hormone replacement therapy, female androgen replacement therapy and stimulation of hematopoiesis.

87. (currently amended) A method ~~of~~ for modulating an androgen receptor in an individual comprising administering to said individual an androgen receptor modulating effective amount of a compound according to any one of claims 1, 56, or 57.

88. (currently amended) A The method according to claim 87, wherein said individual has a condition mediated by an androgen receptor.

89. (original) A method according to claim 87, wherein said condition is selected from the group of acne, male-pattern baldness, sexual dysfunction, impotence, wasting diseases, hirsutism, hypogonadism, prostatic hyperplasia, osteoporosis, cancer cachexia, hormone-dependent cancers and a process mediated by an anabolic agent.

90. (currently amended) A The method according to claim 87, wherein said condition is alleviated with a therapy selected from the group of male hormone replacement therapy, female androgen replacement therapy and stimulation of hematopoiesis.

91. (currently amended) A The method according to claim 87, wherein said modulation is activation.

92. (currently amended) A The method according to claim 91, wherein said individual has a condition mediated by an androgen receptor.

93. (currently amended) A The method according to claim 92, wherein said condition is selected from the group of acne, male-pattern baldness, sexual dysfunction, impotence, wasting diseases, hirsutism, hypogonadism, prostatic hyperplasia, osteoporosis, cancer cachexia, hormone-dependent cancers and a process mediated by an anabolic agent.

94. (currently amended) A The method according to claim 92, wherein said condition is alleviated with a therapy selected from the group of male hormone replacement therapy, female androgen replacement therapy and stimulation of hematopoiesis.

95. (currently amended) A The method according to claim 91, wherein said compound provides 50% maximal activation of AR at a drug concentration of less than 100 nM.

96. (currently amended) A The method according to claim 91, wherein said compound provides 50% maximal activation of AR at a drug concentration of less than 50 nM.

97. (currently amended) A The method according to claim 91, wherein said compound provides 50% maximal activation of AR at a drug concentration of less than 20 nM.

98. (currently amended) A The method according to claim 91, wherein said compound provides 50% maximal activation of AR at a drug concentration of less than 10 nM.

99. (currently amended) A The method according to claim 87, wherein said modulation is inhibition.

100. (currently amended) A The method according to claim 99, wherein said individual has a condition mediated by an androgen receptor.

101. (currently amended) A The method according to claim 100, wherein said condition is selected from the group of acne, male-pattern baldness, sexual dysfunction, impotence, wasting diseases, hirsutism, hypogonadism, prostatic hyperplasia, osteoporosis, cancer cachexia, hormone-dependent cancers and a process mediated by an anabolic agent.

~~101~~102. (currently amended) A The method according to claim 100, wherein said condition is alleviated with a therapy selected from the group of male hormone replacement therapy, female androgen replacement therapy and stimulation of hematopoiesis.

103. (currently amended) A The method according to claim 99, wherein said compound provides 50% maximal inhibition of AR at a drug concentration of less than 100 nM.

104. (currently amended) A The method according to claim 99, wherein said compound provides 50% maximal inhibition of AR at a drug concentration of less than 50 nM.

105. (currently amended) The A method according to claim 99, wherein said compound provides 50% maximal inhibition of AR at a drug concentration of less than 20 nM.

106. (currently amended) A The method according to claim 99, wherein said compound provides 50% maximal inhibition of AR at a drug concentration of less than 10 nM.

107. (currently amended) A method of for treating cancer, comprising administering to a patient in need thereof a pharmaceutically effective amount of a compound according to any one of claims 1, 56 or 57.

REMARKS

This Amendment and Response is submitted in response to the Office Action mailed July 29, 2004 (Office Action). A supplemental Information Disclosure statement (IDS) accompanies this response. A check for \$1200 for the fee for a three-month extension of time (\$1020) and for the fee for filling the supplemental IDS (\$180) accompanies this response. Any fees that may be due in connection with the filing of this paper or with this application may be charged to Deposit Account No. 06-1050. If a Petition for Extension of Time is needed, this paper is to be considered such Petition.

Claims 1-77 and 80-107 are pending. Claims 78 and 79 are cancelled herein without prejudice or disclaimer. Claims 1-3, 5-7, 9, 11-18, 20-21, 23, 25, 27, 29-30, 32, 35, 49-50, 58, 60-74, 80-88, and 90-107 are amended herein clarity. Support for amendments is found throughout the specification and, in particular, in the respective claims as originally filed. Claim 1 is amended to include the recitation—a modulator for a member of the androgen receptor family—, basis for which is found throughout the specification (for example, see page 45, lines 19-20). Claims 1, 32, and 50 have also been amended to remove certain substituents from R¹⁸. Support these amended claims is found throughout the specification, for example at page 16, lines 7-10 and page 26 and in the claims as originally filed. Therefore, no new matter has been added by reason of these amendments.

Informalities

A. Incorporation By Reference

The Examiner objects to incorporation by reference of certain material in the specification. Office Action at page 2. Specifically, the Examiner alleges that references at page 110, line 22 and at page 111, lines 25-26 describing the “co-transfection assay” constitute essential material. This rejection is respectfully traversed.

Incorporation by reference of “essential material” and “nonessential material” is discussed in the MPEP at MPEP § 608.01(p)(I). For example, MPEP § 608.01(p)(I)(A) states:

“Essential material” is defined as that which is “necessary to (1) describe the claimed invention, (2) provide an enabling disclosure of the claimed invention, or (3) describe the best mode (35 U.S.C. 112)” ...

Nonessential subject matter is subject matter referred to for purposes of indicating the background of the invention or illustrating the state of the art.

MPEP § 608.01(p)(I) also states that

Nonessential subject matter may be incorporated by reference to (1) patents or applications published by the United States or foreign countries or regional patent offices, (2) prior filed, commonly owned U.S. applications, or (3) non-patent publications....

The references objected to by the Examiner are Evans *et al.* on page 110, line 22, US Pat. Nos. 4,981,784 and 5,071,773 to Evans *et al.* on page 110, lines 25-26 and Berger *et al.* on page 111, lines 8-9. These references describe a co-transfection assay that mimics an *in vivo* system in the laboratory. One of skill in the art will recognize that the assay described in the references can be used to in assessing certain compounds, but is not subject matter claimed in the application.

The references illustrate the state of the art at the time of filing the original application with respect to assays available for assessing *in vivo* pharmacology of various compounds, including the claimed subject matter. For example, Evans *et al.* (U.S. Pat. No. 5,071,773) teaches that its bioassays are useful for evaluating whether compounds are functional ligands for receptor proteins (see claim 2 and Abstract). The ability of a compound or composition to modulate the transcriptional ability of intracellular receptors including RXRs may be measured by any of the assays known to those of skill in the art, including but not limited to the co-transfection (cis-trans) assays. Such assays are described in, e.g., U.S. Pat. Nos. 4,981,784, 5,071,773, 5,298,429, 5,506,102, as well as in WO89/05355, WO91/06677, WO92/05447, WO93/11235, WO93/23431, WO94/23068, WO95/18380 and CA 2,034,220. Heyman *et al.* (Cell, 68:397-406 (1992)) also teaches such assays. Thus, because the references cited by the Examiner as allegedly being incorrectly incorporated by reference illustrate the state of the art, the references are nonessential material, and are properly incorporated by reference under MPEP § 608.01(p)(I).

Even without the incorporated references, the application describes the assay with sufficient detail to allow one of skill in the art to practice the assay. The Examiner's attention is directed to the *Biological Examples* section of the application on page 110, line 20 through page 114, line 5. For example, Example B of the *Biological Examples* section, page 112, line through page 114, line, entitled *Co-transfection assay*, provides a detailed description of the assay. The references clearly illustrate that one of skill in the art could use such assays to assess the claimed compounds.

The Examiner cites to *In re Hawkins* to support the objection that the above-noted references are improperly incorporated by reference in the application. This is inapt. In *In re Hawkins*, the incorporated material is deemed essential subject matter. The incorporated material described how to make starting materials, which the Board found were necessary to make the claimed compounds. See *In re Hawkins*, 179 U.S.P.Q. 157, 165. As discussed above, the references illustrate the state of the art at the time of filing the application. Hence,

the references are nonessential material and are properly incorporated by reference.

Applicant respectfully requests that the objection be withdrawn.

B. Typographical Errors

The Examiner notes that a typographical error appears on page 83 of the specification. Applicant has corrected the error by the amendment of the specification herein.

The Examiner notes that claim 102 was incorrectly numbered "101" and indicates that the second claim numbered "101" has been renumbered as "102" under 37 C.F.R. § 1.126. Applicant has corrected the error and will use the correct designation in all subsequent submissions.

THE REJECTION OF CLAIMS 1-55 AND 58-107 UNDER 35 U.S.C. § 112, FIRST PARAGRAPH

Claims 1-55 and 58-107 were rejected under 35 U.S.C. § 112, first paragraph, as allegedly being broader than the enabling disclosure because it allegedly would require undue experimentation to make and use all of the compounds within the scope of the claims. The Examiner relies on the factors set forth in *In re Wands* to reach this conclusion. This rejection is respectfully traversed.

RELEVANT LAW

The test of enablement is whether one skilled in the art can make and use what is claimed based upon the disclosure in the application and information known to those of skill in the art without undue experimentation. *United States v. Telectronics, Inc.*, 8 USPQ2d 1217 (Fed. Cir. 1988). A certain amount of experimentation is permissible as long as it is not undue. A patent application need not teach, and preferably omits, what is well known in the art. *Spectra-Physics, Inc. v. Coherent, Inc.*, 3 USPQ2d 1737 (Fed. Cir. 1987). Indeed, "not everything necessary to practice the invention need be disclosed. In fact, what is well-known is best omitted." *In re Buchner*, 929 F.2d 660, 661, 18 U.S.P.Q.2d 1331, 1332. Showing every combination of substituents is unnecessary.

A considerable amount of experimentation is permissible, particularly if it is routine experimentation. The amount of experimentation that is permissible depends upon a number of factors, which include: the quantity of experimentation necessary, the amount of direction or guidance presented; the presence or absence of working examples, the nature of the invention, the state of the prior art, the relative skill of those in the art, the predictability of the art, and the breadth of the claims. See, *Ex parte Forman*, 230 USPQ 546 (Bd. Pat. App. & Int'f 1986); see also *In re Wands*, 8 USPQ2d 1400 (Fed. Cir. 1988).

ANALYSIS

Applying the above-noted factors to the instant facts reveals that the amount of experimentation is not undue.

1. The scope of the claims.

Claim 1 is directed to a compound having the formula of I, II, III or IV, and claims 2-57 ultimately depend from claim 1 and are directed to various embodiments thereof. Claim 58 is directed to a pharmaceutical composition including a pharmaceutically acceptable carrier and a compound of formula I, II, III or IV, and claims 59-77 ultimately depend from claim 58 and are directed to various embodiments thereof. Claim 80 is directed to a method of treating an individual having a condition mediated by an androgen receptor that includes administering to the individual a pharmaceutically effective amount of a compound of any one of claims 1, 56, or 57. Claims 81-86 depend from claim 80 and are directed to various embodiments thereof. Claim 87 is directed to a method of modulating an androgen receptor in an individual that includes administering to the individual an androgen receptor modulating effective amount of a compound of any one of claims 1, 56, or 57. Claims 88-106 ultimately depend from claim 87 and are directed to various embodiments thereof. Claim 107 is directed to a method of treating cancer that includes administering to a patient in need thereof a pharmaceutically effective amount of a compound of any one of claims 1, 56 or 57.

2. Level of skill in the art

As the Examiner noted, the skill in the art of chemical synthesis is high. That skill, together with the instant specification, including cited and incorporated references, allow the skilled artisan to make any and all of the claimed compounds. The Examiner went on to note that "the level of skill in the medicinal arts is moderate because it is unclear which if any of the compounds disclosed herein are active against one or more specific disease conditions." Office Action at page 5. Applicant respectfully disagrees. The level of skill in the medical arts is high. This is evidenced by the art in this area, which is authored primarily by those with Ph.D. and M.D. degrees and is intended for an audience of similarly highly skilled individuals, primarily in the fields of biochemical, pharmaceutical, or medical arts. The numerous articles and patents made of record in this application, authored and reviewed by those known in the art, address a highly skilled audience, and further evidence the high level of skill in this art. Therefore, the amount of disclosure required to meet the enablement requirement is minimal.

3. The amount of direction or guidance presented and the presence or absence of working examples.

The specification provides a general description of non-steroidal compounds that are high-affinity, high-specificity agonists, partial agonists (i.e., partial activators and/or tissue-specific activators) and antagonists for androgen receptors (AR). The claimed subject matter is directed to androgen receptor modulator compounds, pharmaceutical compositions containing such compounds as well as methods of using such compounds and pharmaceutical compositions for modulating processes mediated by steroid receptors. The application discloses methods of making such compounds and pharmaceutical compositions, as well as intermediates used in their synthesis. The specification describes seven generic synthesis schemes (for example, see page 33, 35, 37, 38, 39, 41 and 42). One of skill in the art can readily follow these schemes or known variations of such schemes with any of a vast number of commonly available starting materials to arrive at the claimed subject matter. The application names over 150 exemplary AR modulator compounds (for example, see page 29 through 32 and claims 56 and 57).

The specification also provides over 50 working examples. Hence the specification provides a variety of examples of compounds that fall within the scope of the claims evidencing that the claimed compounds function as claimed. The specification also provides two screening assays. As discussed above, various screening assays for assessing the ability of a compound or composition to modulate the transcriptional ability of intracellular receptors are known to those of skill in the art, such as those described in U.S. Pat. Nos. 4,981,784, 5,071,773, 5,298,429, and 5,506,102 and in WO89/05355, WO91/06677, WO92/05447, WO93/11235, WO93/23431, WO94/23068, WO95/18380 and CA 2,034,220. The requirements of 35 U.S.C. §112, first paragraph, do not require a specific example of everything within the scope of the claims. *In re Anderson*, 176 USPQ 331, 333 (CCPA 1973) :

...we do not regard section 112, first paragraph, as requiring a specific example of everything within the scope of a broad claim . . . What the Patent Office is here apparently attempting is to limit all claims to the specific examples, not withstanding the disclosure of a broader invention. This it may not do.

In re Grimme, Keil and Schmitz, 124 USPQ 449, 502 (CCPA 1960) :

It is manifestly impracticable for an applicant who discloses a generic invention to give an example of every species falling within it, or even to name every such species. It is sufficient if the disclosure teaches those skilled in the art what the invention is and how to practice it.

Hence there is no requirement for the applicant to exemplify or even provide an example of everything within the scope of the claims. The Patent Office cannot "limit all claims to the specific examples, notwithstanding the disclosure of a broader invention."

4. Predictability of the art.

The art of chemical synthesis is predictable and is dictated by recognized chemical reactions and constraints. The medical arts are also predictable, in that various assays and models that mimic an *in vivo* system in the laboratory were available and known to the skilled artisan at the time of filing of the application. For example, see U.S. Pat. No. 5,071,773 to Evans *et al.* (1991), which teaches a bioassay for evaluating whether compounds are functional ligands for receptor proteins. Such assays are routine in the medical arts. Thus, it is not necessary that one skilled in the art be able to predict which compound will be most active for a particular medical application. The specification, in view of the skill in the art, describes how to make and administer, and if necessary test, any claimed compound. As discussed above, the level of knowledge and skill in the preparation, isolation, manipulation and compounds was high as of the filing date of the instant application. Therefore, in view of the teachings of the specification, in combination with what was known at the time the original application was filed, applicant respectfully submits that the claimed compounds can be prepared predictably using any methods that are known to those skilled in this art. Further, formulating such compounds into a pharmaceutical composition and administration of such compositions to a subject is well known in the medical arts. Thus, preparation and administration of pharmaceutical compounds is also predictable.

5. The amount of experimentation required.

There is nothing of record to suggest that production or use of any of the claimed compounds or compositions would require development of new procedures or excessive experimentation. Organic synthesis methods have been used for decades. As discussed above, bioassays for evaluating whether compounds are functional ligands for receptor proteins were known in the art since at least 1991. Such assays are routine in this art and do not require excessive experimentation. It is noted that the test for undue experimentation "is not merely quantitative, since a considerable amount of experimentation is permissible, if it is merely routine..." *In re Wands* 858 F.3d 731, 737 (Fed Cir. 1988). Thus, methods for making and evaluating androgen receptor modulator compounds were available and known to skilled artisans at the time of filing the application. Those skills, together with the teaching of the specification, including cited and incorporated references, allow the skilled artisan to

make any and all of the claimed compounds. As discussed, it is not necessary that one skilled in the art be able to predict which compound will be most active for a particular medical application. The specification, in view of the skill in the art, enables one to make and administer, and if necessary test, any claimed compound

CONCLUSION

In light of the scope of the claims, the teachings in the specification, the high level of skill of those in this art, the working examples, and the extensive knowledge of those of skill in this art, it would not require undue experimentation for a person skilled in the art to make and use the claimed compounds and compositions. Therefore, the specification is enabling for making and using the full scope of the claimed subject matter. Applicant respectfully requests that the rejection be reconsidered and withdrawn.

Policy Considerations

The Examiner is reminded that applicant is entitled to claims that are commensurate in scope not only with what applicant has specifically exemplified, but commensurate in scope with that which one of skill in the art could obtain by virtue of that which the applicant has disclosed. Moreover, it is unfair, unduly limiting and contrary to the public policy and constitutional mandate that underlie the U.S. patent system to require applicant to limit the instant claims to the compounds specifically discussed in the examples. To do so permits one of skill in this art to practice the disclosed invention but avoid liability for infringement merely by selecting a species of the disclosed genus not specifically discussed in the examples.

As a broad body of knowledge is available in the area of chemical, it would be unfair, unduly limiting and contrary to the public policy upon which the patent laws are based to require Applicant to limit these claims to the particular exemplary embodiments. See, e.g., *In re Goffe*, 542 F.2d 801, 166 USPQ 85 (CCPA 1970):

for the Board to limit appellant to claims involving the specific materials disclosed in the examples so that a competitor seeking to avoid infringing the claims can merely follow the disclosure and make routine substitutions "is contrary to the purpose for which the patent system exists - to promote progress in the useful arts".

The public purpose on which the patent law rests requires the granting of claims commensurate in scope with the invention disclosed. This requires as much the granting of broad claims on broad inventions as it does the granting of more specific claims on more specific inventions. *In re Sus and Schafer*, 49 CCPA 1301, 306 F.2d 494, 134 USPQ 301, at 304.

To require applicant to further limit the claims would permit those of skill in the art to practice what is disclosed in the specification but avoid infringing claims so-limited. To permit

that is simply not fair. The instant application in light of the knowledge of those of skill in the art provides adequate guidance for making and using androgen receptor modulator compounds and compositions. Having done so, it is now routine for others to make minor modifications by any method known in this art. Those of skill in the art should not be permitted to make minor modifications, such as selecting a compound not specifically disclosed in the examples, to avoid infringing such claims.

Rebuttal to Examiner's Arguments

A. Alleged Excessive Breadth of Claims

The Examiner alleges that the "breadth of the compound claims is excessive," asserting that "the term 'may be optionally substituted' without specifying the substituents implied thereby renders the breadth excessive because said term implies that the unnamed substituents is/are open to all possible alternatives" (Office Action at page 4). Applicant respectfully points out that the term "optionally substituted" is defined in the specification at page 11 line 26 to page 12, line 9, which states:

"Optionally substituted" groups may be substituted or unsubstituted. The substituents of an "optionally substituted" group may include, without limitation, one or more substituents independently selected from the following groups or designated subsets thereof: alkyl, alkenyl, alkynyl, heteroalkyl, haloalkyl, haloalkenyl, haloalkynyl, cycloalkyl, aryl, heteroaryl, arylalkyl, heteroarylalkyl, alkoxy, aryloxy, haloalkoxy, amino, alkylamino, dialkylamino, alkylthio, arylthio, heteroarylthio, oxo, carboxyesters, carboxamido, acyloxy, hydrogen, F, Cl, Br, I, CN, NO₂, NH₂, N₃, NHCH₃, N(CH₃)₂, SH, SCH₃, OH, OCH₃, OCF₃, CH₃, CF₃, C(O)CH₃, CO₂CH₃, CO₂H, C(O)NH₂, OR⁹, SR⁹ and NR¹⁰R¹¹. An optionally substituted group may be unsubstituted (e.g., -CH₂CH₃), fully substituted (e.g., -CF₂CF₃), monosubstituted (e.g., -CH₂CH₂F) or substituted at a level anywhere in-between fully substituted and monosubstituted (e.g., -CH₂CF₃).

Thus, the claims are not unbound as the Examiner asserts. Applicant respectfully requests that the Examiner reconsider the rejection in view of the above.

B. Nature of the Invention

The Examiner alleges that the "nature of the invention includes a method of testing, a method of purification, and a vast number of methods of medicinal treatment" (Office Action at page 4). Applicant respectfully submits that it does not constitute undue experimentation to make, test, and administer any compound of the invention. It is not necessary that one skilled in the art be able to predict precisely which compounds will be the most active for a given disease, because testing compounds in a screening assay, such as the binding assay or the co-transfection assay, both of which are described in the specification, does not constitute undue

experimentation. Indeed, synthesizing and testing compounds is analogous to the process of making and screening antibodies, which the Federal Circuit found not to be undue experimentation. *In re Wands* 858 F.3d 731, 8 U.S.P.Q.2d 1400.

C. Specific Disease Conditions

The Examiner alleges that there is no clear showing that compounds that are active as androgen receptor modulators (agonists or antagonists) are actually effective in the treatment of any specific disease condition Office Action page 5). The Examiner requests copies of any art bearing on this topic.

Applicant respectfully submits that at the time of filing the application, use of androgen receptor modulators, such as agonists or antagonists, as therapeutic agents was known to those skilled in the medical arts. For example, Singh *et al.* (*Current Medicinal Chemistry* (2000) 7: 211-247) teaches that benign prostatic hyperplasia, acne, seborrhea, hirsutism and androgenic alopecia are all well recognized to be sensitive to androgens and to respond to androgen receptor antagonist therapy (page 211, first paragraph). Boyer (*Australian Prescriber* (1996) 19: 22-24) teaches that steroidal and non-steroidal antiandrogens are used in the hormonal management of prostate cancer and as part of total androgen blockade. Claman *et al.* (*J Obstet Gynaecol Can* (January 2002) 24(1): 62-67) teaches androgen suppression and/or androgen receptor blockade for medical treatment of hirsutism and the associated diseases hyperandrogenism and adult-onset congenital adrenal hyperplasia. Copies of these articles are supplied herewith. Thus, there is a clear showing in the art that compounds that are active as androgen receptor modulators are actually effective in the treatment of *many* specific disease conditions.

D. Alleged Limited Direction

The Examiner states that the amount of direction provided is limited to the chemical synthesis of numerous [1,4]oxazino[2,3-*f*]quinolin-8-ones and data identifying which compounds are agonists or antagonists and alleges that no other chemical species has been disclosed as having been synthesized, isolated or subjected to any testing to determine possible medicinal activity. Applicant respectfully disagrees.

The specification teaches seven generic synthesis schemes (for example, see page 33, 35, 37, 38, 39, 41 and 42). The application names over 150 exemplary AR modulator compounds (for example, see page 29 through 32 and claims 56 and 57). The specification also provides over 50 working examples and two screening assays. It is respectfully submitted that the direction provided by the specification is sufficient to allow one of skill in the art to synthesize, test and administer any and all compounds of the claimed subject matter. One

skilled in the art will recognize that the generic schemes may be used to synthesize such compounds, though they may also be synthesized using techniques known to those of skill in the art. Similarly, one of skill in the art may assess certain compounds of the present invention using the binding assay or the co-transfection assay, both of which are disclosed in the specification, though one of skill in the art may assess compounds using other known assays. Finally, administration of compounds is routine to one of skill in the medical arts.

E. Alleged Lack of a Showing of Efficacy of Treatment of a Specific Disease

The Examiner alleges that the specification provides biological testing limited to the compounds noted in the Examples and that the testing was limited "to showings of agonist or antagonist activity in the presence of a receptor, but no showing of efficacy in the treatment of any one of the specific disease conditions listed" (Office Action page 5). The Examiner also states that applicant has shown that the disclosed compounds have potential utility in the treatment of disease conditions where an androgen-sensitive receptor is implicated but contends that there has been no showing that any particular disease may be effectively treated using any claimed compound (Office Action pages 5-6).

Applicant is not aware of any requirement under current U.S. patent law specifying particular minimum levels of optimization and certified efficacy in order for an area of art to qualify as sufficiently "predictable" such that lack of enablement under 35 U.S.C. § 112, first paragraph, is not a consideration. The relevant standard is not that of an established, fully optimized, method; rather, even in an unpredictable art, a patent application satisfies the requirements of 35 U.S.C. § 112, first paragraph, as long as it provides sufficient disclosure, either through illustrative examples or terminology, to teach those of skill in the art how to make and use the claimed subject matter without undue experimentation. The teachings of Evans *et al.* (US Pat. Nos. 4,981,784 and 5,071,773 and *Science* 240:889-95 (1988)) describe a co-transfection assay that mimics an *in vivo* system in the laboratory. Elbrecht *et al.* (U.S. Pat. No. 5,872,150) discloses assays for identifying compounds with antiandrogenic activity employing a hamster ductus deferens cell line. Raynaud *et al.* (*J. Steroid Biochem.* 12:143-157 (1980)) describes a number of steroid hormone receptor competition assays. Tanabe *et al.* (U.S. Pat. No. 5,723,455) describes a rat prostate androgen receptor competition assay for *in vitro* evaluation of androgen receptor modulator compounds. These references support the teachings of the specification and demonstrate the knowledge of those of skill in the art at the time the application was filed. These references also provide evidence that those of skill in this art correlate activity in the assays with pharmacological activity. Furthermore,

compounds that have shown activity in these assays (see, e.g., U.S. Patent No. 6,043,279) have shown activity in clinical trials and are now recognized therapeutics.

One of skill in the art would recognize that the assays described in the references and the specification are useful in assessing certain compounds including those presently claimed in the treatment of disease conditions where an androgen-sensitive receptor has been implicated. As discussed above, a number of diseases, including benign prostatic hyperplasia, prostate cancer, acne, seborrhea, hirsutism, hyperandrogenism, adult-onset congenital adrenal hyperplasia and androgenic alopecia, are recognized to be sensitive to androgens and to respond to androgen receptor antagonist therapy. Therefore, compounds that are androgen receptor antagonists, for example, are candidates for clinical use in the treatment of diseases that respond to androgen receptor antagonist therapy.

REJECTION OF CLAIMS 1-7, 9, 11-18, 20, 21, 23-36, 39, 41, 45, 49-51, 56-58, 60-74, 76, 77 AND 86-107 UNDER 35 U.S.C. § 112 SECOND PARAGRAPH

Claims 1-7, 9, 11-18, 20, 21, 23-36, 39, 41, 45, 49-51, 56-58, 60-74, 76, 77 and 86-107 under 35 U.S.C. § 112 second paragraph as allegedly being indefinite for failing to particularly point out and distinctly claim the subject matter. This rejection is respectfully traversed.

RELEVANT LAW

Claims are not read in a vacuum but instead are considered in light of the specification and the general understanding of the skilled artisan. *Rosemount Inc. v. Beckman Instruments, Inc.*, 727 F.2d 1540, 1547, 221 USPQ 1, 7 (Fed. Cir. 1984), *Caterpillar Tractor Co. v. Berco, S.P.A.*, 714 F.2d 1110, 1116, 219 USPQ 185, 188 (Fed. Cir. 1983). A claim is not indefinite when one skilled in the art would understand the language in the claims when read in light of the specification.

35 U.S.C. § 112, second paragraph requires only reasonable precision in delineating the bounds of the claimed invention. Claim language is satisfactory if it reasonably apprises those of skill in the art of the bounds of the claimed invention and is as precise as the subject matter permits. *Shatterproof Glass Corp. v. Libby-Owens Ford Col.*, 758 F.2d 613, 624, 225 USPQ 634, 641 (Fed. Cir.), cert. dismissed, 106 S.Ct. 340 (1985).

A. Alleged Incomplete Recitation

The Examiner rejects claims 1-7, 9, 11-18, 20, 21, 23-36, 39, 41, 45, 49-51, 56-58, 60-74, 76, 77, 85, 86, 89, 90, 93, 94, 101 and 102 because the recitation "selected from the group of" allegedly is incomplete because the Examiner urges that Markush groups are

properly formatted using the phrase "selected from the group consisting of" (Office Action at page 6). While use of the term "comprising" instead of "consisting" is not allowed, alternative wording is permitted. MPEP 2173.05(h) (noting that Markush group claims "may be recited in the traditional manner, or alternatively."). The recitation "selected from the group of" reasonably apprises those of skill in the art of the bounds of the claimed subject matter. Hence, the claim language is acceptable. Further, the phrase "selected from the group of" is closed to additional members and, thus, permitted.

B. "Optionally Substituted"

Claims 1-7, 9, 11-18, 20, 21-25, 27-29, 30, 32, 35, 36, 49, 50, 58, 60-62, 64-71, 73 and 74 are rejected because the recitation "may be optionally substituted" is allegedly incomplete because it allegedly fails "to specify the substituents implied thereby." Office Action at pages 6-7. This rejection is respectfully traversed.

As noted above, the term "optionally substituted" is defined in the specification at page 11, line 26 to page 12, line 9, which recites:

"Optionally substituted" groups may be substituted or unsubstituted. The substituents of an "optionally substituted" group may include, without limitation, one or more substituents independently selected from the following groups or designated subsets thereof: alkyl, alkenyl, alkynyl, heteroalkyl, haloalkyl, haloalkenyl, haloalkynyl, cycloalkyl, aryl, heteroaryl, arylalkyl, heteroarylalkyl, alkoxy, aryloxy, haloalkoxy, amino, alkylamino, dialkylamino, alkylthio, arylthio, heteroarylthio, oxo, carboxyesters, carboxamido, acyloxy, hydrogen, F, Cl, Br, I, CN, NO₂, NH₂, N₃, NHCH₃, N(CH₃)₂, SH, SCH₃, OH, OCH₃, OCF₃, CH₃, CF₃, C(O)CH₃, CO₂CH₃, CO₂H, C(O)NH₂, OR⁹, SR⁹ and NR¹⁰R¹¹. An optionally substituted group may be unsubstituted (e.g., -CH₂CH₃), fully substituted (e.g., -CF₂CF₃), monosubstituted (e.g., -CH₂CH₂F) or substituted at a level anywhere in-between fully substituted and monosubstituted (e.g., -CH₂CF₃).

It is respectfully submitted that one skilled in the art would understand the language in the claims when read in light of the specification. As shown above, the meaning of the recitation "optionally substituted" reasonably apprises those of skill in the art of the bounds of the claimed subject matter. Applicant respectfully requests that the Examiner reconsider the rejection in view of the above.

C. Inadvertant Omission

Claim 61 is rejected because of the inadvertent omission of the term "comprising a compound." Applicant thanks the Examiner for pointing out this error, which is corrected herein. Thus, the rejection is now moot.

D. Claims 87-107

Claims 87-107 are rejected because the Examiner alleges that the term "modulate" is "indefinite for failing to indicate what specific treatment action(s) or effect(s) is(are) intended." It is respectfully submitted that the specification specifically states that "in one aspect, the modulation is activation, while in another aspect, the modulation is inhibition" (see, for example, page 17, lines 4-5). This is in keeping with the use of the term "modulators" throughout the specification, which refer to "compounds that are agonists, partial agonists or antagonists" (see page 1, lines 25-26), where "a compound that binds an IR [intracellular receptor] and mimics the effect of the native ligand is referred to as an "agonist", while a compound that inhibits the effect of the native ligand is called an "antagonist." Thus, when read in light of the specification, one skilled in the art would understand the meaning of the term "modulate" in the claims.

REJECTIONS UNDER 35 U.S.C. § 102

Claims 1-7, 9, 11-14, 16-22, 27, 28, 37, 41, 42, 53, 58-62, 64, 66-68, 73, 75, 80, 82 and 85-107 are rejected as allegedly anticipated by U.S. Pat. Nos. 6,030,967 and 6,340,704 to Marui *et al.* Without acquiescing to the Examiner's allegation and solely to expedite prosecution, claims 1, 32, and 50 are amended herein. Amended claims 1, 32, and 50 are not anticipated by the two Marui *et al.* patents. The remaining rejected claims ultimately depend from those claims. Thus, the rejections under 35 U.S. C. § 102 are moot.

* * *

In view of the above, reconsideration and allowance is respectfully requested.

Respectfully submitted,

Stephanie Seidman

Dear Mr. Thompson:

Enclosed is a Declaration for Patent Application for your execution. The above-captioned patent application was prepared and filed with the U.S. Patent and Trademark Office on February 22, 2002. This patent application has been deemed allowable. The Examiner has required a replacement Declaration because the hand-annotated address changes made by one of the inventors was not initialed on the originally submitted Declaration.

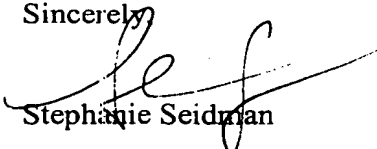

We also have enclosed a copy of the application as filed with the U.S. Patent and Trademark Office for your review. Also enclosed are copies of the Amendments that have been filed during prosecution of this patent application. Please review the application and the amendments.

After reviewing the application and the amendments, please sign and date the enclosed Declaration for Patent Application and return the executed document to our office as soon as possible. For your convenience we have enclosed a stamped, self-addressed envelope for use in returning the executed document to us.

In the event that the enclosed Declaration for Patent Application is incorrect in anyway, please mark through the error(s), type or print the correction(s) above it, and then **initial** and **date** in the margin beside the correction(s).

We would appreciate the prompt execution and return of the enclosed Declaration for Patent Application. If you have any questions, please do not hesitate to contact our office.

Sincerely,

Stephanie Seidman

DECLARATION FOR PATENT APPLICATION

As below-named inventors, we hereby declare that:

Our residences, post office addresses and citizenships are as stated below next to our names.

We believe we are the original, first and joint inventors of the subject matter which is claimed and for which a patent is sought on the invention entitled

**TRICYCLIC QUINOLINONE AND TRICYCLIC QUINOLINE ANDROGEN
RECEPTOR MODULATOR COMPOUNDS AND METHODS**

the specification of which:

() is attached hereto.

(X) was filed by an authorized person on my behalf on February 22, 2002 as Application Serial No. 10/080,503

(X) was amended on January 31, 2005, November 3, 2005, May 19, 2006, and by Examiner's amendment of July 11, 2006.

We hereby state that we have reviewed and understand the contents of the above-identified specification, including the claims, as amended by any amendment referred to above.

We acknowledge the duty to disclose information which is material to the examination of this application in accordance with Title 37, Code of Federal Regulations, §1.56(a).

We hereby claim foreign priority benefits under Title 35, United States Code, §119(a)-(d) or §365(b) of any foreign application(s) for patent or inventor's certificate listed below and so identified, or §365(a) of any PCT international application that designated at least one country other than the United States of America, listed below, and we have also identified below any foreign application for patent or inventor's certificate or PCT international application on this invention filed by us or by legal representatives or assigns and having a filing date before that of the application on which priority is claimed.
